

This small device will protect all your smart home devices

CUJO Smart Internet Security Firewall is a firewall device that helps protect all smart devices.

The idea of smart home is when all devices will connect with each other through the Internet, communicate with each other and change according to the user's settings, creating a new era of convenience. We are not far from that prospect anymore.

No smart home appliance is really 'smart' without proper protection to prevent hackers from taking over the device. That's why CUJO Smart Internet Security Firewall is such an important step. This device is committed to ensuring the safety of all devices connected to the Internet in your home.

CUJO possesses a friendly 'face', protects all connected devices, whether computer or router, against being violated by malware, phishing scams. Simple setup steps by machine learning protocol help identify the device and automatically set up a firewall for them.

CUJO not only protects your network, it also provides security solutions that suit user needs. The mobile application allows users to control all devices from anywhere, receive notifications when a threat is detected,

allowing access when you add new devices to the network. You can also set up child monitoring, scheduling, time limits to protect children's equipment. If you want to remove these restrictions, users can hijack devices or content that has been blocked at any time.

The price to buy and use a lifetime device costs \$ 249 but today you can buy for only \$ 224.99.
