

This website can turn your youthful selfie into a classic portrait of ghosts

Turn your selfie photos into ghostly old portraits, post on Facebook and make your friends admire.

Are you tired of using AI on FaceApp to make your face become wrinkled and ugly? So why not try to do the opposite, to turn your selfie photos into ancient portraits full of ghosts, post on Facebook and make your friends admire? An interesting website called aiportraits.com will help you do that.

Yes, it is worth mentioning that all your operations will be done online, you do not need to download the application to your computer to edit photos as usual, but also reduce some privacy concerns. Moreover, aiportraits.com is a unique innovative product, built by researchers at AI-MIT Watson Laboratory (MIT-IBM Watson AI Lab), affiliated to Massachusetts Institute of Technology (MIT), So you can feel secure when uploading your photos to the website to test an exciting artistic transformation for yourself.

1. AI drew caricatures from the extreme snapshot

Classic-style photos are edited on aiportraits.com

Basically, this site uses an artificial intelligence algorithm, trained on 45,000 classic portraits to transform your face in modern selfie pictures into oil paintings, colors water or ink . true to the classic style often seen in art history from time to time.

In addition, there are many styles and schools already integrated in the database of the site you can choose from, including a series of 'legendary' painters, from Rembrandt, Titian to Van Gogh. Each person has their own artistic imprints, you just choose and create your own unique portrait to show off to everyone.

1. Samsung's Deepfake could make dark monk Rasputin sing like a real thing

There are many different styles to choose from

As explained by researchers from the MIT-IBM Watson AI Lab, the difference of AI algorithms used on aiporraits.com compared to other AI models lies in: 'While most methods Previous AI often created similar portraits, the algorithm here is not just about transforming your face in a new style. Instead, it uses a more advanced technology, called generative adversarial network (GAN) to create new details from the beginning. Therefore, each newly created photo will be a completely separate work, not "touching".

Some of the common elements in selfie images can affect how AI algorithms choose a specific 'style'. For example, in the pictures below, the researchers say their algorithm has decided to correct the Renaissance-style picture, highlighting the elegance of the nose and skin, and smoothness of the forehead. If you try a few different selfies, you will definitely get different results. That is the interesting point of this AI model.

1. Japan's artificial intelligence has created ultra-realistic virtual fashion models

You can "temporarily" have privacy when editing photos on this website

For worries about privacy-related impacts (like some warnings about unauthorized use of user image data that has been rampant for FaceApp applications that are hot recently), you may be somewhat assured when experiencing the website aiportraits.com. The team did not conceal any information about the image processing process. Once uploaded to the website, your photos will be sent to the server of MIT-IBM Watson AI Lab to create new style portraits. Researchers have pledged that they will not use your data for any other purpose, and that any images you send to the server are deleted immediately after the editing process is complete. socks.

However there is one thing to note: After the AI ??'portraits' for you, the 'youthful' features in your face will be frozen forever, ie the image will no longer be usable. usable at the next image correction. When selecting to save to the device, the image will appear in the download section (by default).

1. Admire Nvidia's new AI application: Turn MS Paint-style doodle into an artistic 'masterpiece'

Portrait of Elon Musk after revising to revival style: Handsome is real!

I tried and found it 'pretty'. This is also a gentle way of thinking after hours of studying and working hard!
