

This website will help you constantly update the situation of Wuhan pneumonia worldwide

The outbreak of acute pneumonia caused by corona virus (Wuhan flu) is unpredictable.

The outbreak of coronary pneumonia (Wuhan pandemic) is unpredictable with thousands of infections worldwide, hundreds of deaths (in China), and 23 countries with confirmed people positive for this new strain (as of 12:30 on January 31). The situation became so complicated that the WHO World Health Organization had to meet and make a declaration of the nCoV pneumonia epidemic as an "international emergency medical condition".

Another problem that is causing headaches for the authorities is the fact that fake information about the actual situation of the disease is spreading rapidly on social media, causing unwarranted confusion in the community. In order to provide accurate, reputable information and give global people a better overview of the spread of corona virus in real time, the Center for Science and Systems Engineering (CSSE) is headquartered in Johns Hopkins, Maryland, USA, they have been speeding up the development and introduction of an online statistical website, collecting data on diseases collected from a number of official agencies including WHO as well as testing centers disease control and prevention in China, the USA and Europe.

Concerns about a new strain of corona virus may be more difficult to control than the initial assessment appeared on Sunday, after Chinese National Health Minister Ma Xiaowei said the time The incubation period can last up to 14 days, and during this period the virus can still be transmitted directly from person to person through the respiratory tract, ears, and eyes, leading to infection control. spread of disease becomes extremely difficult.

While a global emergency has been issued by the WHO, the organization says there is no reason to ban global travel, and welcomes Beijing for taking swift action. translation control.
