

# Thousands of thousands of dollars in the interior of the Galaxy Note 9 have just been released

Last night (August 9, 2018) Galaxy Note 9 has just been officially launched and immediately the Russian blog named Hi Tech Mail Ru has opened the device to see 'interior inside this \$ 1,000 smartphone.

Last night (August 9, 2018) the Galaxy Note 9 has just been officially launched and immediately the Russian blog named Hi Tech Mail Ru has opened the device to see 'interior' inside this thousand-dollar smartphone.

The most noticeable point on the Note 9 is the radiator system called 'water-carbon', which has water inside, the heatpipe is made of copper with impressive size that can match the system. heat dissipation on a notebook This new Samsung cooling system makes the machine's temperature drop by more than 21% compared to conventional cooling systems.

According to the evaluation of Hi Tech Mail Ru, the slot containing the S Pen on the Note 9 is stronger than the Note 8. In addition, the Note 9 motherboard is slightly smaller than the Note 8 but the size of the speaker is bigger This helps to make the sound quality bigger and better.

USB-C ports and separate motherboards make it more difficult and easy to replace and repair when damaged.
