

Tiny computers cost only VND 440,000

Raspberry Pi (USA) continues to surprise when it has just announced a motherboard (actually a form of microcomputer) that is fully integrated with the connection and costs only 20 USD (about 440,000 VND). .

Raspberry Pi (USA) continues to surprise when it has just announced a motherboard (actually a form of microcomputer) that is fully integrated with the connection and costs only 20 USD (about 440,000 VND). .

Raspberry Pi A + is full of connection ports to become a microcomputer model

According to *Neowin* , this computer model is called the *Raspberry Pi A +* which is considered an upgrade from the *Raspberry Pi A* model sold by the company.

Raspberry Pi A + is about 30% smaller (*in length*) than the Raspberry Pi A. In particular, this product has a length of about 65 mm and is designed as a simple motherboard.

However, this motherboard is fully integrated with the tools to become a microcomputer including: ARM processor, a USB port, a speaker jack, an HDMI port (*for export image*) , microSD card slot (*used for storage capacity*) , 256 MB built-in RAM.

In addition to the *Raspberry Pi A + version* , this manufacturer also has a Raspberry Pi B version with the same configuration but is equipped with 512 MB RAM memory and has an Ethernet port to connect to the network. However, the size of the Raspberry Pi B model is almost twice as large as the Raspberry Pi A + version and has

a price of 35 USD.

You can watch the video clip showing the Raspberry Pi A + microcomputer model here!
