Features of TinyTask

Automate repetitive processes within a few clicks

TinyTask is a simple, easy to use application. Like other complex programs, this tool does not require you to have technical skills or programming knowledge. With this lightweight application, you can easily automate tasks on your PC. All you need to do is record the screen and the application will automatically create a specific macro. Then you can easily repeat the action at any time. Like MacroMaker, TinyTask consists of a single screen, with an intuitive and simple interface.

Easy to use

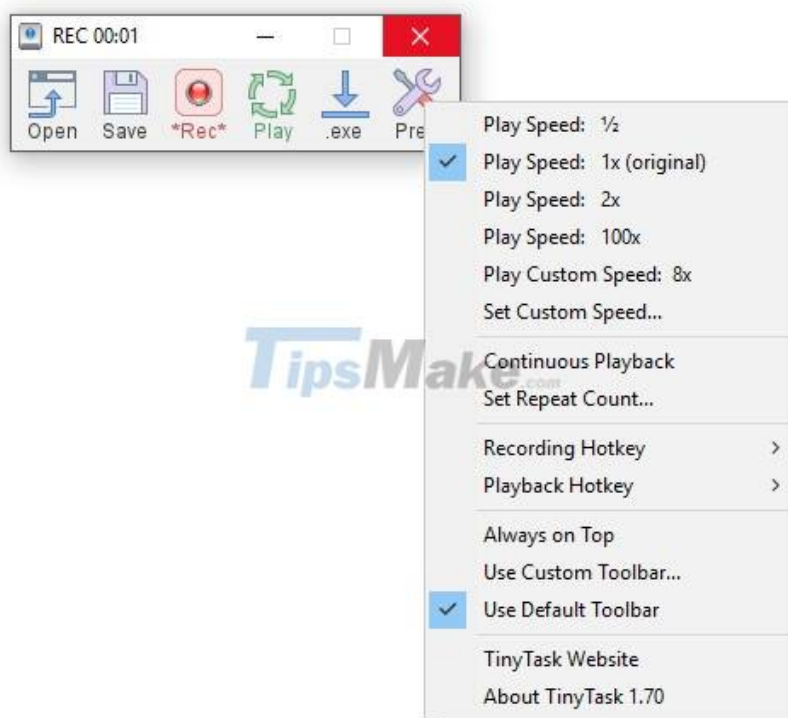

As mentioned earlier, with an intuitive, simple and clean interface, anyone can start using the app right away. To create macros, you don't need any experience. In addition, the application may continue to run in the background. So you can stay focused on other important tasks. Everything was displayed in large buttons in a

single row. Therefore, even though the app doesn't come with comprehensive instructions or an informative "Help" section, it is still not confusing for beginners.

To start recording a task, simply click the "Record" button. This tool automatically records everything on the screen, including navigating a web page, opening a folder or file, and even complex actions. Once the screen recording is done, you can stop the process and click 'Play'.

TinyTask repeats every action you take on the screen. If you find that the recording is satisfactory, you can click Save, and then name the macro file. Whenever you want to repeat recorded tasks, you can use saved macros. You need to click the Play button and watch the mouse pointer on the screen move to perform the process.

In case the media player automatically starts playing the file, you can close the file with the X button and select TinyTask from the Open With option. You can even let the computer choose this option by default, which ensures the media player doesn't automatically start playing macros.

In short, TinyTask can save you a significant amount of time that you would have spent on repetitive tasks. This is a lightweight program that does not require a lot of system resources. With minimal CPU and memory usage, TinyTask provides easy and fast automation for Windows computers. You just need to record to create a macro, then execute it with a keyboard shortcut. While performing repetitive processes, TinyTask is a useful tool to reduce clicks and manual work.
