

# Tips and tricks on iPhone computer application

The iPhone Calculator application has many tips to help you use it more effectively with computing and learning tasks.

Maybe you have never used the default computer application on your iPhone or simply used it to add and subtract normally. However, in fact, this computer application is not only a plus and minus as you use but it also contains many interesting features for you to explore and use. In this article, Network Administrator will teach you some good tips and tricks on the computer application you can apply on your iPhone.

## Tips and tricks on computer applications for iPhone

### Swipe to delete digits

If in the process of use, you accidentally press the wrong number, instead of pressing the C button to start the press again, you can swipe on the screen left or right, the application will automatically delete the entry number you recently entered. so that you can enter the calculation again.

### Copy paste

You can also easily copy any result or digit. You just need to press and hold on the phone screen, this time the screen will display the copy, now you copy the results and send it easily without remembering too complicated.

### Multipurpose computer

There is also a more versatile computer built into the original app on the iPhone. To open, you simply activate the screen rotation mode and place the iPhone horizontally. The Computer Application will now provide a full range of functions and calculations for you to serve your studies and work.

Hopefully with a few small tips above, you will be able to use computer applications more efficiently.

Hope you are successful.
