

Tips for charging your phone when the laptop is in Sleep Mode

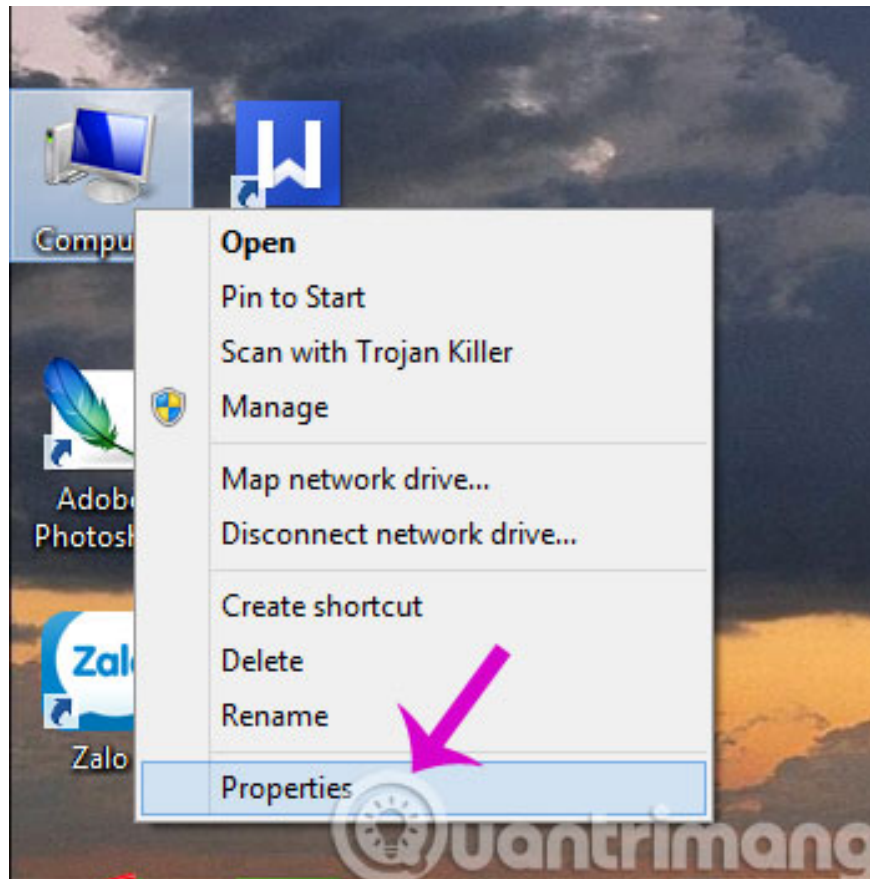

Currently, many people often charge their phones via the USB port of a laptop because they can both work on computers and put smartphones under their control. But there is a small problem if you have to go out for a while and leave the laptop in Sleep Mode, the phone will stop charging immediately.

Currently, many people often charge their phones via the laptop's USB port because they can both work on computers and put smartphones in "control" of themselves. But there is a small problem if you have to go out for a while and leave the laptop in Sleep Mode, the phone will stop charging immediately.

Today, we will share with you a little trick that makes your phone battery still charging even when the laptop is in Sleep Mode. Please consult with us.

Note : This method only applies to computers running **Windows 7** onwards.

Step 1 : Right-click **Computer** and select **Properties**

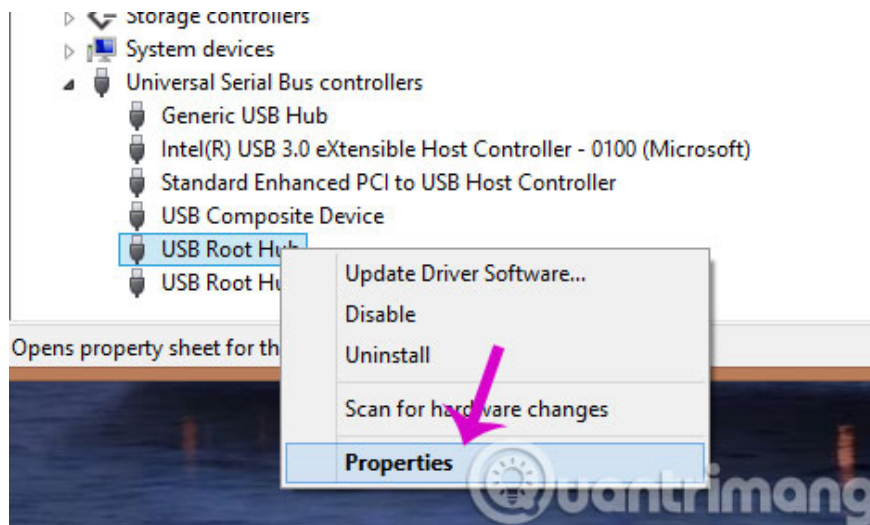

Step 2 : When the new window opens, click **Device Manager**

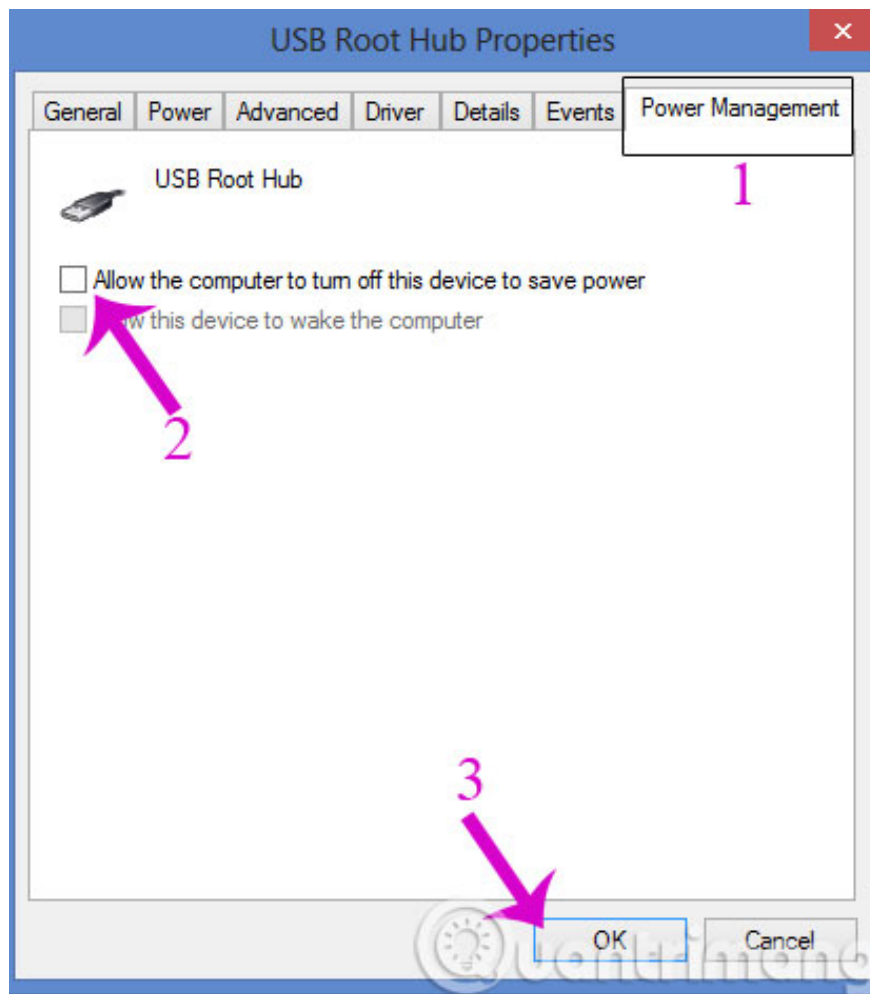

Step 3 : In the **Device Manager** dialog box, scroll down to find the **Universal Serial Bus controllers** section and click the arrow to pop out the items in it.

Step 3 : Here, right-click on the subfolder named **USB Root Hub** and select **Properties**

Step 5 : When the **USB Root Hub Properties** dialog box appears, select the **Power Management** tab and then uncheck the box **Allow the computer to turn off this device to save power** . After that, close the windows.

The above are simple steps to make the laptop unable to "interrupt" the charging process for your smartphone.

1. Some ways to use iPhone battery effectively
2. These battery saving apps on Android
3. Room, avoid and cure the phone when the battery bottle
