

# Tips for creating a moving iPhone lock screen wallpaper effect

Besides Liquid Glass in iOS 26, which completely changes the device's interface, Apple has also added 3D effects to your lock screen wallpaper with the incredibly unique Spatial Scenes.

Besides Liquid Glass in iOS 26, which completely changes the device's interface, Apple has also added a 3D effect to your lock screen wallpaper with the unique Spatial Scenes. When you tilt your phone, the wallpaper moves in a very unusual way. Below is a guide on how to enable Spatial Scenes on iOS 26.

## What is Space Scene in iOS 26?

Spatial Scenes is a new feature in iOS 26 that adds depth and motion to still images. When you tilt or move your iPhone, the image shifts slightly, making it look like you're looking at a 3D scene instead of a flat picture. This feature separates the foreground and background and makes them move based on the phone's movement.

Apple uses on-device AI and the Neural Engine to analyze image depth. Interestingly, this feature doesn't rely on the new Apple Intelligence system. So, even without the latest iPhone with a full AI suite, you can still access this feature if your device supports iOS 26.

## How to enable Space Scenes on iOS 26

### Step 1:

We tap **on the image we want to set as wallpaper**, then tap **the share icon** below. Next, tap " **Use as wallpaper**" .
