

Tips for creating your own custom Dino Chrome game with GenDino

Google launches custom Dino Chrome game generator with GenDino. GenDino is a Google Labs experimental program that utilizes AI imaging models to create custom characters, enemies, and other elements in the game.

We just need to enter the characters we want to display in Dino Chrome and GenDino will create them later. Below are instructions for creating a Dino Chrome game on GenDino.

How to create your own Dino Chrome game on GenDino

Step 1:

Click on the link below to access GenDino. We can use computers or phones, no need to use Chrome browser.

At this interface, **click Sign in with Google** to log in to the website with your Google account.

Step 2:

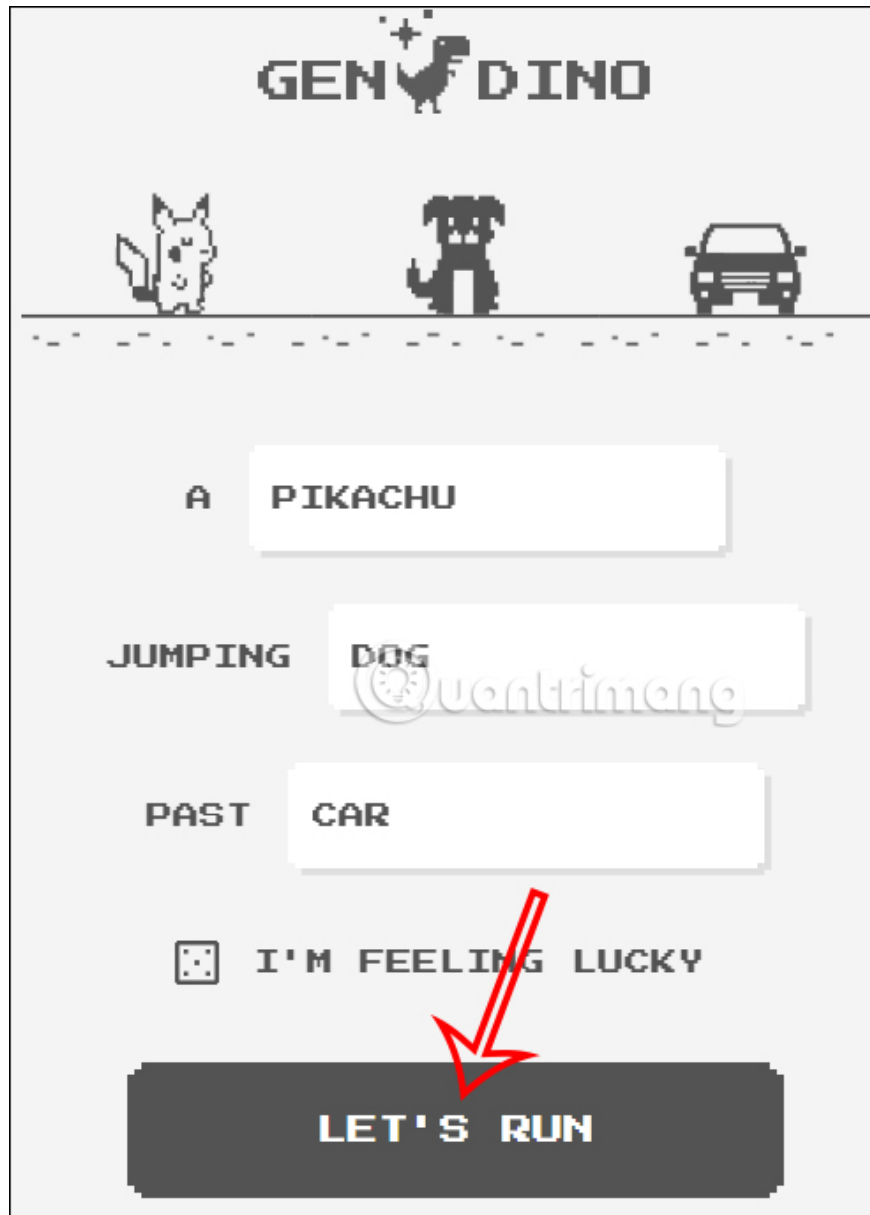

Displays the interface for you to manually import characters into the game.

For example, change **the dinosaur character to pikachu character** , in frame A, enter pikachu and press the arrow icon next to it to create a new character for the Dino Chrome game.

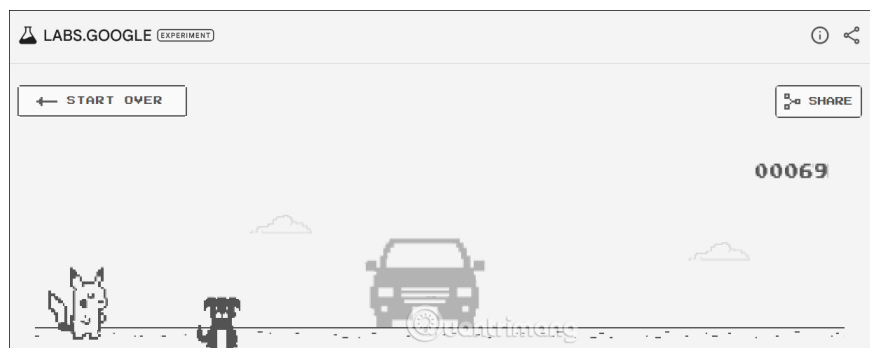

You will immediately see the new character changed. We continue to fill in other characters or models in the remaining lines. Finally **press Let's run** to experience the game.

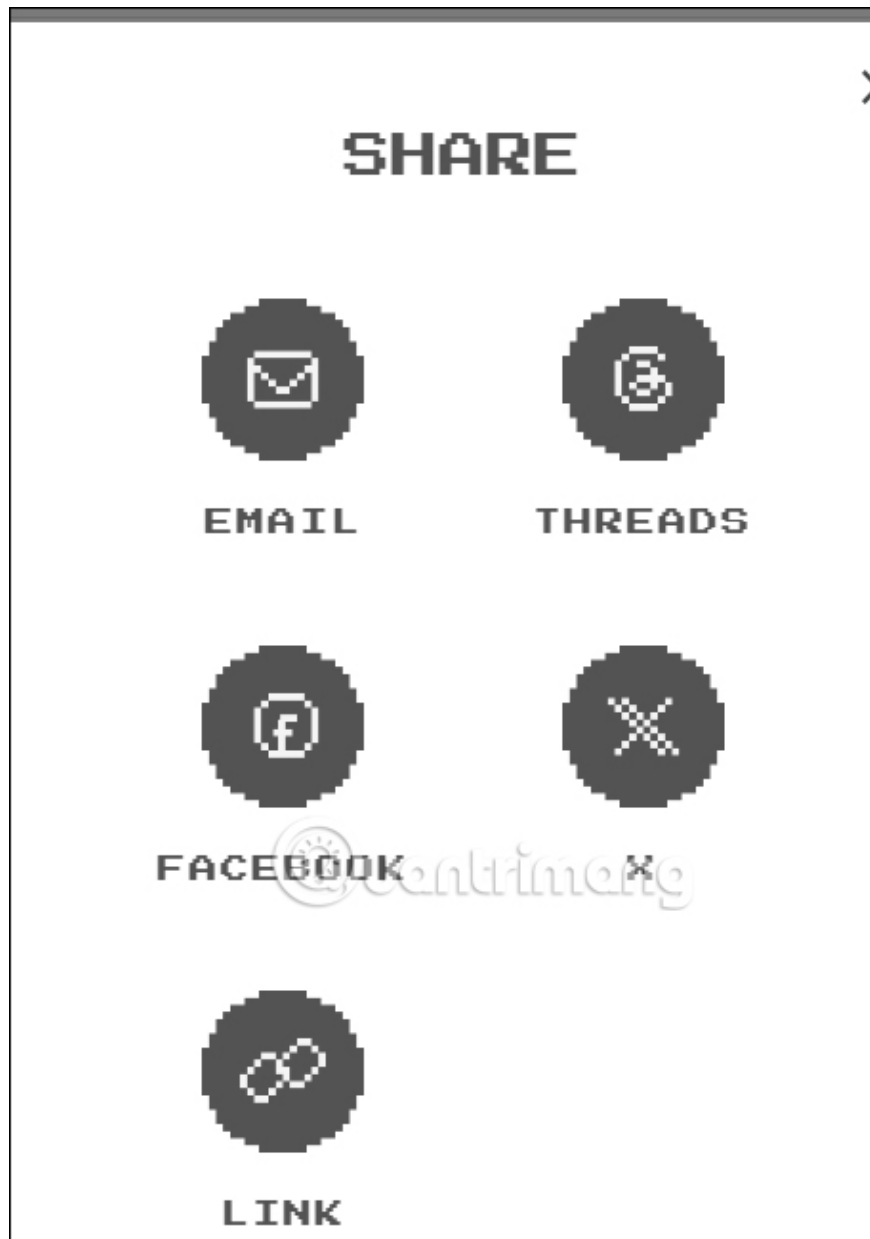

Step 3:

Dino Chrome gaming interface with characters and details you create yourself as shown below. The gameplay is similar to when playing dinosaur games, jump up to avoid obstacles on the way.

Click on **the share icon** and you have the option to share this game with others, through supported applications on GenDino.
