

Tips for using the Ice Fruit in Blox Fruit

The Ice Devil Fruit is one of the ways to help your character deal good damage in Blox Fruit.

Entering **the Blox Fruit code** can help you get the Ice Fruit in the game, which doubles experience points, doubles the time it takes to earn money, and removes character stats that you incorrectly add, or similar effects.

The Ice Devil Fruit is one of the ways to help your character deal good damage in Blox Fruits. It's an elemental Devil Fruit, currently costing around 350,000 or 750 Robux. You can buy it in the Devil Fruit shop or obtain it through the Blox Fruits Gacha. It was added in the first update. This Devil Fruit has a 15% chance to appear in the inventory every 4 hours and a 14% chance every 1 hour. It requires a total of 14,500 Robux to fully awaken. Here are a few tips if you're playing with the Ice Fruit in Blox Fruits.

The Ice Fruit's skill set in Blox Fruit

Intrinsic

1. **Elemental Reflection:** The user is immune to all physical and sword attacks as long as the attacker does not have an Aura.
2. **Walking on Ice and Snow:** Users can walk on Water by freezing it beneath them. However, it consumes a significant amount of energy if moving quickly. It takes 4 energy for each block of ice created.
3. **Ice Trident:** Similar to Light, if Ice is selected, the user can slash with an ice trident by left-clicking. Also like the Light Spear, adding points to "Sword" in the stats will not increase damage because this trident counts as a Devil Fruit attack.

Activated skills are not yet awakened.

1. **Ice Spear - 1 Proficiency:** The user fires a barrage of ice shards that damage enemies. (Does not disrupt Observation Haki unless it touches the ground).
2. **Ice Slash - 25 Mastery:** The user unleashes a small stream of ice that deals damage and knocks back anyone hit. Requires minimal targeting skills. (Instinct Breaker).
3. **Ice Bird - 50 Mastery:** The user creates an ice bird and throws it at a location in the direction of the mouse cursor, freezing players hit and exploding on contact. The freezing duration is based on the projectile's travel time before impact. Requires good aiming skills. (Does not break Observation Haki).
4. **Ice Age - 100 Mastery:** Transforms the ground into ice, freezing and damaging anyone who steps into the frozen area. Often used by those who use swords and guns as their primary combination starter. (Breaks Observation Haki).

The skill set has been awakened.

1. **Storm - 1 Mastery - 500 Mirror Shards:** The user fires a storm that moves slowly toward the mouse cursor. Upon contact with an enemy, it slowly deals damage and stuns the enemy for the duration of their movement (a few seconds). This move can sometimes break Observation Haki.
2. **Super Ice Shard - 25 Mastery - 3000 Mirror Shards:** The user unleashes a massive stream of ice, triggering a counterattack and dealing damage. (Breaks Observation Haki).
3. **Ice Dragon - 50 Mastery - 4000 Mirror Shards:** The user unleashes a massive ice dragon at high speed into the air, which then plunges down in the direction of the cursor, dealing damage and freezing the opponent.
4. **Absolute Zero - 100 Mastery - 5000 Mirror Shards:** The user unleashes a medium-to-large wave of ice around themselves, freezing everyone within its radius and dealing damage. (Used for high usability in the air before enhancement).

5. **Ice Skating - 0 Mastery - 2000 Mirror Fragments:** Along with the innate ability to walk on water, the user gains the ability to ice skate at high speed. The user cannot regenerate health and energy while using this skill. When you unlock this skill, the ice patterns under your feet when you walk on water will turn a brighter blue and it will emit more light, making it brighter than the previous version.

Pros and cons of Blox Fruit

Advantage:

1. It's a great Devil Fruit for leveling up.
2. It comes with an ice trident but is not affected by the same stats as a regular sword because it counts as part of a fruit similar to the Light Fruit.
3. The box is good because both V1 and V2's ultimate abilities have a wide radius.
4. It's incredibly stunning, as most of its abilities can freeze opponents.
5. Elemental Devil Fruits (good for leveling up due to their immunity and stun abilities).
6. Excellent mobility, thanks to ice skating skills.
7. Ice can walk on water, meaning that for someone who ate the Ice Fruit, boats are no longer very useful. However, it consumes a lot of energy when dodging or using Ice Slide.
8. Good strike combo
9. Multi-target attack skill set.
10. Stun is very useful for Raid, Boss fights, and crushing NPCs.
11. Super Ice [X] can easily break Observation Haki, and this move is also very easy to take down other players, so it's great for PvP.
12. Storm [Z] deals decent damage and stuns for a few seconds, allowing you to combine it.

13. Absolute Zero [V] has a large damage range and good damage output, and it also stuns enemies, making it one of the most dangerous abilities in the game.
14. Ice Dragon [C] has good range and decent damage, and like V, it also stuns enemies so you can combine it with V, Z, X or sword/gun (fun fact: the longer the dragon moves, the longer the stun effect lasts).
15. It works well for the entire build + beautiful graphics, especially for v2.
16. Unlike Darkin V2, which requires holding down certain targets, this Devil Fruit offers a quick and simple stun, ideal for slower players.
17. Skating skills allow you to chase or run after others at a higher speed.

Disadvantages:

1. When you use the Ice Age and Absolute Zero abilities, you cannot use any other abilities until the ice melts.
2. V1's skills don't operate in the air, and V2's skills are primarily ground-based.
3. It takes quite a bit of energy to slide across the water.
4. The stun range is small, unlike a regular stun where the stun range is the duration during which you can attack.
5. Super Ice Crystals and Ice Blasts have considerable repulsive force, making them unsuitable for dealing sustained damage.
6. The ice shards from the Ice Spear skill are quite small, and enemies can easily dodge them.
7. Ice Bird can dodge attacks thanks to Observation Haki.
8. Ice Bird's power has been reduced; instead of stunning for 2 seconds, it will now stun depending on the distance between you and your opponent. Ice Dragon is similar.
9. Absolute Zero only works near the ground, instead of at any altitude (Refreshed in update 17.2).
10. Ice Age attacks cannot hit players or airborne NPCs and can be avoided by camping in the air or, more simply, by jumping into the air.
11. Because the Ice Fruit V1 and V2 are primarily ground-based, they are less effective in aerial combat compared to Lava and Sand Fruits.
12. The Shark race's underwater speed buff will not work (in most cases) because the Icewalk passive prevents the player from falling into the water.
