

Tips for taking 'selfie' photos that are not upside down on iPhone

The feature of editing selfies (selfie) without being reversed on iPhone has been around for a long time, but surely not all of you know it.

Taking pictures with the front camera is one of the most basic features of a mobile device today, where you can save lovely 'selfie' moments to ask for your loved ones and friends. However, surely many readers have the same question of how to be able to take pictures without having the image reversed. For iPhone devices, you can do the following steps.

Instructions for taking selfies without being upside down

Step 1: Open the **Settings** app

Step 2: Go to **Camera** and select **Mirror Front Camera** (*Symmetrical front camera*)

Step 3: When this feature is enabled, you can access the camera application again to check if the image has returned to the actual frame you want.

In case you have pressed to take many reverse selfies before, you can also edit the photo again by going to **Photos** > Click **edit** in the right corner of the screen > Click on the **horizontal rotation icon (triangle shape)** in the left corner of the screen and press **Done** to finish.

Thus, with just a few simple steps, you no longer have to face the situation of being inverted when taking a selfie, helping you get the right image.

Wishing readers a happy photography experience with the iPhone camera.
