iOS 11 has been completed and Apple has included new features, so now is the time to explore iOS 11 tips and tricks that can make your 'Apple life' more advanced. These are iOS 11 tips and tricks you need to know.

1. Customize Control Center

The new Control Center is slightly different from the interface in iOS 11. Please refer to the following article to know how to adjust the Control Center iOS 11 interface.

2. Dark Mode in iOS 11

If iOS 11 is too bright for you, it's easy to make it darker. Read the article [How to enable the new Dark Mode feature on iOS 11](#) to know how to set this mode.

Unlike normal conversion, which changes everything on the screen, Smart Invert does not 'disrupt' images and other media.

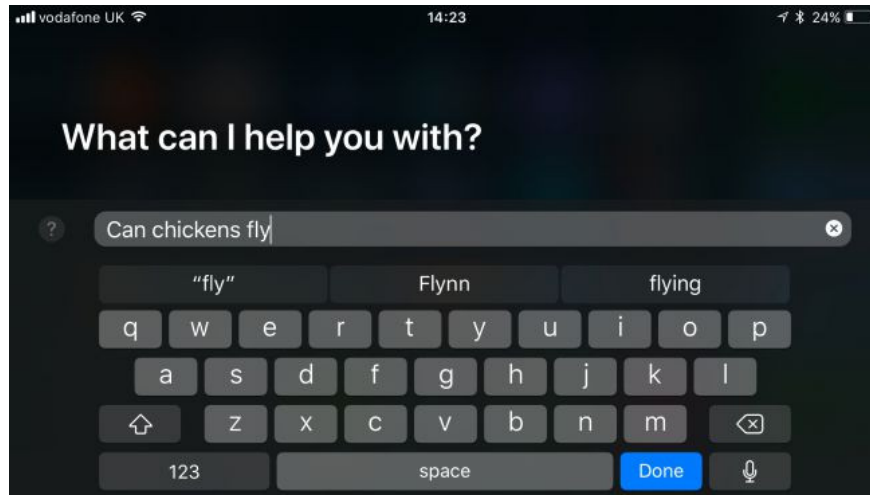

3. Use the 3D Touch feature on iOS 11

If your iPhone (or iPad) does not support 3D Touch, allowing you to add options by pressing hard on the icons, iOS 11 gives you a similar 3D Touch feature in the Control Center.

If you press and hold the buttons in the Control Center, you will get the 3D Touch feature. For example, pressing and holding the torch icon will appear to set the brightness level of the flashlight.

4. Use Siri with the keyboard

One of the big problems with the voice control device is that you don't always want to search for something by voice.

You can search Siri by text by going to **Settings > General > Accessibility > Siri** and turning on **Type To Siri**, pressing and holding the Home button will display the keyboard. "Hey Siri" still works.

5. Live Photos

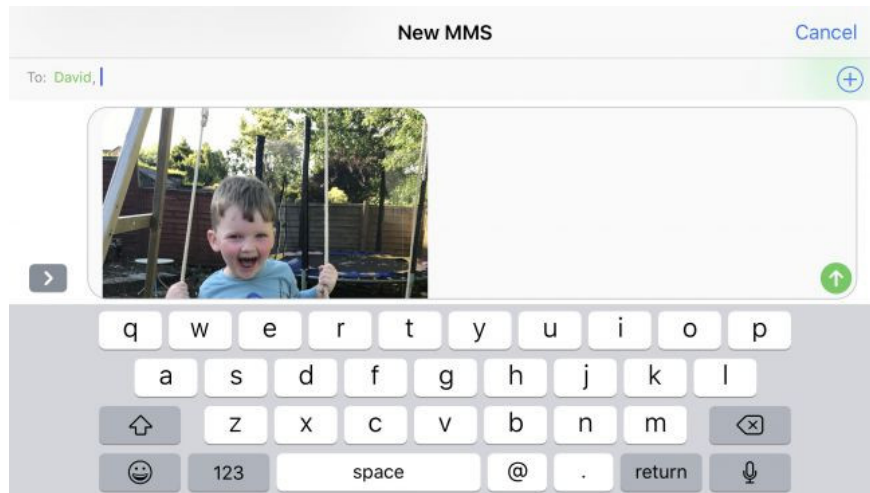

Now with iOS 11, you can edit Live Photo photos right on your iPhone, read the article [How to edit Live Photos on iOS 11](#) to learn more.

6. Click and drag to open the application

New Dock makes multi-tasking easier. If you're using an app and want to quickly check your mail, swipe from the bottom of the screen to display the dock, press and hold the message icon, and drag it to the side of the screen. Then it will open in a narrow window so you can send or read the message without exiting the application you used.

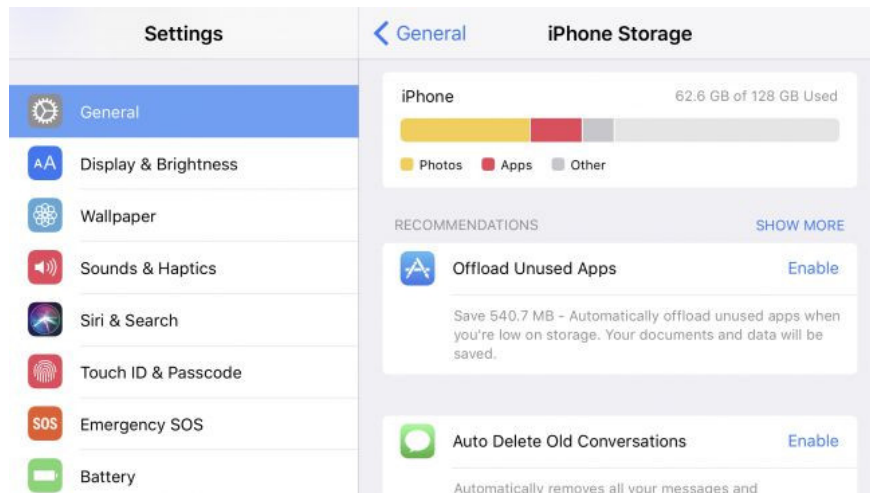

You can place parallel applications as before and can replace an open application by dragging the new application icon into it.

7. Send Live Photo photos to friends using Android

Live Photos does not work on Android but if you take a photo in iOS 11 and apply Loop or Bounce effects, you can send via MMS as MP4 files. However, sending by MMS will cost you.

8. Add storage space

iOS 11 introduces a number of new ways to improve the capacity available on the device, including new and more efficient file formats for photos and videos, although these formats only apply to images or recordings. new, not the format you already have.

In addition, you can free up memory by turning on iCloud synchronization for Messages in **Settings**> **Messages**> **Messages on iCloud** and deleting attachments in the same page.

You can also delete apps but still remember their data in case you want to reinstall. This option is in the iCloud storage section.

9. View more information in Notes

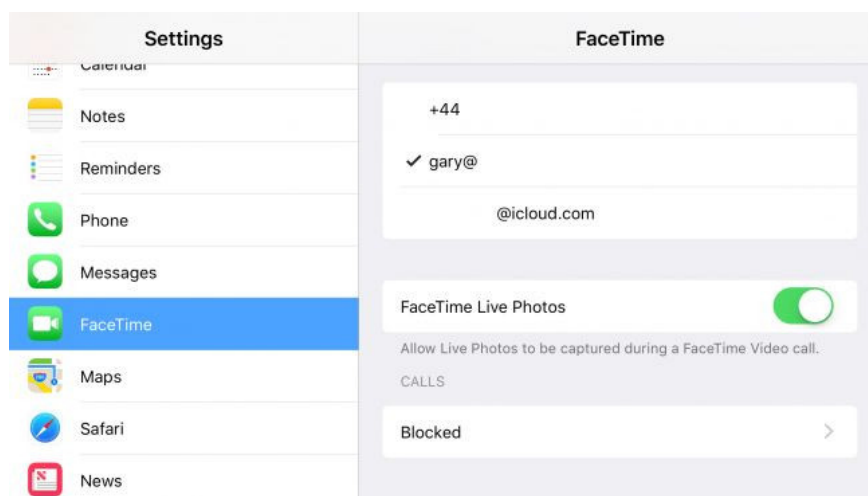

You can make Notes contain a lot of information in the same space, use tables to present lists in a format that is more efficient than bullet points and use Scan Documents to embed printed documents to make it easy to collect. Feedback and sharing.

10. Add a new image filter

If you look at the color filters available in the Photos app, you'll find that Apple has added some new features like Vivid Warm, Dramatic Cool and Silvertone.

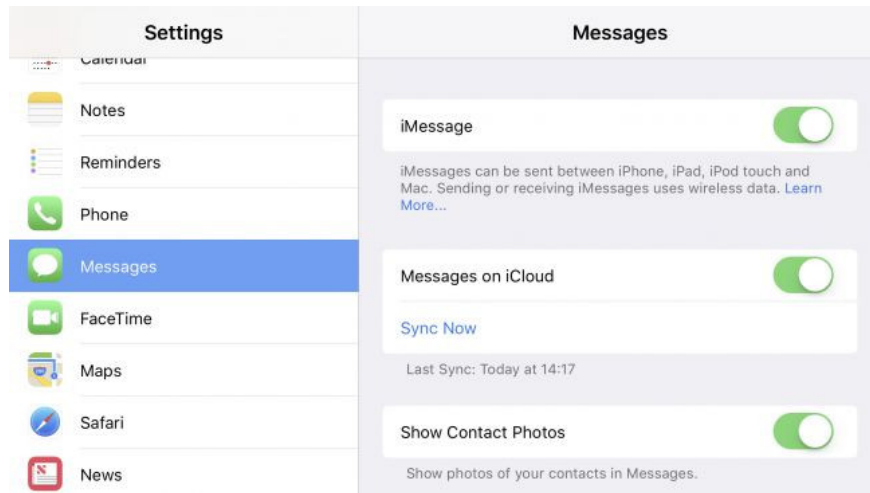

11. Lock for taking pictures while calling FaceTime

The new FaceTime Live Photo feature is very interesting and allows you to take photos without displaying the interface bits on the screen, but it also means that someone can take your Live Photo photos while making the call.

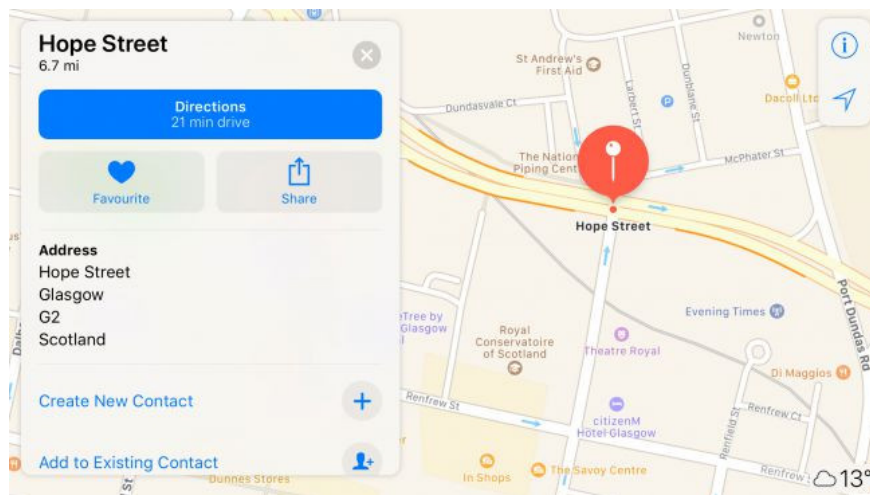

If you do not want this to happen, you can turn off the Live Photo option by going to **Settings > FaceTime**, but note that all you are disabling is this specific feature, not the ability to take a screenshot. image of iOS.

12. Do not leave unwanted messages on other devices

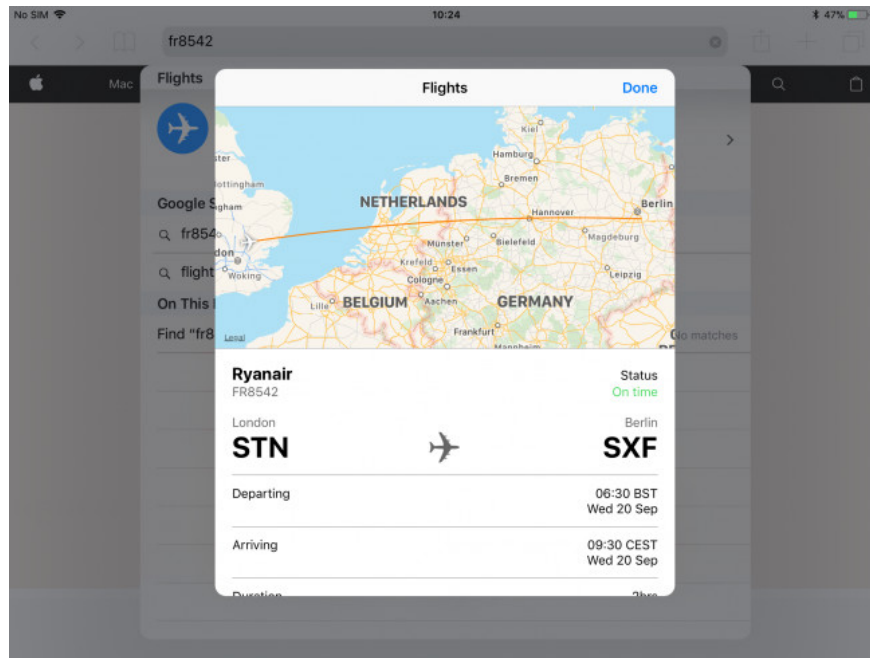

There is a great benefit to the new cloud-based system of Messages. If you have enabled Messages on iCloud, when you delete a message on your device, it will be deleted from any device. You will have to enable this option from your iPhone, because it is not in the iPad settings.

13. Zoom in on Maps

You are used to pinching and zooming, but in iOS 11, the iPhone Maps app has another way to zoom in and out. Double tap with your finger and hold it on the screen. Move it up to zoom in on the map and move it down to zoom out.

14. Track flights

Pick up family, friends or colleagues from the airport? Enter the flight number in Safari's address bar and you'll see flight details. Click on it and you will see not only the flight time and status, but also a map showing the current location of the flight.

15. Type the keyboard with one hand

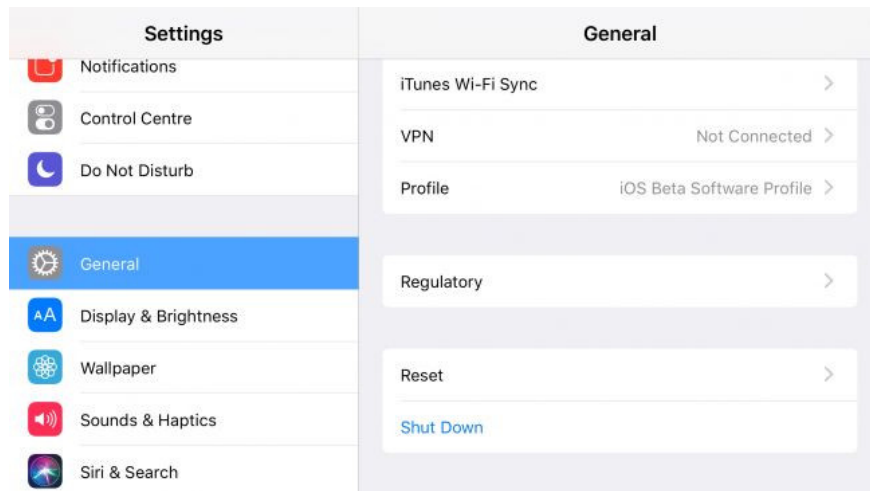

If you want to type the keyboard with one hand, follow the instructions in the article [How to activate the one-handed keyboard mode on iOS 11](#).

16. Notes on screenshots

If you like screenshot notes, you'll love the way iOS 11 handles them. Now, when you take a screenshot, you will see a thumbnail appear.

If you do not interact with it, the screenshot will be saved to the Screenshot album in Photos. When touching it, an editing screen appears so you can cut and annotate on the screenshot using the iOS 11 Markup tool.

17. Shut down when the power button fails

If the power button does not work, you can still turn off and start the iPhone. Go to **Settings**> **General** and scroll down to the bottom of the list. You will see a new Shut Down option, giving you the familiar Slide to Power Off button.

18. Scan QR code

Now your phone's camera when scanning a QR code will know which function is appropriate, for example if it contains a link that will be opened in Safari. Unlike Android, iPhone can scan a corner of a QR code and identify it.
