

# Tips to help you master the Galaxy A71

With just a few tips below, your life has become easier than ever with the Galaxy A71.

As one of the new mid-range smartphones launched by Samsung in recent years, Galaxy A71 has become one of the most worth-buying smartphones in the segment priced at VND 10 million. All thanks to the unique features that Samsung equips its product line, from a large screen, a slim design, powerful configuration, to a super-quality main camera, not to mention that the machine also has a duration. use super battery "buffalo".

However, equipped with so many features, but you know how to "master" the Galaxy A71 yet? If not, let's take a look at some of the tips below, making sure your Galaxy A71 becomes handy and helps a lot in the daily use experience.

## **Battery percentage display**

By default when setting up the device, Galaxy A71 will not display the remaining battery percentage in the status bar. Users who want to see how much battery is left on the device will have to pull down the notification panel from the top, or turn on the feature to show the percentage of battery in the settings. But not everyone knows how to turn on the battery percentage of the device.

Go to the "Percentage battery" search setting and do the following, the device will always show the battery percentage in the status bar

### **Customize key edge**

The edge key is another name for the power key (located to the right below the volume key cluster). With the new One UI platform, Samsung allows users to customize and set up action actions when using the power key (specifically, press twice and press and hold).
