

Tips to optimize damage in Genshin Impact

Optimizing damage is the most important condition to help gamers easily overcome and defeat the terrible boss in Genshin Impact.

For Genshin Impact, damage is one of the most important factors to help gamers go through and adventure in the colorful world of Teyvat. However, unlike other popular role-playing games on the market, the damage in Genshin Impact is not only based on the stats and weapons in the game, but it is the element, formation and environmental factors. most important.

Even if you control these important factors, gamers will easily put down the boss damage or reach the threshold of damage calculated by 4-5 numbers. Let's take a look at the tips of how to optimize damage that gamers often ignore.

Feel the power in your own words

Spinning Gacha is one of the interesting elements in Genshin Impact and is also an important condition determining the strength of the prime squad of the player. But also because of the unlucky ability to shoot Gacha that gamers often give priority to 5-star characters with strong skills and large-scale damage like Diluc or quick recovery skills with lightning effects like Keqing.

Actually pursuing power from quite comprehensive characters such as Diluc, Keqing is not wrong, but if you only have a temporary desire through highlight videos, gamers have forgotten many 4-star characters who are capable of advancement. equally powerful in Genshin Impact.

To make it easy to imagine, the Dilucs, Keqing, Venti . Like the children of rich and talented and to grow them up, gamers need to spend a small amount of money on education and facilities. And the 4-star characters are poor children but eager to learn and easy to train into talents with moderate economic potential.

In fact, in addition to the Diluc highlights that slash more than 10k fire damage, there is no shortage of popular characters like Lisa that takes lightning damage more than 30k.

The reason why the popular ones can rise in damage equal to other 5-star characters mainly comes from the easier 4-star characters, and instead of having to invest a large amount to get A 5 star character upgrades the entire palace.

Gamers can choose easily based on their own feelings and upgrade the default 4-star characters or adventurers to high, and using a suitable set of relics is more than enough to cause tons of damage.

3 stars are not necessarily weak, 5 stars may not be strong

Along with the element of easy to upgrade the destiny, the weapon is the key factor determining the damage in Genshin Impact is the weapon. Weapons with higher level and refinement have the ability to deal bonus damage and effects.

But if you have a long-term vision, instead of choosing 5-star weapons with great damage and effects, gamers will trust in more economical 3-star weapons and easily reach power levels after upgrading and refined to the highest level.

In particular, refining the 3-star weapon in Genshin Impact is even simpler when these 3-star items gamers can easily pick up in the process of opening chests rarely adventure in the game.

In addition, if you choose a 4-star weapon as the main weapon, gamers must focus on fighting the boss Dragon Dvalin and the leader of the wolf Bac Phong once a week with a very low rate of crafting for refining.

In addition, the early upgrade of a 3-star item also helps gamers take advantage and choose the right effect for their team, in addition, if Genshin updates new characters to also use common weapons, gamers still have. The maneuverable body converts weapons to new characters to optimize their play style.

Make use of the elements to have the right policy

For gamers who are just starting to play Genshin Impact, they will tend to go to the community to learn how to play and then a series of clips showing more than a few tens of thousands of damage 1 cumulative and then return to the core. My objects with crit damage (critical) only a few thousand and then start to discourage the

game.

TipsMake's advice is that you should ignore those bragging videos and focus on studying elemental combinations and boss battles a lot to get used to moveset and start trying to beat bosses without getting any hit.

In addition, if you pay close attention, the videos showing the damage when fighting bosses are mainly based on that elemental compatibility. Fire-element Diluc, for example, when attacking a Boss, Primitive Lightning causes an Overloaded effect that increases fire damage on the final attack and if hit a boss's weak spot, this effect will last. increased many times.

To do this, gamers are one of the first to get used to the boss's style, the other is to take advantage of the elemental view (middle mouse) to clearly display the weaknesses and easily deal greater damage as well as Stun these giant monsters.

Besides, all the characters have the ability to inflict elemental damage, not just strong swordsmen like Diluc, Chong Yun. Therefore, instead of building with highlights and becoming a shadow of others, gamers need to be confident and open their own new path.

Epilogue

It is not Gacha but the elemental skill and the hard work of finding materials to upgrade that is the truth that helps gamers have a huge damage squad in Genshin Impact.

In addition, Genshin Impact at the present time has only updated two elemental countries and a few characters, so instead of racing for arms in the beginning of the game, gamers should use this time to feel and get acquainted before the game. More powerful characters appear in the future.
