4. How to protect email with Face ID or Touch ID on iPhone

How to increase sensitivity for Touch ID and Face ID on iPhone

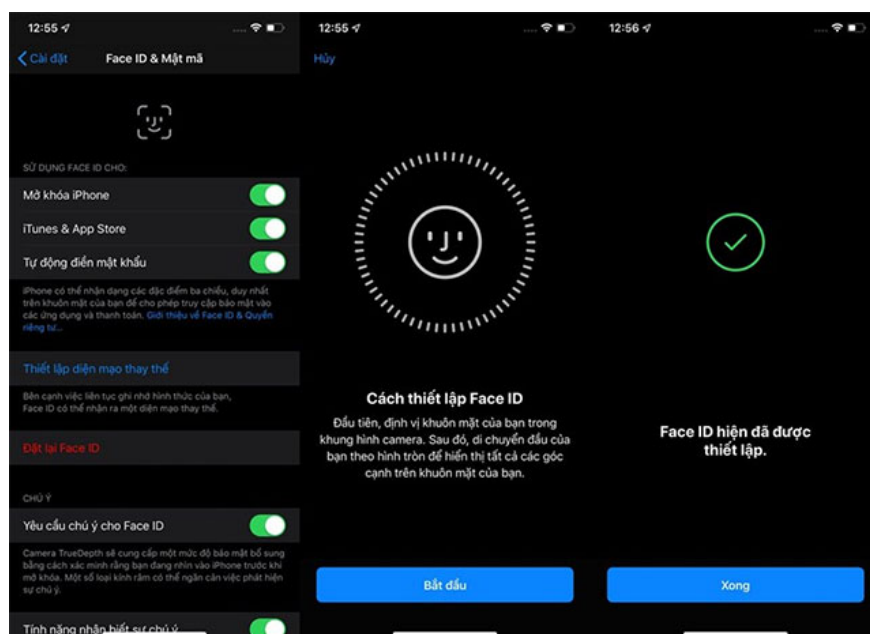

As many of you know, you can enter up to five fingers to unlock Touch ID on iPhone depending on the intended use. And you can use commonly used fingers to unlock or convenience to unlock most in both hands.

So with Touch ID, you should use 2 or more fingers so that when you cannot open this finger, there are other fingers to use and unlock. However, you have to remember that your fingers or home button should not be sticky, even if a little.

By going to **Settings > Touch ID & Password >** in the **Fingerprint** section, please click on **Add Fingerprint >** set your finger conveniently to unlock. Then in the menu you will see the finger just added. Please lock the screen and open with that finger to check.

Similarly on Face ID, after updating to iOS 12, you can also set up to 2 different faces to unlock iPhone. If you don't use a face instead, you can set up your 2 faces to increase face recognition.

With these two ways, you can speed up unlocking the face and speed up unlocking the fingerprint on the iPhone. If you find it helpful, share this tip with your friends and relatives.

In addition to using biometric security to unlock iPhone, you can also lock apps and unlock fingerprints or unlock with faces. View through 8 applications can unlock with Touch ID and Face ID to know which applications are.
