

Tips to speed up the Internet, connect to the network faster

There are many factors that affect the speed of Internet connection on your computer, one of the most important factors is the speed of the line being used. However, you can change the connection speed by changing the settings on Windows to partially improve the speed of Internet connection.

There are many factors that affect the speed of Internet connection on your computer, one of the most important factors is the speed of the line being used. However, you can change the connection speed by changing the settings on Windows to partially improve the speed of Internet connection.

1. Change the DNS Server

Changing the DNS Server is one of the most effective ways to speed up your Internet connection. To change the DNS Server, follow the steps below:

Step 1:

Open Control Panel.

Step 2:

Access **Network and Internet** => **Network and Sharing Center** .

Step 3:

Click on **Local Area Connection** then select **Properties** .

Step 4:

Find and double-click **Internet Protocol Version 4 (TCP / IPv4)** .

Step 5:

Marking section **Use the following DNS server addresses** .

Step 6:

Next enter the full DNS server below:

Preferred DNS Server: **8.8.8.8**

Alternate DNS Server: **8.8.4.4**

Or:

Preferred DNS Server: **208.67.222.222**

Alternate DNS Server: **208.67.222.222**

Step 7:

Click OK and proceed to restart your computer.

2. Clean up your computer

There are lots of junk files and temporary files on your computer - this is one of the reasons why your Internet connection performance is reduced.

In addition, installing many programs and programs running in the background on the system also slows down the speed of Internet connection.

If your computer has many junk files and installs unnecessary programs, you should delete the files and remove unnecessary programs to improve the speed of network connection faster.

3. Scan the Virus

Viruses are not only the main cause of the problem of slowing down the speed of Internet connection but this is also the reason why your computer is working slower and more slowly.

Your advice is to scan the virus every week so that your computer works faster and improves the speed of Internet connection faster.
