

# To speed up the Windows 7 boot process, read this article

The process of starting a computer quickly or slowly depends on many factors. However, if you're using a Windows 7 computer and the process of booting your computer lasts, even taking half an hour will make you feel annoyed and just want to smash your computer. .

The process of starting a computer quickly or slowly depends on many factors. However, if you're using a Windows 7 computer and the process of booting your computer lasts, even taking half an hour will make you feel annoyed and just want to smash your computer. .

In the following article, Network Administrator will show you how to speed up the process of booting your Windows 7 computer.

## Instructions to speed up Windows 7 boot process

If you are using Windows 7 or Windows Vista and you want to speed up your computer boot process, follow the steps below:

### Step 1 :

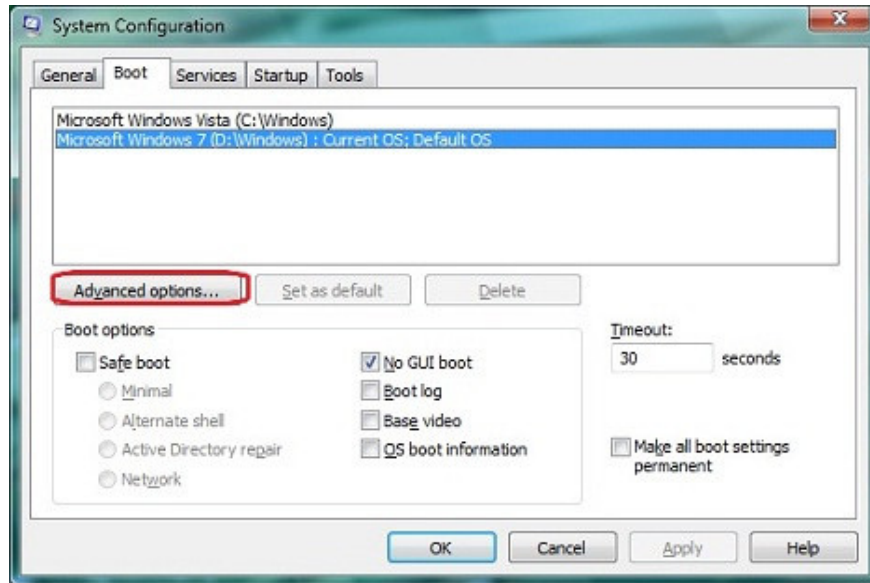

First enter **msconfig** in the **Search** box on **Start Menu Windows 7** or Windows Vista, then press **Enter** .

### Step 2 :

If the **UAC** notification window is displayed, click **Continue** . By default, the UAC notification window does not appear on Windows 7.

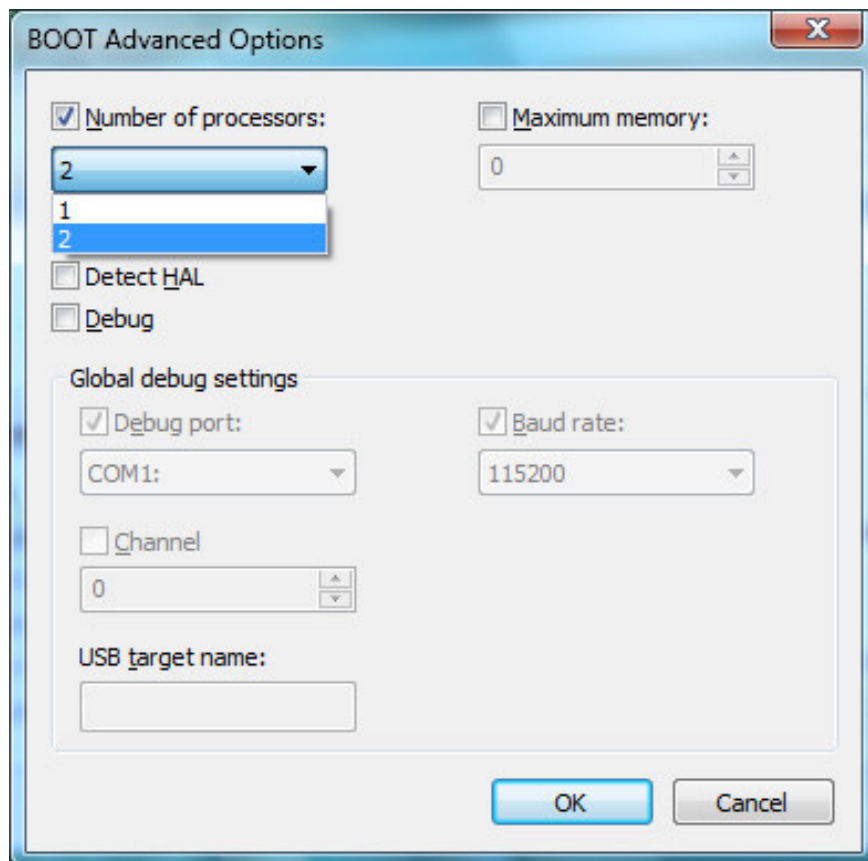

### Step 3 :

Now the **System Configuration** window appears, where you navigate to the **Boot tab** , then click the **Advanced options** button.

### Step 4 :

Select the item named **Number of processors** , and you can select the number of processors from the **drop-down menu** .

**Step 5 :**

Click **OK** .

**Step 6 :**

Finally **restart** your Windows 7 computer and feel the difference.
