

# Today, the solar storm will 'directly hit' the earth

NASA predicts a solar storm will hit Earth on July 19. Dr Tamitha Skov of The Aerospace Corporation (in Los Angeles, USA) said that this time the solar storm will hit the earth directly.

Skov, a space weather expert, added that this solar storm could disrupt GPS and radio signals, as well as affect the operation of satellites in the night part of the globe. . It is likely that there will be aurora borealis in some areas of the earth.
