

# Tooltip creation tools are useful with VueJS

Creating a tooltip is the quickest and easiest way to add a caption to an image or a piece of text without clicking on anything. Let's explore the 6 useful tooltip creation tools with VueJS through the following article!

Creating a tooltip is the quickest and easiest way to add a caption to an image or a piece of text without clicking on anything. Let's explore the 6 useful tooltip creation tools with VueJS through the following article!

## V-Tooltip

V-Tooltip is a Vue.js component supported by Popper.js. It provides a new directive called **v-tooltip**, which can be added to any element to create a tooltip. V-tooltip can contain tooltip content or **Options**. In addition to custom v-tooltip directives, you can also add tooltip with **v-popover** components. With this component, you can add more complex content to the tooltip with the Vue.js component or HTML.

## Vue-Bulma Tooltip

A Vue.js component for creating tooltip based on Bulma user interface framework. This library is part of Vue Bulma. However, this tooltip component is available as an NPM module named vue-bulma-tooltip which you can use as standalone components.

## Vue-Directive-Tooltip

Overall it is similar to the V-Tooltip component based on Popper.js and provides the same directive called v-tooltip. However, it does not provide v-popover components.

## Referencing an HTML element

Example: [the target is an html element](#)

this content is in an HTML tag

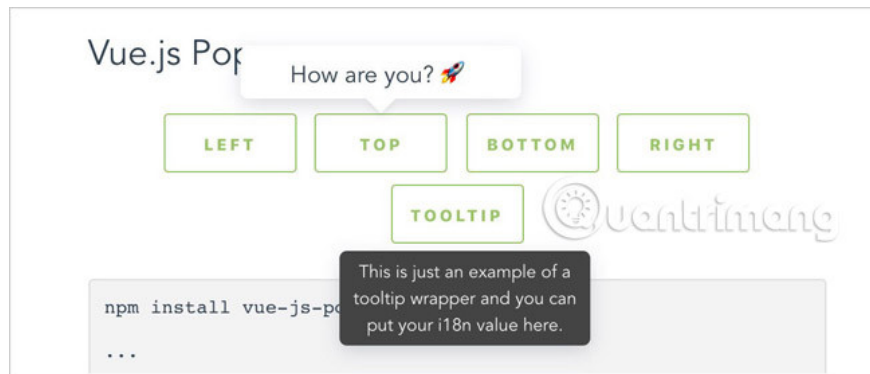

## Vue-Tippy

This library turns Tippy.js into a Vue.js component. It has a custom Vue.js directive called v-tippy that acts as an HTML attribute. We can add content for tooltip or options to customize it. It also displays custom Vue.js components on tooltip content using html options.

[Tippy.js](#) is a lightweight, vanilla JS tooltip library powered by Tippy.js  
VueTippy is a VueJS wrapper for the Tippy.js library, with custom tooltip content using html options.

## VueJS-Popover

A custom Vue.js with a custom directive called v-popover and two specific custom components is and helps developers more flexible in adding tooltip in Vue.js application.

## Vue-Gint

This is a Vue.js plugin that includes Hint.css. This plugin features v-hint-css directive to add tooltip. It brings the same set of options as Hint.css, so you can add them as a JavaScript object or a Vue.js modifier.
