

# Top 10 best free Keylogger software with Windows

Keylogger can be a software or a small hardware device used to capture and collect information about keystrokes typed on the keyboard.

Keylogger can be a software or a small hardware device used to capture and collect information about keystrokes typed on the keyboard. Keyloggers are designed in the form of a hardware device that can be easily detected because the physical device needs to be connected between the keyboard and USB or PS2 ports. However, for a software-type keylogger, it can be run while the computer user is often unable to notice it. Then, to identify a keylogger software running in the background, they will have to rely entirely on security software such as anti-keylogger or antivirus utility packages to remove keyloggers. In short, when a keylogger is installed on the system, it means that all operations you perform on the computer in general and on the keyboard in particular are under surveillance.

There are also many reasons to legalize the use of keyloggers, for example to monitor your children, making sure they are safe on the Internet, especially when chatting and making friends with strangers. Or even a director can use a keylogger to track his employees to make sure they don't copy or leak any confidential information. However, often the keylogger that is used for nefarious purposes is many, simple and most common is stealing someone's password.

There are many keylogger software or similar keyloggers found on the Internet, some of which are free, while the rest are shareware that requires paid usage with more advanced features. In general, a paid version of keylogger software often has a better 'stealth' ability to prevent detection by expert users and other advanced security software. As for free keylogger software, they are often very limited in terms of functionality and ability to run in the background, so they can only "cheat". After collecting the results and testing nearly 20 different free keylogger software, we can summarize a list of the 10 best free keylogger software for Windows devices as follows.

## 10. Free Keylogger

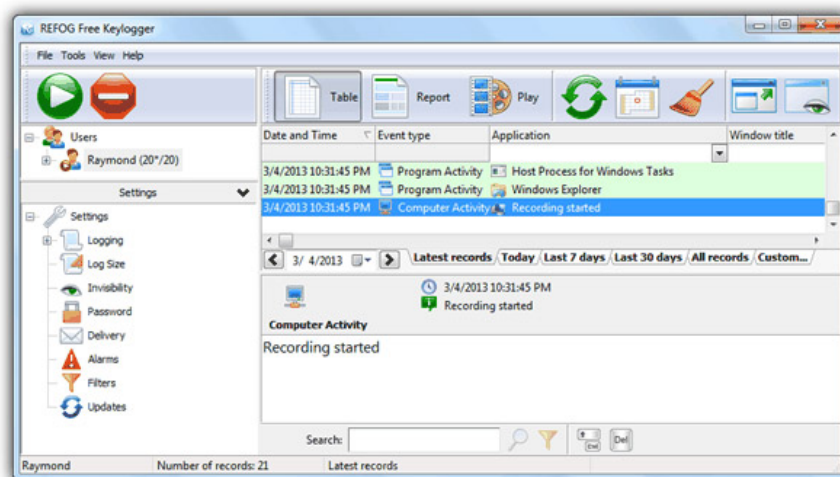

Free Keylogger can monitor and record keystrokes, clipboard data and website addresses without screen capture, this is great for those who do not want to take screenshots. There are several stealth settings in Free Keylogger such as hidden mode shortcuts (default is Ctrl + Shift + Alt + U), delete shortcuts from the Start menu and uninstall list.

In fact, the Free Keylogger is the most downloaded keylog tool on CNET download.com, but ironically, this does not help it topping the top 10 keylogger software by only one reason: Feature Important default hiding right after starting the program is turned off in the free version. You can set to automatically launch this program with Windows but it will display the icon in the notification area and anyone can access it because Free Keylogger does not have password protection.

Download Free Keylogger.

## 9. REFOG Free Keylogger

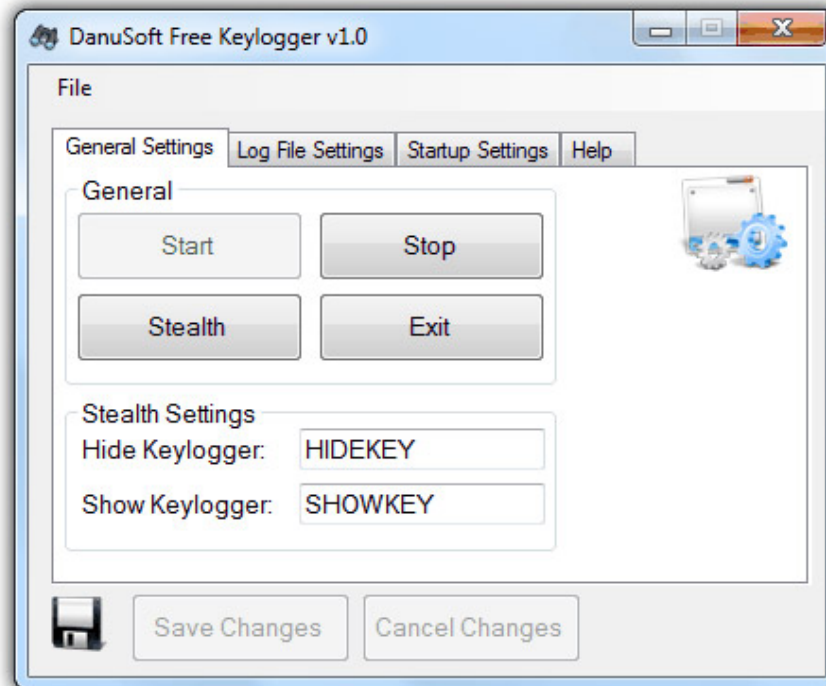

REFOG is a very well-known software company, offering a wide range of useful keylogger tools for business as well as business environments, but unfortunately the free version is very basic because most The important

features that made its popularity have been omitted. The free version of the REFOG keylogger is only capable of monitoring key combinations, accessing websites, clipboard, running programs and computer activities.

The biggest drawback of the REFOG Free Keylogger is that it will not be able to run completely offline because like Free Keylogger, it has an icon in the notification area, but fortunately this program can at least be protected. password protection.

## 8. DanuSoft Free Keylogger

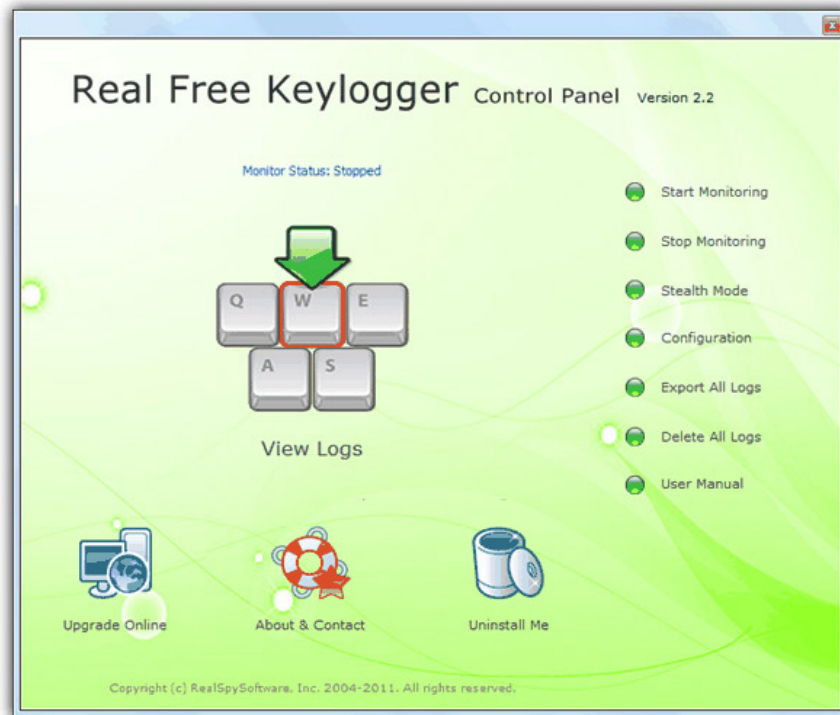

DanuSoft is a free, simple and easy-to-use keylog tool. The only way to hide and unhide this program is to type a selected keyword, for example the hidden keylogger keyword is 'HIDEKEY' by default. From the Startup settings tab, you can configure DanuSoft to automatically run invisibility while booting the system.

However, DanuSoft is not integrated with password protection, and although it runs in Windows, it is not hidden in Windows task or discovery managers.

The author of this keylogger tool seems to have abandoned this project because it is no longer found on the DanuSoft official website, but can still be downloaded from some download pages.

## 7. Real Free Keylogger

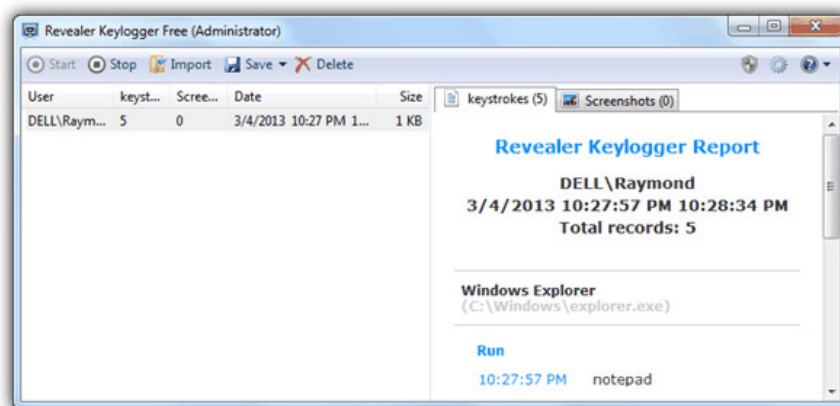

After installing the Real Free Keylogger, start the software for the first time and will be prompted to set up a password protection. Only you can access the settings and view the logs in the program. In addition, you can also set a hotkey (default Ctrl + Alt + X) to launch the program when it is running in hidden mode. Real Free Keylogger is integrated calendar so you set up to automatically start logging. Log files can also be exported in .HTML format.

The program folder is set as system properties and is only displayed when hidden operating system files are unchecked in Folder Options.

## 6. Revealer Keylogger Free

Revealer Keylogger Free is the second most downloaded monitoring tool on CNET Download.com. After testing, many users have found that this is a very sensitive and lightweight software to use in the system. It can

record shortcuts, have multiple language support, boot settings, the ability to run with advanced permissions, support hotkeys (default is Ctrl + Alt + F9) and automatically log in. However, screen capture, automatic sending options and other hidden features will be omitted on this free version.

Revealer Keylogger Free can also be password protected and is completely hidden in the taskbar as well as in Windows management programs. To uninstall, you can do so by starting the program, clicking the question mark icon at the top right, go to the Program section and select uninstall.

Download Revealer Keylogger Free

## 5. KidLogger

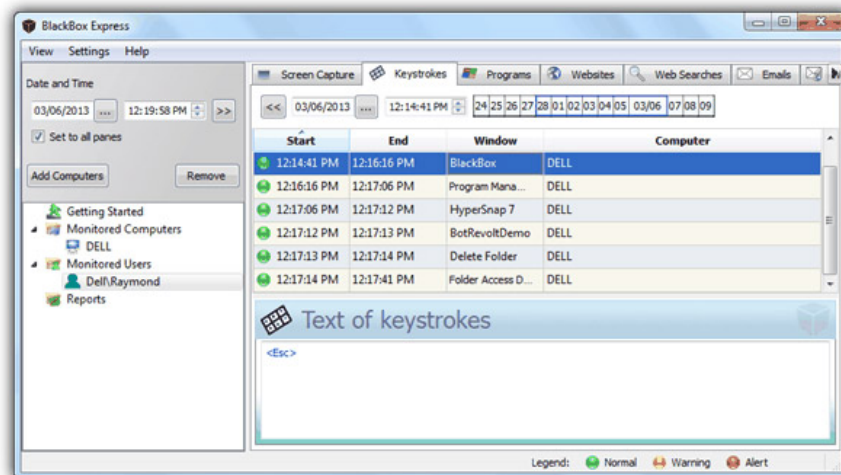

KidLogger is a free, open source user activity monitoring tool. Unlike just recording keystrokes and clipboard, as the software has appeared at the first half of the list, it can also record information about using USB drives, files, folders, and even Releases are both audio from microphones as well as screen shots (including Skype videos). You can set keywords as warnings while shooting. Log files can be viewed locally or from your KidLogger online account. KidLogger can be installed and works well on Windows, Mac OS X, Android, Symbian, BlackBerry and iOS.

When running, KidLogger runs in the background but can still be seen in the system's task manager and explorer. In addition, there are no hotkeys or commands to launch the program, so you will need to use the shortcut or from the executable file (.exe). KidLogger can also be password protected.

## 4. BlackBox Express

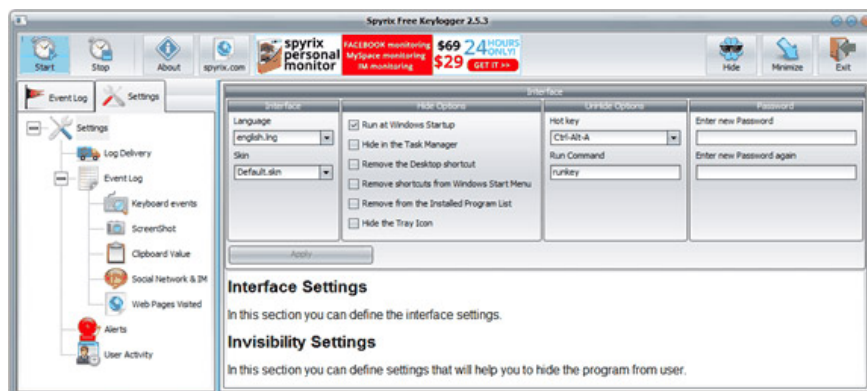

BlackBox Express is a free security monitoring software that can be used as a keylogger. However, the way the BlackBox works will be slightly different from the rest of this list because it can monitor a local computer and nearly 200 remote computers on a network. It can record keystrokes, search the web, run programs, access websites, access email clients, webmails, messaging programs and screen shots. In addition, you can also block users that you do not want to track on your computer. BlackBox Express notifications and reports can be printed and saved as HTML or emailed.

BlackBox Express can launch as a service and hide by default without showing up in the taskbar as well as as an icon in the notification area. However, you can still find the BlackBox Express in the task manager. The only way to launch this program is from its shortcut or exe file. Password protection is also supported on BlackBox Express. You need to register for a free account to download the installer for this software.

Download BlackBox Express.

## 3. Spyrix Free Keylogger

Spyrix Free Keylogger is the free version of Spyrix Personal Monitor. It can record keystrokes, clipboard and screen capture, but advanced features such as social network monitoring, web site monitoring, sending logs and reports are omitted. When Spyrix is hidden, it can be launched by hotkey (Ctrl + Alt + A) or by command (runkey) and can be password protected.

Spyrix Free Keylogger has a lot of potential to stand in higher positions on this list if its ability to hide is improved. Although Spyrix users seem to be invisible to the average user, it is actually easily detected by the ability to scan hidden programs in the task manager. In addition, the program's directory is not hidden.

## 2. WOOD iSam

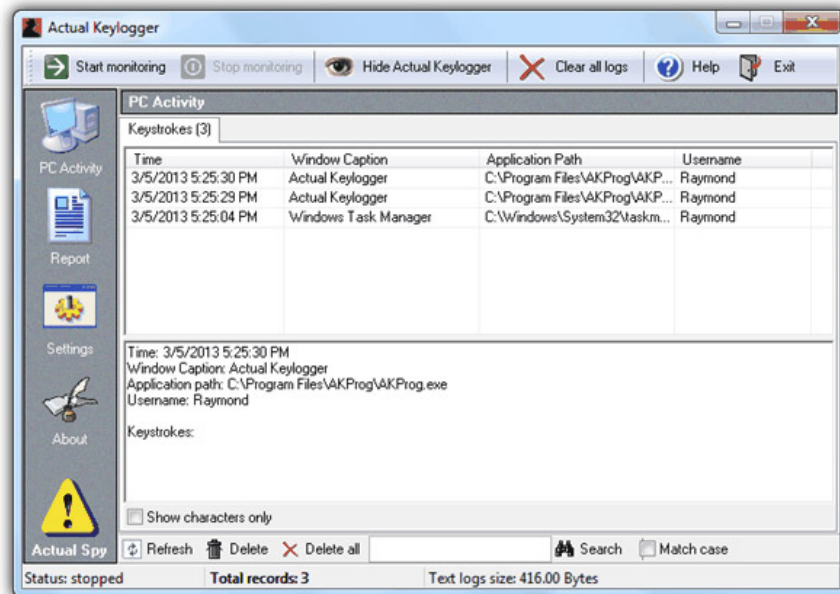

iam is a free keylogger with built-in features from basic to advanced such as the ability to take screenshots, install hotkey (default T + G + Enter) to run programs, password protection (wear 1234), automatically send email log files, highlight keywords and display banners for user alerts, schedule, URL block and result filtering tools.

The minus point of GS iSam is a relatively complex interface, not user-friendly, so it takes a little time to get used to, so you can use it. In addition, you must also install Microsoft .NET framework 4.0 before you can install iSam. Although the program can be hidden while running, it will still be displayed in the task manager, program folder and uninstaller list.

Download WOOD iSam

## 1. Actual Keylogger

Actual Keylogger was once a completely free keylog program, but now it has a commercial version with the name changed to Actual Spy. Although the final free software version of Actual Keylogger (2.4) has been released since 2006, it has so far been able to work perfectly when tested on 32-bit Windows 7 operating systems. Like other modern Windows versions, Actual Keylogger only supports recording key combinations. You can access the program in two methods, one is to use hotkey (Ctrl + Shift + Alt + F7), the other is to run the command (akstart).

While not as powerful as the current features, among the 9 free keyloggers mentioned above, Actual Keylogger is the most powerful stealth tool, and you can't find it in the task manager. Program folder hidden. Also the shortcuts will be deleted and not displayed in the uninstall list of Windows. Another additional security feature that helps Actual Keylogger can be password protected to prevent unauthorized users from accessing the program and log file, which is why this tool tops the list.
