Many diseases of neurological disorders make people behave strangely and so far these diseases are still a hidden challenge in the medical industry.

**Psychiatry** is one of the areas of " *challenging* " medicine. A psychiatrist can never know for sure what is going on in the patient's head. Currently there are many different types of psychosis syndrome. Here are the **Top 10 mysterious psychosis syndrome that the human brain is capable of** , some of which you may not have heard of. Invite you to consult!

## 1. Quasimodo syndrome

© PROSOPOPEYA PRODUCCIONES

**Quasimodo syndrome - appearance disorder**, also known as *Body dysmorphic disorder (BDD)*, is an extremely dangerous psychosis syndrome. However, if you do not understand it, you will not know what the victim is facing, but simply think that they are "too cool".

Appearance disorder syndrome is known for its obsessive obsessive thoughts about **defects in the body**, and sometimes they try to find out by being ugly or even . imagining. out them.

**Patients often mirror a lot and always try to find an angle that they think their defects will not be discovered by everyone**. They refused to take any photo invitations to avoid those defects caught in the photo. They always take care of their looks excessively.

This may be the first time you've heard of this strange syndrome, but the frightening fact is that Quasimodo syndrome has been affecting 2.4% of the world's population. Their lives and their love always have problems due to this disorder. Their self-esteem is very low, often feeling awkward outside of society and always suspecting people around are laughing at their defects. Do you hear this familiar?

The absurdity of Quasimodo syndrome is revealed in a short film called "*Contracuerpo*".

## 2. Erotomania syndrome

© Castelao Producciones SA

**Erotomania syndrome**, also known as "*sexual impulse*", is a syndrome that people who are always certain that someone, often a famous person or a high-ranking person in society - is secretly in love they.

**Patients with this syndrome believe that mysterious fans often show their love through special signs, signals, telepathy or even encoded messages on television.**

This disorder is difficult to resist, even if the person deemed to fall in love with the patient has directly said "*no*". This rejection is explained by patients as part of a strategy to hide their relationship with their society.

This syndrome is illustrated in the movie " *From Land of the Moon* " ( *Marion Cotillard's character* ).

### 3. Capgras illusion syndrome

© Alcove Entertainment

**The illusionary syndrome Capgras** , also known as " *double illusion* " makes patients believe that there is a close person to them or they themselves are replaced by a " *strange twin - doppelganger* ". The patient confirmed that the bad actions they caused were done by the " *impostor* " who looked exactly like them. **This disorder is often accompanied by schizophrenia** .

This syndrome is named after the French psychologist, **Jean Marie Joseph Capgras** , who described it in 1923. **Doppelganger** refers to a person whose appearance looks very much like you but is completely unrelated. any blood. In legend, doppelganger is used to refer to a " *strange twin* " living in a parallel world, a sign of bad luck. In some other cultures, they call these people " *twin demons* ".

The feature film " *The Double* " is based on *FM Dostoevsky* 's novel of the same name, showing the nature of the disorder.

### 4. Fregoli syndrome

© Paramount Animation

**Fregoli syndrome**, also known as **Fregoli hallucinations**, is in stark contrast to the Capgras syndrome mentioned above. Patients with this syndrome believe that under the faces of strangers who are close to them, this person always wears makeup and changes the appearance constantly with the aim of monitoring the patient.

This syndrome was first described in 1927: A young girl thought she was being watched by two actors working at the theater, which she had visited. These two actors often disguised themselves as the acquaintance or person she met.

This syndrome is named after the Italian actor, **Leopoldo Fregoli** - who is famous for his superficial ability to change appearance.

This syndrome was revealed somewhat in the animated film "*Anomalisa*".

## 5. Syndrome Adele

© Les Artistes Associés

**Adele syndrome**, also known as " *love obsession* " syndrome, is a serious mental disorder. Patients with this syndrome have an obsession with love, yearning for love and romance about a love affair with absolutely no response.

Symptoms of illness are similar to severe **depression** but can be much more dangerous: abuse, self-deception, false hope, voluntary sacrifice, ignoring the advice of relatives and friends, acting risk and lose interest in other topics and activities.

**The syndrome called Adele is because of a true story that happened to Victor Hugo's daughter , Adele Hugo - a beautiful, charming and talented young girl** . Adele Hugo infatuated an English major named Albert Pinson and immediately decided that he was the man of her life. None of us can say for sure if Pinson is a heartless scammer who betrayed Adele's feelings, or he was just a victim of porn trends. However, Pinson did not have any response, regardless of Adele's beauty or her father's reputation. Adele chased him to all over the world, lying to everyone that they were married and eventually became completely " *crazy* ".

You can watch " *The Story of Adele H* " , a film about syndrome Adele and the young woman named after.

## 6. Cryptomnesia syndrome

© Canal +

**Cryptomnesia syndrome**, also known as " *hidden memory* ", is a type of **memory impairment** (introduced by *Flournoy psychiatrist in 1901* ). The patient cannot remember when a particular event took place or that event was a reality or a dream.

This is a phenomenon when a forgotten memory appears in the mind of a person who cannot recognize the source of that information. In other words, the source of information is completely forgotten.

This syndrome is also accompanied by the " *Jamais vu* " phenomenon ( *as opposed to "Deja vu"* ), when suddenly you feel a famous place or a famous celebrity is completely unfamiliar or unusual, as if this is the first time you saw it.

In the photo, you can see a scene in the movie " *The Science of Sleep* ".

## 7. Alice Syndrome in Wonderland

© Roth Films

**Alice in Wonderland Syndrome** changes patients' perceptions of objects and surrounding space: patients feel they are becoming smaller or larger; or realize they are far away but in a strange way, they are very close.

The most difficult case is when the sick person feels that his or her own body is somewhere wrong. They do not understand its shape and size. In this case, there are no problems with the patient's eyes or other sensory organs, these changes only relate to **their mental state** .

## 8. Obsessive-compulsive disorder (Obsessive-compulsive disorder-OCD)

© Appian Way

Patients with **obsessive** -*compulsive disorder* ( *Obsessive-compulsive disorder* - *OCD* ) face obsessive thoughts and worries that they cannot control: special actions or rituals that they are forced to show.

At the same time, the patient also fully understands the irrationalities in those actions but the incompleteness will lead to terrible anxiety. As a result, they force themselves to regularly perform these rituals or actions.

A vivid example of a patient with obsessive compulsive disorder - OCD is **Leonardo DiCaprio** in " *The Aviator* " .

## 9. Paraphrenia syndrome

© commons.wikimedia

**Paraphrenia syndrome** or "*paranoid paranoid syndrome*" is a combination of paranoia and amplification. The myth of the patient is often accompanied by hallucinations and "*false memories*". The patient considers himself the ruler of the world, the immortal, the divine origin and proclaims himself to be the writers of the great writers (*they worked under the pseudonym that writer* ).

People diagnosed with this disease are often arrogant and mysterious.

## 10. Dissociative identity disorder (DID)

© Blinding Edge Pictures

**Multi-personality disorder** , also known as "*Dissociative identity disorder (DID)* ", is a rare **neurological disorder** - the patient divides his personality and thinks that there are many different people. inside my body. These individuals may have gender, age, nationality, temperament, mental ability, worldview and even different types of illnesses.

The cause of this disorder is due **to severe psychological trauma** in childhood: for the purpose of psychological protection, the child begins to think that what is happening to them is actually happening to others. .

The most remarkable story about the division of personality occurred in the US in the late 1970s. When the rapist **Billy Milligan** was arrested, science discovered that there were 24 people living in his head.

The main character in "*Split*" also suffers from such a disorder.
