## Ili Pika - "Magic" Rabbit

© Li Weidong

This cute and extremely rare creature is also known as the "*Magic Rabbit*". Ili Pika has been photographed for the first time in 20 years. They were discovered in China's Tian Shan Mountains.

## Pinocchio Frog

© Tim Laman / National Geographic

This creature is called "*Spike-Nosed Tree Frog*". When the male frog tries to attract a female frog or warns of a certain danger, its nose is as long as Pinocchio's character.

**Goat nose monkey**

© Tim Plowden / REX / Shutterstock

The world's rarest primates were discovered in 2010 in Northern Myanmar. Because of their unusual shape at the nose, this monkey always sneezes when it rains.

**Red fish have fins like arms**

© Karen Gowlett-Holmes

A few years ago, scientists discovered 14 arm-like fish species, of which 9 are in danger of extinction.

### **Honduran white bat**

© nationalgeographic

White bats in Honduras and Central America often live in leaf tents, eat fruit and may be up to 4.7cm long.

### **Dumbo octopus - Grimpoteuthis**

© NOAA Ocean Explorer / flickr

This strange deep sea animal is recognizable because there are two fins between the foot membrane, like the ears of an elephant flying Dumbo from the famous animated film.

### **Salp species**

© reddit

Salps are planktonic organisms that absorb the CO<sub>2</sub> in the water and pump it into the body, so it is transparent. We all have to thank them because without them, the amount of carbon in the water and air will be very high.

### **Pink eye grasshopper**

© Piotr Naskrecki / Courtesy of Conservation International

This grasshopper has prominent pink eyes that live in the Muller Range, the Pacific highlands.

### **Cherax Lukhaup Lobster**

© Christian Lukhaup

This Cherax Lukhaup lobster species has beautiful colors discovered in Indonesia last year.

### **Shanghai soft shell turtle**

© Mikael Buck / SOLENT

This Shanghai soft-shell turtle uses long snorkel necks and nostrils to breathe underwater.

### **Bats in Nendo**

© Piotr Naskrecki / Courtesy of Conservation International

This cute bat has unusual eyes and strange nostrils discovered in 2009 in the forest of Papua New Guinea.

### **Amazon river dolphin**

© Ivan Sgualdini / Shutterstock

Amazon river dolphins, also known as pink dolphins, are usually light gray, but some of them become pink when they grow up. These dolphins are very friendly and easy to train, so they are rarely confined.

Having fun!
