## 2. Visme presentation software

If you want to be professional, Visme is the software for you. This software is used to create professional videos or presentations with the latest improvements of a presentation software.

Visme presentation software interface

### **Advantage:**

1. Can be shared and delegated to multiple people
2. Can publish and grant access to others
3. Variety of templates, icons, images and fonts
4. There is a library to save slides.

### **Disadvantages:**

Full feature usage is charged at a minimum of \$15/month.

## 5. SlideRocket presentation software

This is an online presentation software. You do not need to download and install the software on your computer but can still create a presentation on the supplier's website. It has almost all the basic features of a professional

presentation software similar to PowerPoint with the ability to create beautiful and smooth presentations.

To use SlideRocket presentation software, you need to access the link below and register a new account to use. The provider allows you to use it for free with 250MB of online storage space and 15MB for each uploaded file. If you want to register for larger storage space and fully use the advanced features of this presentation software, you must upgrade to the paid version.

## 7. WPS Presentation software

WPS Presentation is a part of the WPS Office suite developed by Kingsoft, a software company in Haizhou, China. It has a long and successful history in China under the names "WPS" and "WPS Office". Kingsoft later switched to promoting the suite as "KS Office" to gain a foothold in the world software market, but eventually it had to return to the name "WPS Office" for various reasons.

From WPS Office 2005 onwards, the interface of this presentation suite is quite similar to Microsoft Office products. It supports both Microsoft document formats and its own WPS format. WPS Presentation software has left a lot of sympathy for users because of its beautiful and impressive interface that is very similar to Microsoft PowerPoint software. Especially, it is free software and can be used online or offline.

In addition, WPS Presentation also stands out with its support for a large number of templates, supporting various animations, effects and transitions. It is compatible with PPT and PPTX files and supports inserting many different file formats such as Flash SWF and many other video formats.

## 10. RenderForest presentation software

Similar to the Powtoon software that TipsMake just mentioned above, the RenderForest presentation software also operates on a web platform, so you can register to use it anywhere at any time with Internet access. It is a famous presentation creation tool with professional and modern animations.

This software has a simple and friendly interface. You can insert text, sound or effects into the presentation at any position you want. It provides many interesting transition effects between slides and helps users create videos or presentations as well as design beautiful electronic lectures. RenderForest presentation software provides new users with a free version when registering. However, to use all of its features, you must upgrade to the paid version with prices starting at \$20.34/user/month.

## 11. Slidebean presentation software

This is a presentation software that stands out with its integration of artificial intelligence – AI. It has the ability to create algorithms that analyze text and images in designing content according to intelligently optimized

layouts. This saves users a lot of time when creating presentations. Slidebean also has the ability to automatically identify key elements and arrange content appropriately without any user intervention.

The interface of the slidebean presentation software is also quite simple and user-friendly. At the same time, it can automatically synchronize data to support online collaboration between many different users. From there, users can support and share work with each other in a dynamic and professional environment created by this software.

## 12. Bunkr Presentation Software

If you want to create presentation slides quickly and simply but do not want to install it on your computer, Bunkr Online presentation software is an ideal choice for you. Bunkr supports users to create presentation slides online and for free with a beautiful interactive interface and extremely modern transition effects.

To create a presentation with Bunkr, the first thing you need to do is create an account by accessing the link below. If you do not want to create an account and password, you can log in to use this presentation software via your Google or Facebook account. After creating an account, the provider will send you an account activation link to your email. After successfully activating your account, you can freely create presentations by selecting Create a Presentation in the Dashboard.

Similar to the software mentioned above, Bunkr also has a simple and familiar interface with the slide on the left to preview and view the number of slides. In the middle is the image of the slide being worked on and on the right there will be other customization options. During the presentation process, Bunkr will always automatically save changes to the application's cloud account, which will help users save a lot of time and avoid data security when an incident occurs. What a good presentation software, right?

## Bunkr Presentation Software Interface

Above are the top 10 presentation software that can replace PowerPoint for free and are no less professional. If you are wondering whether to buy a license for Microsoft Office's PowerPoint presentation tool or not, try the presentation software mentioned in this article first. Maybe you will find a free software that is suitable for you. Thank you for following the article. Wish you success.
