

# Top 2-in-1 thermometer - Measure body temperature, measure bath temperature, drink milk for your baby

The best 2-in-1 thermometer - just measuring body temperature, measuring the temperature of bath water, baby's milk is really very convenient for mom to take care of her baby better. Let's go with Quantrimang to learn the best thermometer codes that are selling best today!

The body temperature thermometer incorporating the function of measuring objects is no longer strange to many women. Especially for families with young children. However, choose the best product and use it safely so that not all women know.

## Why do moms need a thermometer that measures baby bath water at home?

Children have delicate and sensitive skin so with just a little bit of hot or cold water over the threshold of body adaptation, the baby's skin may become red or rash. Many medical experts have shown that the rate of children suffering from water burns is more common than fire burns or other hot objects. If the water is too cold, when the baby bath is easy to be cold, it can cause respiratory infections, bronchitis or pneumonia .

In the traditional way, mothers often use their hands to try the temperature of bath water or milk for babies. However, the feeling of each person's hand will be inaccurate. The same temperature, but the person feels medium, the person feels hot, he feels cold again. Give your baby a bath that cannot determine the standard temperature will make the mother very uneasy, her skin will also be vulnerable. On the contrary, letting children drink milk too hot will easily burn their mouth. With too cold milk, babies are also more likely to have abdominal pain. Therefore, it is very important to control moderate temperature for small children and newborns.
