

Top 3 most impressive hallucinations in 2019, will make you lose confidence in reality

Here are 3 impressive hallucinations that won the Most Impressive Hallucinations of 2019 by the Neural Correlate Association, with the criteria to confuse the human brain.

Here are three impressive hallucinations that have won the "Most Impressive Illusions of 2019" award by the Neural Correlate Association, with the criteria to confuse the human brain. After watching it, you may have doubts about the reality you are living.

First Prize: Frank Force hallucination

This year, the first prize of the competition was awarded to Dual Force Rotation Illusion - Frank Force, an American game programmer.

Derived from the Greek ichthys symbol, a simple figure that can be drawn when standing still at the age of 3, Frank Force creates a spinning fish shape to create a more complex structure. much.

In the video, you can see the ichthys fish icon rotating horizontally from left to right but when you look for a while you can see it rotating from right to left or vertically rotating from bottom to top or from top to bottom . When you look long enough, you will see all 4 different scenarios taking place in turn that make you do not understand what is happening.

Second Prize: Color Changing Illusion (Haruaki Fukuda)

The "Illusion of Color" by Haruaki Fukuda from Tokyo University was awarded second prize.

In this illusion, we see the red and green dots moving from top to bottom, but if viewed long enough, it could be the yellow dots moving from left to right.

Third prize: Rotating illusion (Ryan EB Mruczek and Gideon Paul Caplovitz)

Spinning illusion - created by Ryan EB Mruczek and Gideon Paul Caplovitz. Mruczek and Caplovitz initially created a black circle rolling around a small continuous white dot. But when placed in the middle of some movement of the other black circles, the viewer will see the movement trajectory of the original black circle completely changing, be it from top to bottom, maybe from left to right or follow the 3 sides of an invisible triangle.

But in fact, the original black circle just rolled around a point, the other movement is just that your brain is confused.

1. The visual illusion that makes black and white images this color will make you bewildered
