SET UNLIMITED TARGETS

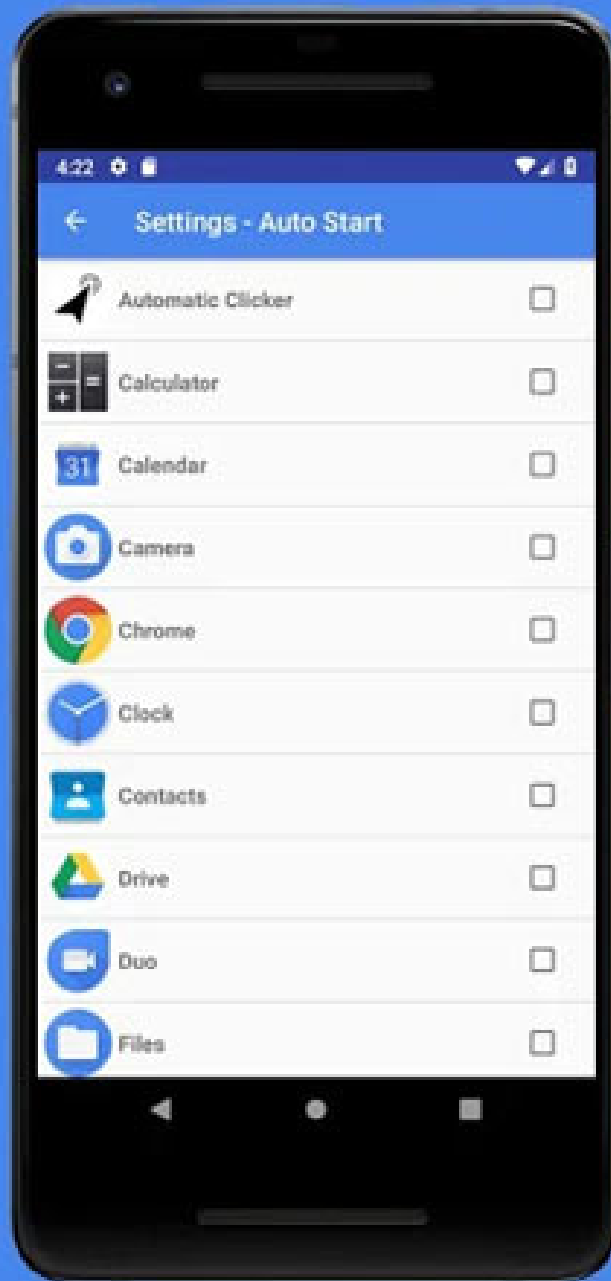

Download the Automatic Click Application for Android

Auto Clicker will automatically click, press or swipe any position on your screen at any time you set. This Auto Clicker application will not require you to be rooted on devices running Android.

If you need a continuous action, you only need to grant the app an override to other applications so that it can overlay on other applications. Press repeatedly on the same button or click anywhere in the fastest way possible.

The application is provided by SimpleHat team for free all the features. If you feel uncomfortable with the ads in the app, upgrade the package to a comfortable price.

CAN START AUTOMATICALLY
WORKS IN ANY APP

Some key features of **the Auto-Click Application** :

1. Each click point is fully programmed.

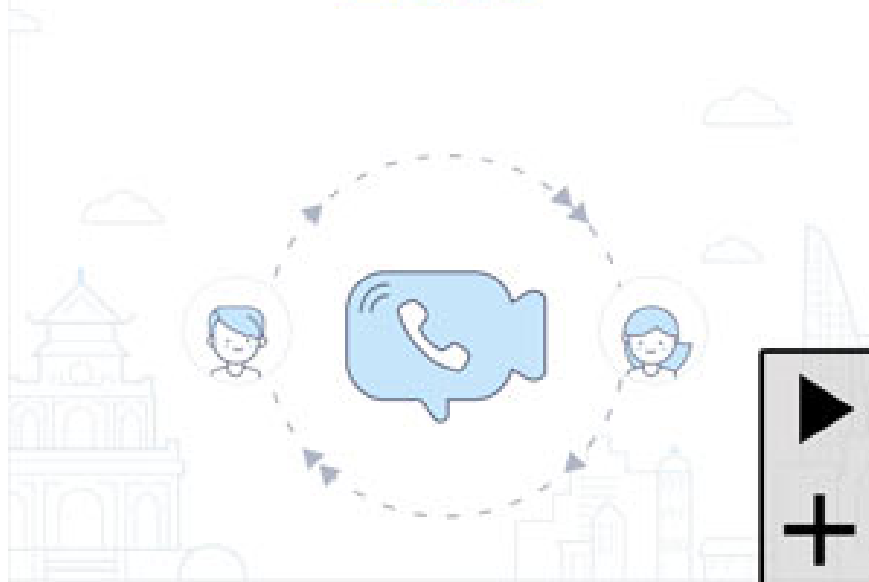

2. Set the stop time for the set movements.
3. Easily save and download any auto-click settings you've programmed.
4. Randomly click and click through rate and many other features.

To use the application, grant permission for the application to be displayed on other applications. Then in the main interface, click **Start: Select multiple target mode** . Immediately a small tool panel will appear as shown below.

You can press the plus sign to add a click, it will follow the order, move the click point to the position you want to click multiple times. If you just click at a continuous point, you only need to add one click to that location.

Likewise, if the application you are using requires a lot of clicks, add more points to automatically click. Next press the top triangle button to run automatically click, of course the click point will be done according to the sequence number of the click point, then will repeat from the beginning.

Tapping

[Download Tapping for Android](#)

Tapping is also an application that helps you set up auto click points in the simplest way. The app has a control panel and you can set your preferences with indicators like click frequency, click hold time, distance between clicks, swipe time .

There is a drawback that many people dislike Tapping, which only supports Android 7.0 and above.

To use the Tapping application, grant permission to overwrite other applications, then click Start in the main interface. The control panel will automatically click on the left, click the plus sign to add a click.

Next place a click on the point you want to click automatically on the app, then click the top triangle icon to run automatically click. If you want to add more click points you can press the plus sign to add the number of click points, the click will be done in sequence number on the click point.

For the application to work, launch the application, select the task you want to automate. Then select Add Macro, here you will have items like **Actions**, **Triggers** and **Constraints** . These items will help you automate the following convenient tasks.

Triggers: Macro Droid gives you more than 70 triggers to launch your macro. That may be automatically activating the device status (battery level, starting or closing the application .). Activate the connection (Bluetooth, Wifi .), activate the sensor (vibration, brightness .).

Actions: You will have more than 100 different actions that you normally activate manually, such as connecting your device to Bluetooth or Wifi, selecting the volume level, causing Google virtual assistant. Alarm timer, blur your screen and more.

Constraints: Optional binding tasks, only done at the time you want. For example, you live near the workplace, but only want to connect to the company's Wifi during the working days. You can select the Constraints option to select the time or date of connection to which the application performs a corporate wifi connection for you. Constraints give you many options such as battery level, connected device .

With auto click applications, the Android auto-click app above. You will not have to manipulate much when playing games, using applications or tasks available on the computer.
