

Top 4 best password management software to use

Remembering passwords for many different accounts always gives you a headache, so to simplify and avoid losing passwords, you can use specialized password management applications and software. , helping you not have to try to take notes, or try to remember the password every time you need to use it. The top password management software below will help you easily remember different types of passwords.

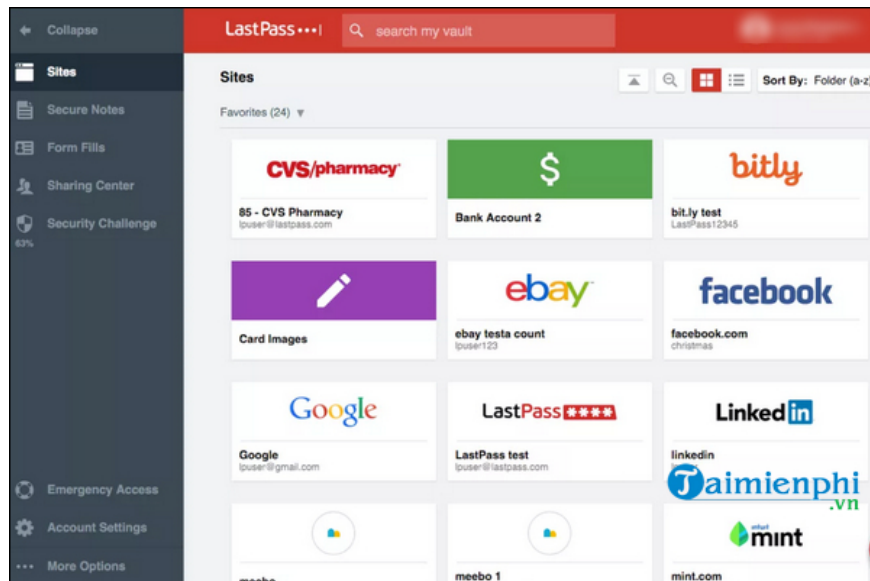

Online accounts today are secured with usernames and passwords. For each different account we should use different passwords, such as bank accounts, facebook accounts, email addresses. if the website's database is hacked and the password stolen or simply your password is stolen, hackers can access all of your accounts. This is the main reason you should use a different password for each account.

Having a different password for each account means you can't remember them all, and you need to store it in a file (e.g. Excel) or better yet in a specialized application called a password manager. password.

Below is a list with the 4 best free password managers.

1. LastPass

A popular app that not only stores passwords and logins, but also increases your productivity by automatically filling in login details when it detects a website with a profile saved on your LastPass account. You can import passwords from another program, if you have previously used a password manager. Includes a password generator, which is constantly updated and has a modern look and concept.
