

# Top 5 apps to teach chess on mobile

Humans have been playing chess for more than 1500 years, but today we still find new ways of playing and strategies for this intellectual sport.

The proliferation of free apps, the massive global competition on Twitch, and the cultural trend have made people play chess more often than before.

If you are also interested in this intellectual sport, you can refer to the chess apps below on your phone.

## 1. Learn Chess With Doctor Wolf

Learn Chess With Doctor Wolf is a great app for the beginner or the average player, for advanced players it is practically nothing but a refresher course.

For those looking for more advanced practice, visit the **Lessons** site . Here you will see different practice sections like **How to Castle** and **Connecting Your Rooks** .

The lessons will be divided into sections including **Beginner** , **Intermediate** and **Advanced** . You can start from any category and choose to your liking (save a few **Advanced** lessons as a prerequisite).

If you want to play games with AI, the **Game** section will let you play chess for free.

If you buy the premium version, Dr. Wolf guides each move and teaches you directly. You can take a guided 3-time trial. After those three attempts, you can still play with Dr. Wolf but will no longer receive useful tips

during play.

If you press the three dots to the right of the **Undo** button , you'll find a list of actions and options. You can adjust the intensity of the game if it feels too easy or too difficult. One of the most interesting features is **Training with Dr. Wolf** , here Dr. Wolf will look at your moves and come up with specific custom scenarios for improvement.

If you do not like the character Dr. Wolf, the instructor-led feature allows you to switch among 3 other characters.

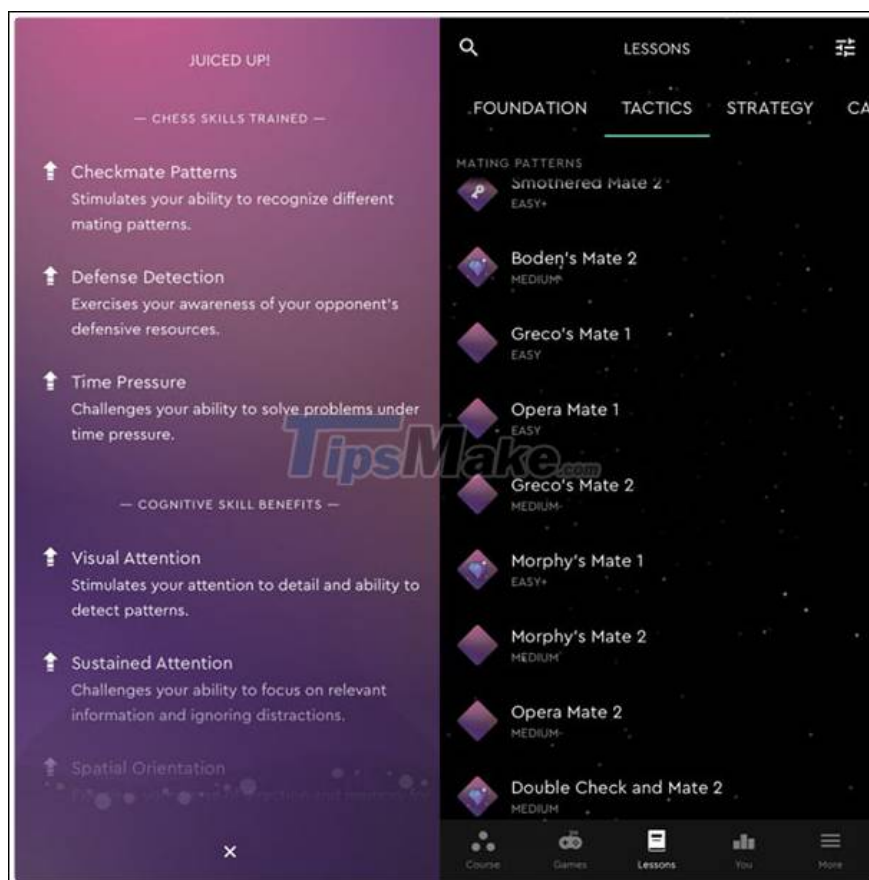

Return to the main game screen page, click on the three ellipses in the right corner, you will see the **Stats and Achievements section** with all the information and achievements you have been while playing the game.

## 2. Magnus Trainer

You've probably heard the name Magnus Carlsen, chess grandmaster, champion of the World Chess Championship. The Magnus Trainer application has been developed to guide people in the way Magnus plays.

The **Course** section takes you from beginner to advanced, making it easy to play with friends and family.

You will have to finish in order unless you sign up for membership, you can choose to start with the **Basics** , **Easy** , **Medium** or **Hard** categories . There is a tip from Carlsen at the beginning of each lesson that will be recorded in the documents section.

The **Games** page is divided into **Foundation** , **Tactics** and **Calculation** sections , allowing you to play short games to get familiar with the pieces, problem solving and general knowledge of chess.

The **Lessons** section is a treasure trove of information about any aspect of the game you would like to review. Although there is a range of lessons available for free, many are available only with registration.

The lessons are broken down into different genres, such as match-making or opening moves.

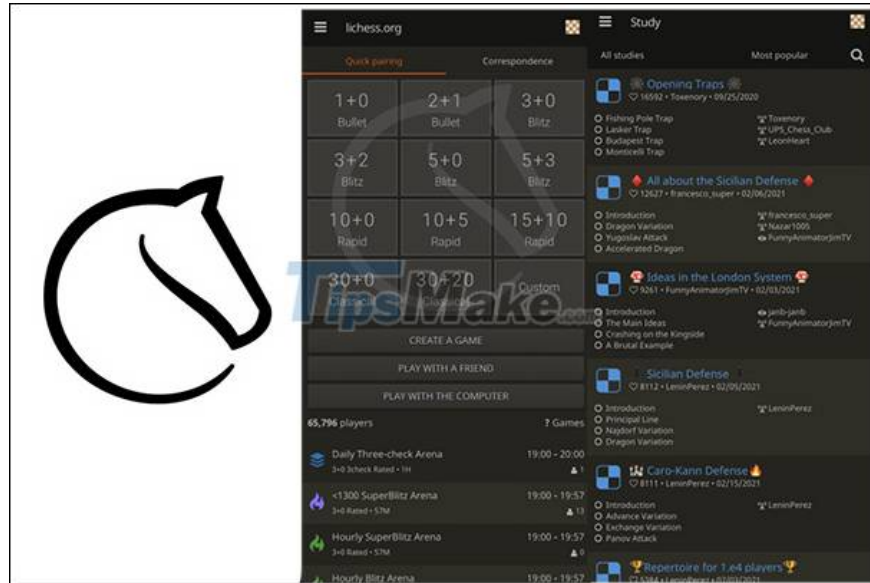

The **You** section shows your graph of statistics in each field of play. This is useful for seeing which areas you should improve and how far you have improved over time.

### 3. Lichess

No matter how many theories you have learned, you still need practice to improve your level - lichess is a great free option to play chess online from your iPhone or Android, especially all the features of lichess. are completely free.

The main dashboard might look a bit 'intimidating' to new users. However, don't worry if you understand the layout. A quick match, a board header with labels like **1 + 0 Bullet** and **3 + 0 blitz** , takes you into a multiplayer game based on the rules you choose.

**Bullet** , **Blitz** , **Rapid** and **Classical** refer to the amount of time each player has to make their moves. For example, **Blitz** is usually the three-minute time limit per turn. Numbers like **1 + 0** indicate the time allowed per turn and the time increments are added to your watch at the end of the respective turn.

So **10 + 5** means each player has 10 minutes to complete their turn and a difference of five seconds is added to the clock when they complete their turn (time is only added if you lose less than five seconds to make your move. If your move takes only three seconds, the remaining two seconds will be added to the watch).

You can create games, play with friends with lichess or play against the computer.

Scroll down a bit deeper and you will see the puzzle for the day. This is a fun way to improve aspects of the game you might not even have thought of.

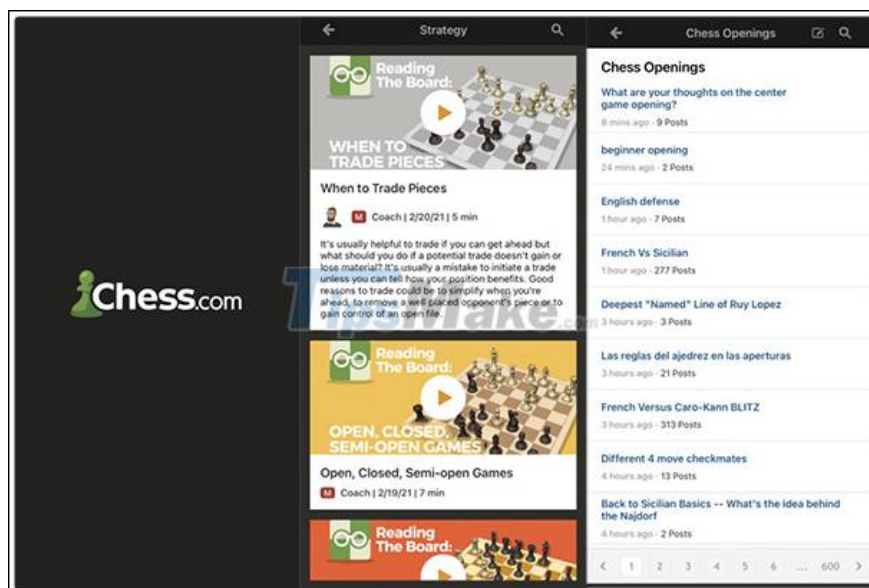

Pressing the **Menu** button at the top left will display a list of other features available on the calendar. Click **Puzzles** to get a random script. The **Study** section gives you access to information, you can learn about real-world strategies like **Sicilian Defense** and **Queen's Gambit**.

You can play a game online on this app, your opponent will be a computer or install a game so your friends can play with you.

## 4. Chess

Chess from Chess.com is another outstanding app for playing chess online. You will find common methods of playing such as online play, computer play, and puzzle solving to train your brain.

You will also find some valuable features that are unique to the Chess app, such as the **Videos** section, which contains a ton of videos by high ranking chess players focusing on specific aspects of the game.

The **Forum** section is a place for players to ask questions and share information regardless of skill level. Want to see expert level game analysis or find out a solution to a puzzle you just can't seem to get past? **Forum** is where you need to go.

The **Drills** page allows you to choose a game area to work with like **King and Two Pawns vs King** and let you fight the computer in that layout.

## 5. Chess Tactics Pro

Chess Tactics Pro is a simple app for people who just want to solve puzzles. Instead of a bunch of different features, Chess Tactics Pro focuses on doing the basics well.

The **Daily** tab updates six new quizzes (each with easy, medium, and difficult levels) every day. The **Puzzles** page has over 300 puzzles to choose from. When playing any of the puzzles, you can click on the **Analyze** item in the top right to see exactly what moves are, or the question mark icon at the bottom right to get hints.

The **Progress** section creates a puzzle to match your current skill level - winning increases your Elo rank, losing is reduced.
