

# Top 5 best charging stations 2021

A good charging station can help your device operate stably, capable of charging multiple devices at the same time. Multiple gateway options are very useful for families with a lot of electronic devices or offices or businesses.

The station can be wired, wireless, or both, allowing you to charge your phones, tablets, smart watches and many more. Most of the charging stations in the list below have equivalent power sources, full of Lightning ports, micro USB, USB-C cables, they will differ in certain functions. In the article below, TipssMake will introduce you to the top best charging stations today.

## 1. SIIG Smart 10 USB ports

The charging station from SIIG has an eye-catching design, with up to 10 different USB ports for charging. These ports can detect optical output power to various devices and automatically turn off a series when the unit is fully charged. The output connection doesn't slow down when you plug in multiple devices at the same time, which is a big plus. The charging station also has eight soft silicone pads to hold your phone, tablet or any other device under 0.75 inches thick.

With devices such as smart watches or wireless headphones, SIIG has its own non-slip charging table with LED lights below, which can be turned up and down. Unfortunately, this station doesn't come with its own charging cable, so you can either use your existing cable or buy a short set of USB cables to get rid of any messy wires.

## 2. Vogek 5 ports

Vogek Charging Station is a 5-port USB charging station with a total of 8 cables to charge phones, tablets, smart watches, AirPods and many other devices. It has 4 Lightning cables, 2 micro USB cables and 2 USB-C cables, allowing up to 5 devices to be charged at the same time. The cable is short, minimizes clutter and allows you to organize your device neatly.

Total output power is 50W, with 10A output for fast charging and each port can output 2A. Charging stations can also automatically identify connected devices and their charging requirements, providing the right amount of power without overvoltage or overload.

### **3. GUS Eco Bamboo**

Unlike some other devices, the GUS Eco Bamboo multi-device charging station does not contain any internal USB ports or power sources. It's simply a sorting tool that organizes and hides your charging cables. The advantage is that you don't have to go out and buy special short charging cables - you can just use what you already have. The downside is that you still need to plug each cable into the power supply, even if it's a small USB charger hidden inside the station itself.

The bottom is actually a hollow compartment with built-in elastic straps that allow you to stretch the excess wire length and leave only the end poking through the top of the station. This charging station has enough room for five different charging cables, with three vertical slots for phones and two larger slots for a tablet or laptop.

#### **4. Satechi 7 USB ports**

This beautiful looking Satechi charging station has seven USB ports for simultaneously charging all of your mobile devices. There are four 5V / 1A ports optimized for phones and three 5V / 2A ports for tablets and laptops, all with built-in surge protection. Note the device does not include a charging cable. The base unit measures 7.4 x 5.5 inches (compact size for a station with these multiple ports) and has seven 0.75-wide slots with clear plastic divider compartments. Each slot has non-slip silicone handles on the bottom to prevent your device from slipping around or getting scratched.

## 5. Smart charging station Simicore USB

This Simicore charging station has a compact size of 7.3 x 5.1 inches, can instantly merge a bunch of cables and charging plugs. It has six USB ports that support simultaneous charging and has an internal "smart" circuit that automatically adjusts to the optimal amperage of your device. This charging station comes with its own cable. Many equivalent charging stations have USB ports, but you can either use an existing cable (which might be much longer than needed) or buy a new, shorter cable that matches the station. Simicore actually has properly sized cables in the box, including three Lightning cables, one Type-C cable for Android, and three micro-USB cables to support all wireless mobile devices in your home.

The station has six 0.75-inch device slots with clear, illuminated plastic markers to show you the charging status of the connected device. Each slot has a silicon base to prevent slip and scratches.
