In the course of using a computer, we will inevitably encounter software errors, hardware errors, virus infections, etc. All errors can cause unintended consequences, especially lost. out of data. Therefore, to prevent unfortunate cases, we need to regularly back up computer data regularly. The following article of TipsMake.com will introduce to you the Top 5 Backup software, the best data backup today, invite you to refer.

1. NovaBackup software

Download link: <http://novabackup.novastor.com/data-backup-products/pc-backup-software/>

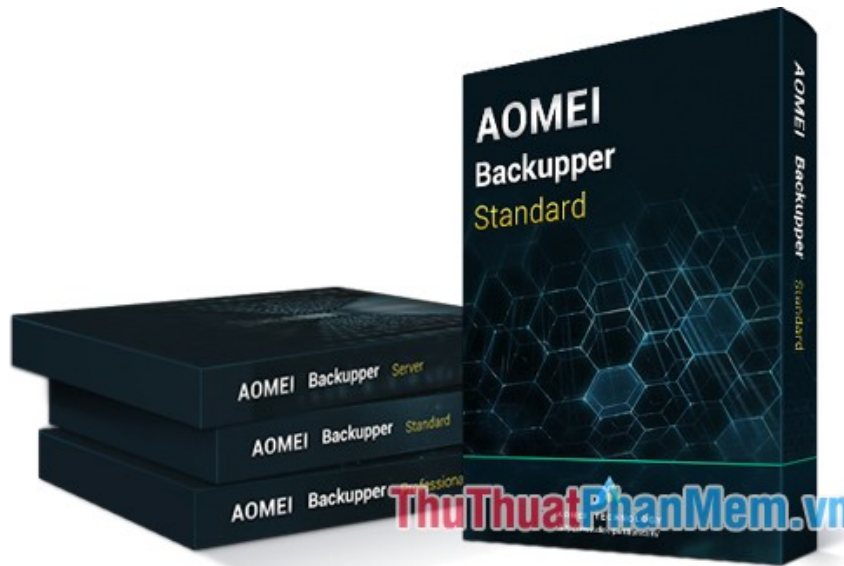

NovaBackup is the best data backup software today and is used by many personal and corporate users. NovaBackup is capable of automatically backing up data in the fastest time, all data on your computer can be

backed up to devices such as hard drives, tape drives, USB drives, CD / DVDs. / Blu-Ray drive. NovaBackup integrates NovaStor technology which allows you to recover data at any time. NovaBackup Pro allows you to create multiple backups and restore them as needed right on the main window of the application, which displays backups and available devices. The virus scanner built into the program will protect your system during backup and data recovery.

2. AOMEI Backupper software

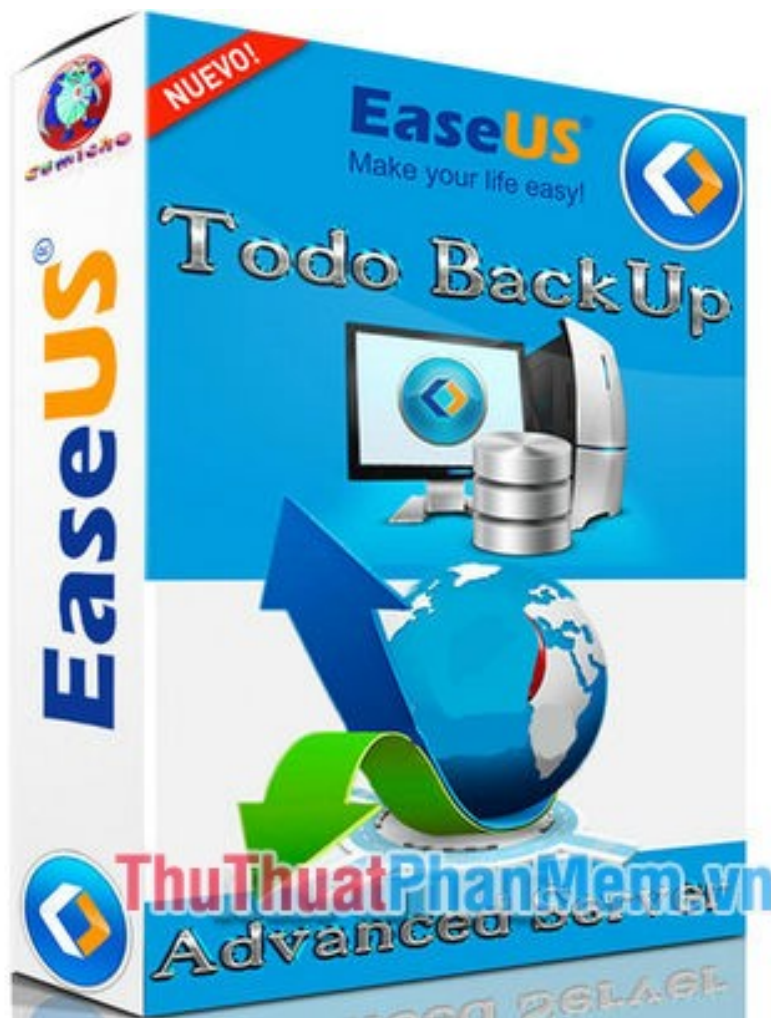

Download link: <https://www.aomeitech.com/download.html>

AOMEI Backupper has a friendly interface, easy to use, helping you backup data easily and quickly. AOMEI Backupper offers a full range of backup options, such as disk, partition and system backup. The program also has many other features to suit your needs, such as options to encrypt or decompress the documents you back up. The program also allows you to recover individual files or folders, or entire drives. AOMEI Backupper also has the ability to clone drives and partitions, making it possible to directly copy a hard drive or a partition to other hard drives and partitions, necessary when you want to replace a new hard drive. In addition, it is possible to resize partitions. The downside of Backupper is that it does not allow users to perform automatic backups. You will have to perform your work manually.

3. EaseUS Todo Backup Free Software

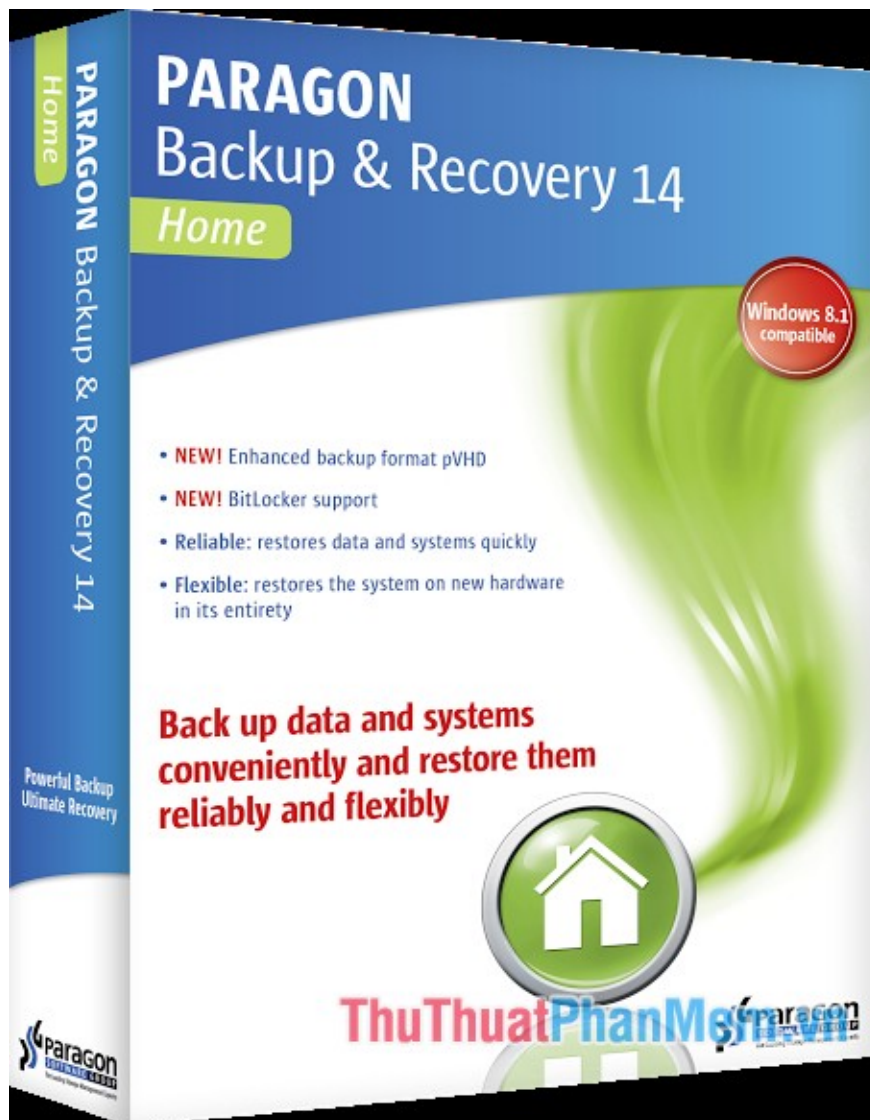

Download link: <https://www.easeus.com/backup-software/tb-free.html>

EaseUS Todo Backup Free is capable of backing up entire drives and partitions on your computer via an image file, creating a copy for various data formats. The software has an incremental backup mode to save time, can schedule backups, copy backup folders to the cloud, and can recover corrupted data. Like the free versions of other commercial products, EaseUS Todo Backup Free has some limitations. However, the features in the free version is often more than enough for ordinary users. EaseUS Todo Backup Free offers both image and file backup solutions, allowing both manual and automatic backups. In addition, you are also provided with the option to reduce the write speed so that the backup does not affect too much the system performance.

4. Paragon Backup & Recovery Software

Download link: <https://www.paragon-software.com/free/br-free/>

Paragon Backup & Recovery allows backing up files and folders on the system, even the entire hard disk and operating system. The unique feature of the program is that it provides you with another partition called "capsule". This is a separate partition to help you preserve the data you just backed up more safely. The software also supports direct backup to the virtual drive, integrating many advanced backup techniques and storing backups on a variety of drives. In addition, the data will be restored quickly at any time. The drawback is that you cannot backup incremental (backup changes compared to the previous backup), there is no disk clone tool, the interface is quite confusing. However, overall Paragon Backup & Recovery is still a good quality program worth a try.

5. Genie Backup Manager software

Download link: https://www.genie9.com/Business/genie_backup_manager_Pro/DownLoad.aspx

Genie Backup Manager Home supports fast and accurate backup of common data such as photos, media, emails, files and personal folders quickly and accurately. The software has very high data security features. All backups are 128-bit AES encrypted before storage, ensuring strong data security. Users can set additional zip password to enhance protection for backups. The high level of data compression will save a lot of space for storage devices. In particular, Genie Backup Manager Home is capable of backing up the Windows registry, favorites, Outlook data and system files that few programs can do. Thus users can restore intact all the state features of the system after the problem.

Above are the top 5 best data backup software in 2020 according to TipsMake.com. Hopefully through this article, you will have for yourself a choice that suits your needs. Thank you for watching the article!
