

Top 5 best Netgear routers today

Netgear has long been famous for its excellent routers and modems. The current product line is definitely the best hardware that Netgear wants to introduce to its users.

Netgear has long been famous for its excellent routers and modems. The current product line is definitely the best hardware that Netgear wants to introduce to its users. With some of the fastest routers for gaming, along with some low-cost options for non-financial users, there's no doubt that Netgear has a lot of products. Product router, meet the needs for everyone. The list in today's article has the best NETGEAR routers on the market at the moment. Let's find out later!

The 5 best Netgear routers can be purchased at the moment

1. Netgear Nighthawk Pro - The best gaming router
2. Netgear R7500-200ANS Nighthawk X4 - Optional with best value
3. Netgear Nighthawk AC1750 - Choose with the best price
4. Netgear Nighthawk X4S - Optional with the best stream capability
5. Netgear Nighthawk X10 - Options with the most eye-catching appearance

Netgear Nighthawk Pro - The best gaming router

As one of the best rated gaming routers on the market, Netgear Nighthawk Pro is the exclusive choice for gamers. Its hardware includes gaming-specific features such as QoS, prioritizing gaming devices on the network, giving them the best signal and allocating any additional bandwidth to eliminate latency. . The game dashboard helps to display real-time bandwidth usage, so users can minimize ping time. Besides, VPN gaming allows instant connection with any VPN client, to maintain security and privacy.

Monitoring network signal strength is easy through Netgear smartphone application and 1.7Ghz dual-core processor to maintain hardware performance and support the demand for online gaming traffic. With 4 external antennas to increase signal strength, Nighthawk Pro adds MU-MIMO and Quad-Stream technologies to further enhance the gaming advantage. In addition, the total network speed on the 2.4 and 5GHz bands reached 2.6Gbps. Can tell Netgear Nighthawk Pro, you have found a gaming router worthy of the money you spend.

Netgear R7500-200ANS Nighthawk X4 - Optional with best value

When it comes to a great combination of performance, price and quality, the Nighthawk Xgawk Rg600-200NAS Netgear R7500-200NAS is an option that anyone can ignore. X4 is designed to operate with the best performance, achieving speeds of 600Mbps on the 2.4GHz band and 1,733Mbps on the 5GHz band. Four-way Wi-Fi (4x4) architecture is ideal for playing games without lag or streaming 4K on Netflix. Besides, MU-MIMO technology helps to transmit signals directly to all connected devices to increase the intensity and stability for Wi-Fi connection.

On the inside, the X4 hardware is equipped with a 1.4GHz dual-core processor to minimize the loss and maintain coverage. In addition, the hardware works concurrently with Dynamic QoS to enhance gaming connectivity. Four external high-performance antennas are equipped with Beamforming + technology, which enhances signal strength and helps navigate the bandwidth accurately to the devices that need it most.

Netgear Nighthawk AC1750 - Choose with the best price

Compatible with Wi-Fi 802.11ac, the Netgear Nighthawk AC1750 offers speeds up to 450Mbps on the 2.4Ghz band and reaches 1,300 Mbps on the 5GHz band. With the ability to simultaneously support up to 12 devices at the same time, Nighthawk provides extremely easy setup via its smartphone application. There, parents can find a variety of control features and options to create guest networks, as well as update routers with the latest firmware to help improve security and performance.

Netgear Nighthawk AC1750 is also compatible with Amazon Alexa and Google Assistant, so users can use voice commands. The Nighthawk has an internal dual-core processor, providing power to the hardware to help maintain stable performance. Three external high-performance antennas can be adjusted towards the appropriate location for the device (such as a desktop or TV), to improve signal strength and coverage.

Netgear Nighthawk X4S - Optional with the best stream capability

If you're a streamer, you'll want to take a closer look at the Netgear Nighthawk X4S. With speeds of up to 800Mbps on the 2.4Ghz band and reaching 1.733Mbps on the 5GHz band, the X4S adds Dynamic QoS to play games without lag, plus stable 4K video streaming capabilities. The introduction of MU-MIMO technology even further enhances signal stability during 4K video streams, by navigating the performance at devices that are in need of more bandwidth, in order to maintain Maintain signal strength.

Setting up X4S is extremely simple through the smartphone application that can be downloaded from the Netgear website. Therefore, users can set up and start this router within minutes from the first time connecting X4S to the home network. Four pairs of external antennas are equipped with Netgear's Beamforming + technology to increase signal range and intensity, which is very convenient for medium or large area houses.

Netgear Nighthawk X10 - Options with the most eye-catching appearance

When it comes to performance in terms of price range, the Netgear Nighthawk X10 even surpassed user expectations. With an amazing speed, X10 is one of the fastest routers available, using 802.11ac connectivity and reaching speeds of 7,200 Gbps on 2.4 and 5GHz bands. The internal hardware is controlled by a 1.7GHz quad-core processor, suitable for 4K streaming, VR game play, web browsing and many other activities.

Including the Dynamic QoS feature adds performance, by prioritizing the available bandwidth for the application and redirecting any unused signal strength to bandwidth-intensive tasks (such as gaming or 4K streaming). Additional features include MU-MIMO which supports simultaneous connections and helps to double the speed of Wi-Fi for mobile devices. Four additional external antennas help increase signal amplification, maximize coverage and Internet throughput, meeting the demand for even the most demanding users.

The above are some of the best Netgear routers that readers can find at the moment. Hopefully the information above will be useful in finding a new router. Wish you find the right product!
