## 1. Pentool WRONG

Pentool SAI is one of the rare tools on the market today pursuing traditional drawing with very fine lines adapted from pencil strokes, brush strokes, . The highlight of Pentool SAI is that connected to electronic drawing board devices to support drawing is much faster and more practical than using a mouse to draw. However, Pentool SAI has a major advantage in drawing anime and hand-drawing, so it is only suitable for a certain group of people. If you have the talent to draw Anime, Pentool SAI will be one of the great assistants to support you to create your own products. Pentool SAI in Vietnam is also famous for having active supportive communities that help people exchange, add knowledge and share skills.

## 2. Adobe Illustrator

In recent years, the trend of painting in the form of Flat (2D paintings) has flourished and the Adobe Illustrator tool has become the favorite tool of the creators of Flat paintings. The product suite from Adobe has never let us down and so does Illustrator when using the Vector drawing system. Other than drawing with a mouse, with an electronic drawing board, Illustrator uses Click and hold the mouse to draw. This helps those who are not skilled can create a unique picture for themselves, only if they have an aesthetic and meticulous eye. Illustrator can be linked to a lot of software and the pen strokes resource resource on Illustrator can never be used up because they are provided by many websites and users.
