

# Top 5 best video cutting software and how to use it

There are many video cutting software, this article will introduce to you the Top 5 best video cutting software today and how to use them.

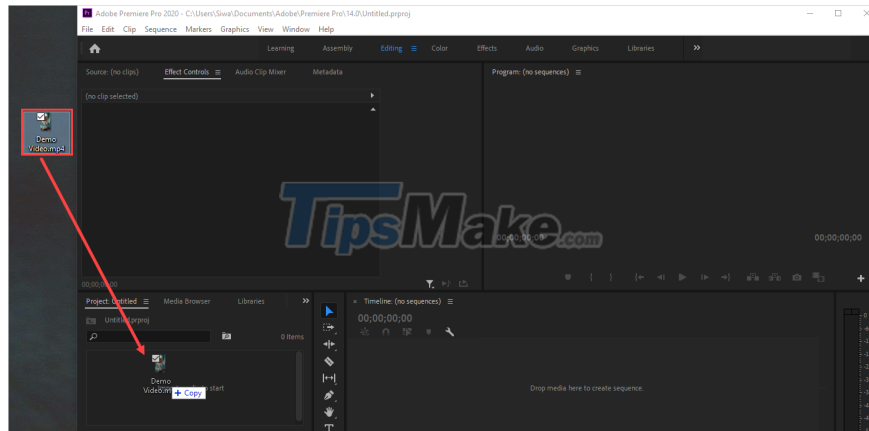

In this article, Software Tips will introduce to you the Top 5 best Video cutting software today and how to use them.

## 1. Premiere Pro CC

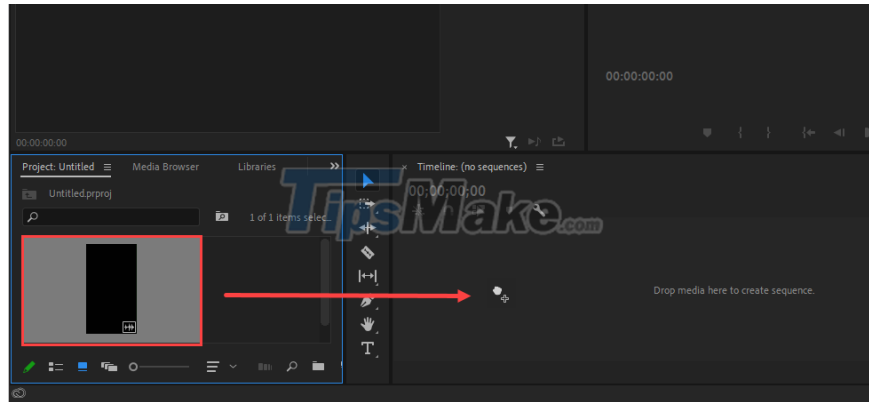

When it comes to high-performance and professional video editing software, [Premiere Pro CC](#) is always the top name. Adobe's most modern tool is now being added with a lot of features to serve many different needs of users. To cut Video on Premiere Pro CC software, do the following:

Step 1: You proceed to download the software and install it to use.

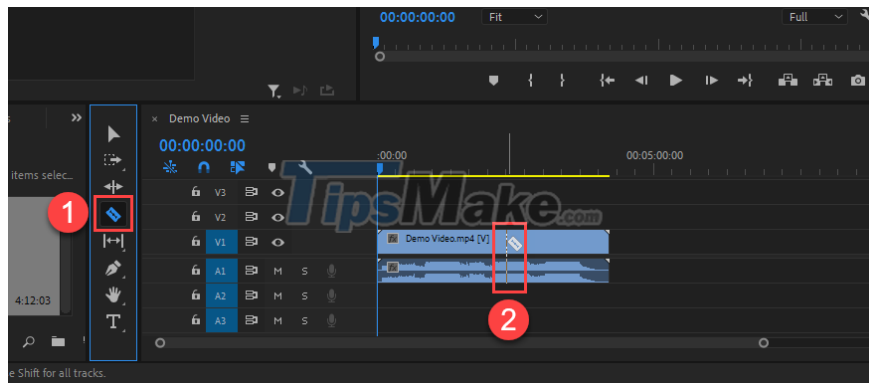

Step 2: At the main interface of the software, you proceed to drag the Video to be cut into the Import section.

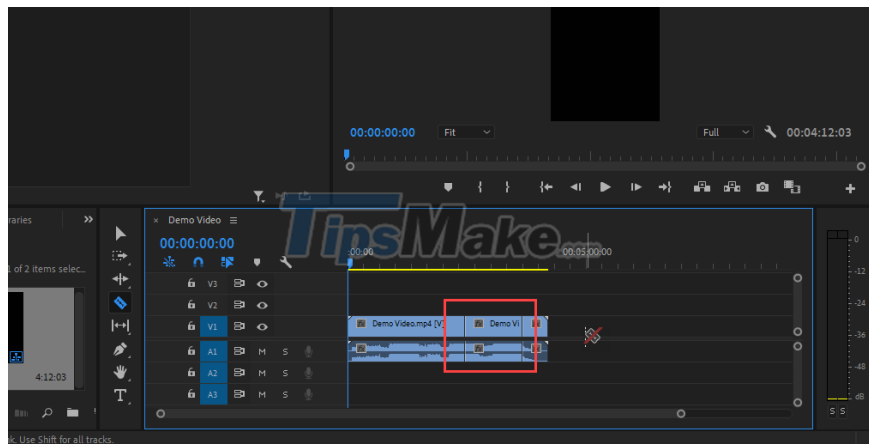

Step 3: After the Video is added to the Import section, you proceed to drag the Video into the Timeline to process the data.

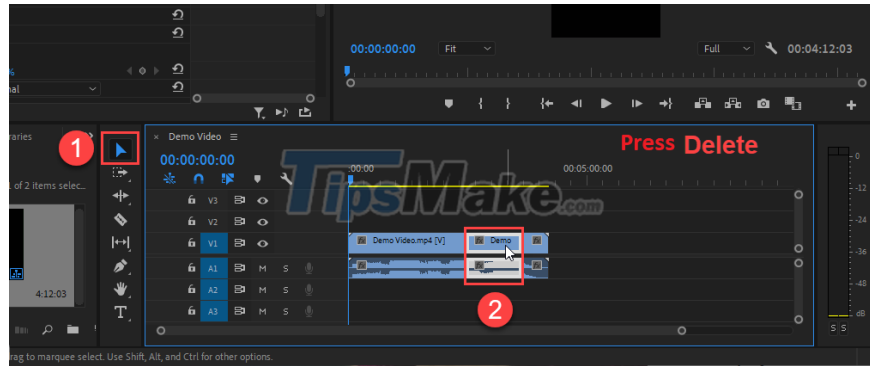

Step 4: Now you need to select the Cut tool (C) and proceed to click on the Video on the Timeline to cut them.

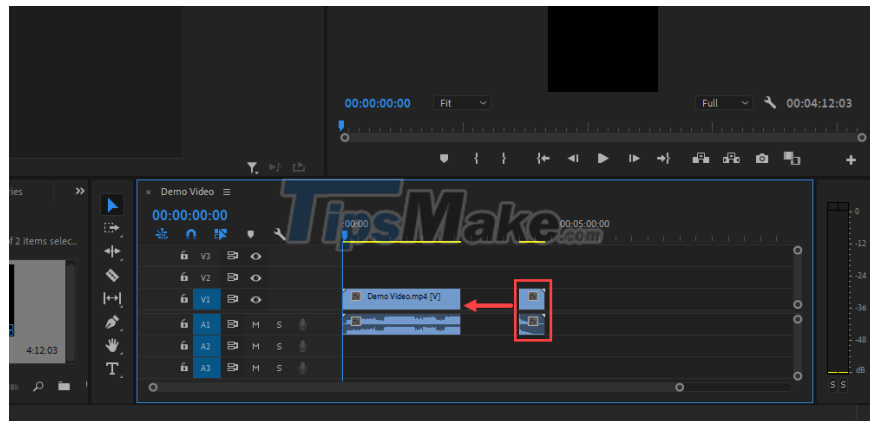

You in turn cut the Video to form the starting point and the ending point.

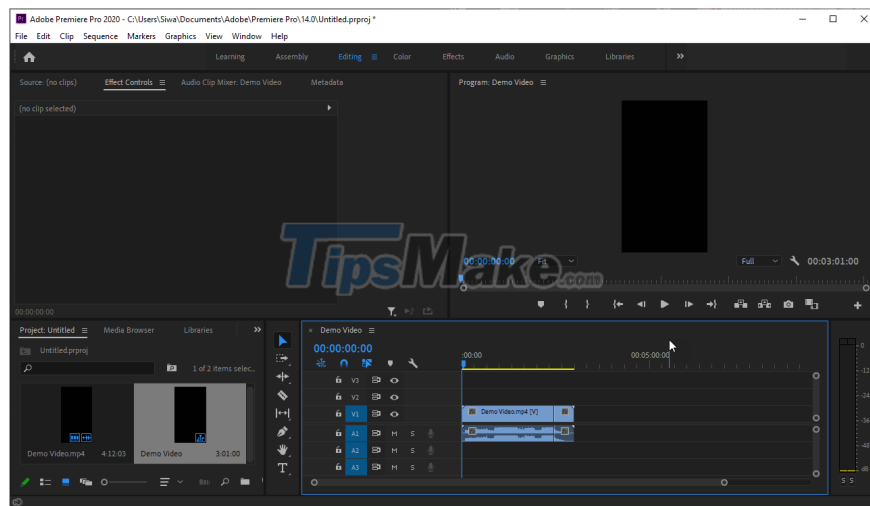

Step 5: After creating the start and end points, click on the Selection Tool (1) and click on the video to be cut (2). Once you have selected the video to cut, press the Delete key to remove the video.

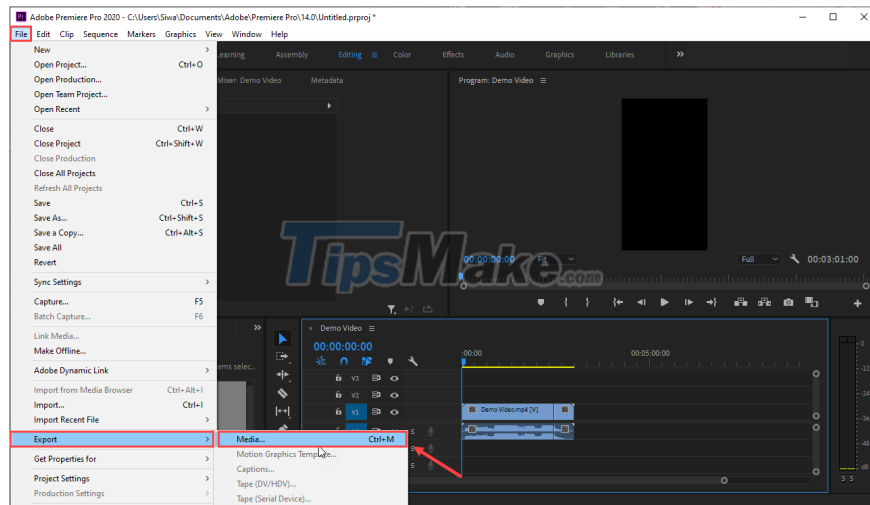

Step 6: When cutting a video, you need to drag the remaining video together to make them seamless.

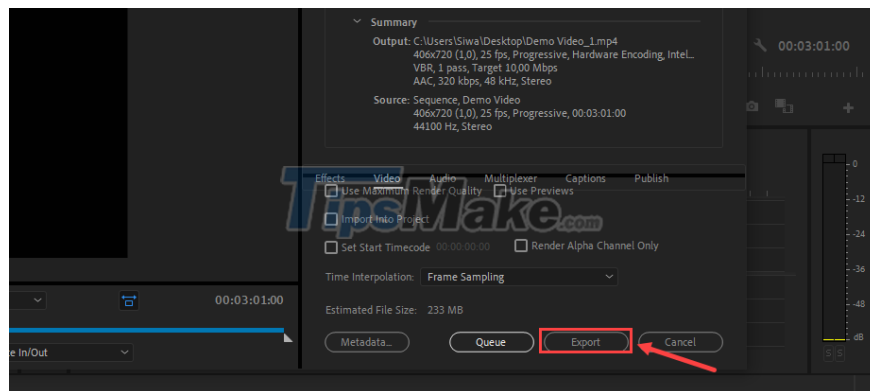

Step 7: So you have finished cutting the Video, the rest is to export the Video.

Step 8: To export the Video, choose File -> Export -> Media... (Ctrl + M).

Step 9: At the Export Settings window, click Export to export the Video.

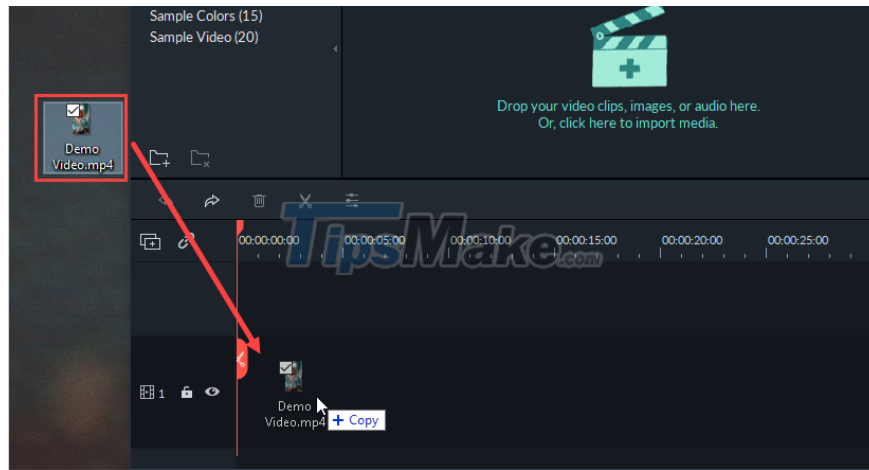

## 2. Filmora

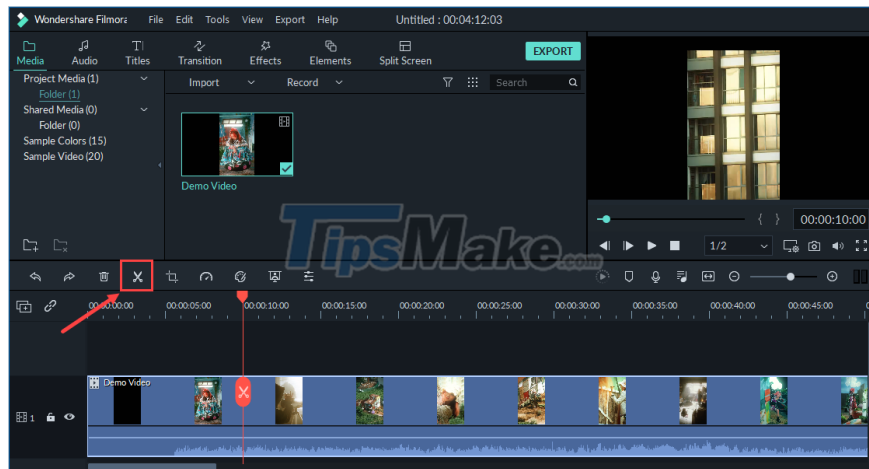

[Filmora](#) is aimed at basic users and does not require too much extensive features for image editing. Filmora tool has full of basic features to support users to edit Videos quickly.

Step 1: You proceed to download the software and install the software to use.

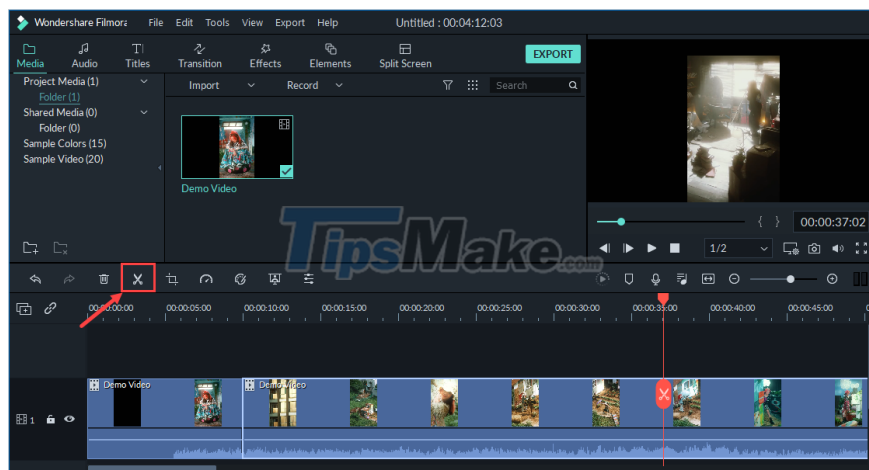

Step 2: At the main interface of Filmora, you proceed to drag the Video to be cut into the Timeline bar to edit.

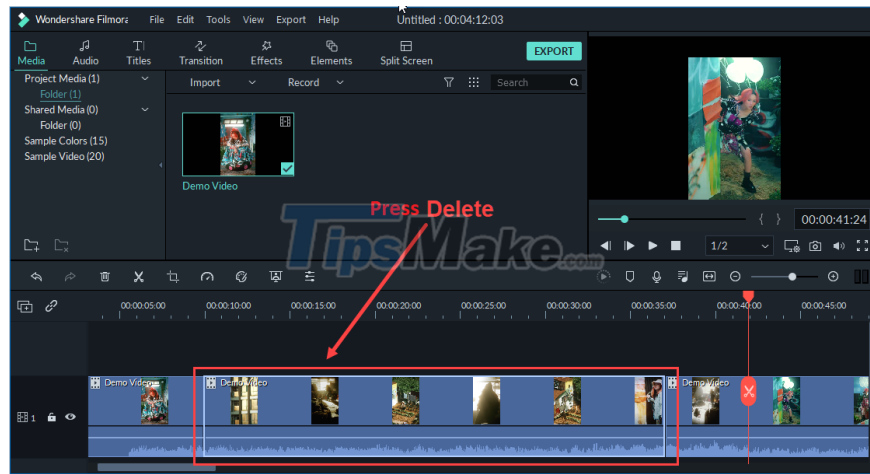

Step 3: After the Video is added to the Timeline, you proceed to select the Cut tool to create a cut point for the Video.

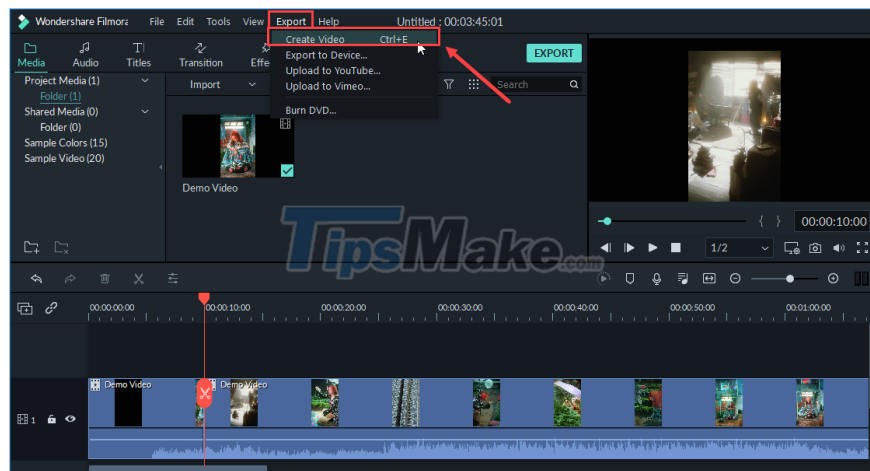

Step 4: To cut the Video, you need to create the start and end points for the Video.

Step 5: When creating the beginning and end points for the video to be cut, press the Delete key to delete them.

Step 6: When cutting a video, the system will automatically pull the remaining video close to form a complete video. After finishing, you choose Export -> Create Video (Ctrl + E) to export the Video.

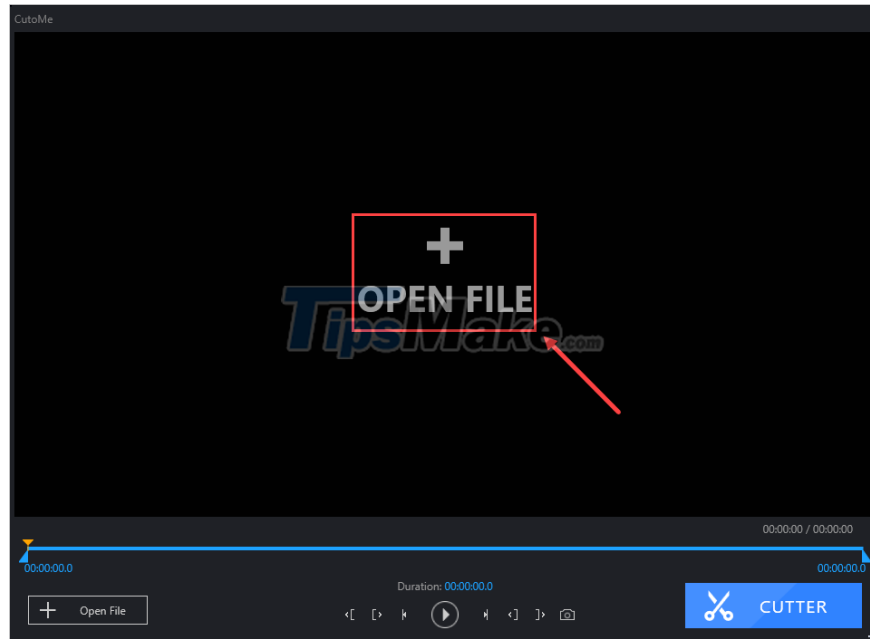

### 3. CutoMe

Contrary to other software, [CutoMe](#) only focuses on video cutting, so using the software is very simple and they are also very light. If your computer does not have a high configuration, then CutoMe is the perfect choice.

Step 1: You proceed to download the software and install it to use.

Step 2: At the main interface of CutoMe, you proceed to select Open File to add the Video to be cut into the system.

Step 3: After the Video is added to the system, you proceed to move the start and end points to form a short Video.

Step 4: After selecting the video to cut, click Cutter so that the system automatically processes.

Step 5: The process of exporting Video after cutting will depend on the length and capacity of the Video.

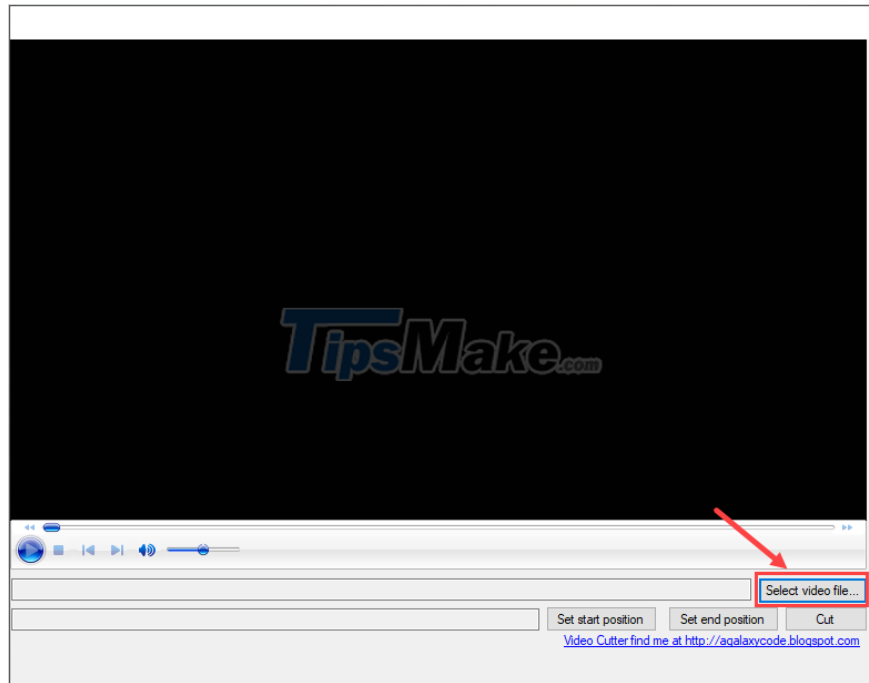

## 4. Video Cutter

If you are looking for a [video cutter](#) that is simple, easy to use and does not require too many other features, then Video Cutter is the perfect choice. Video Cutter software is currently being released for free for users.

Step 1: You proceed to download the software to your computer to install and use.

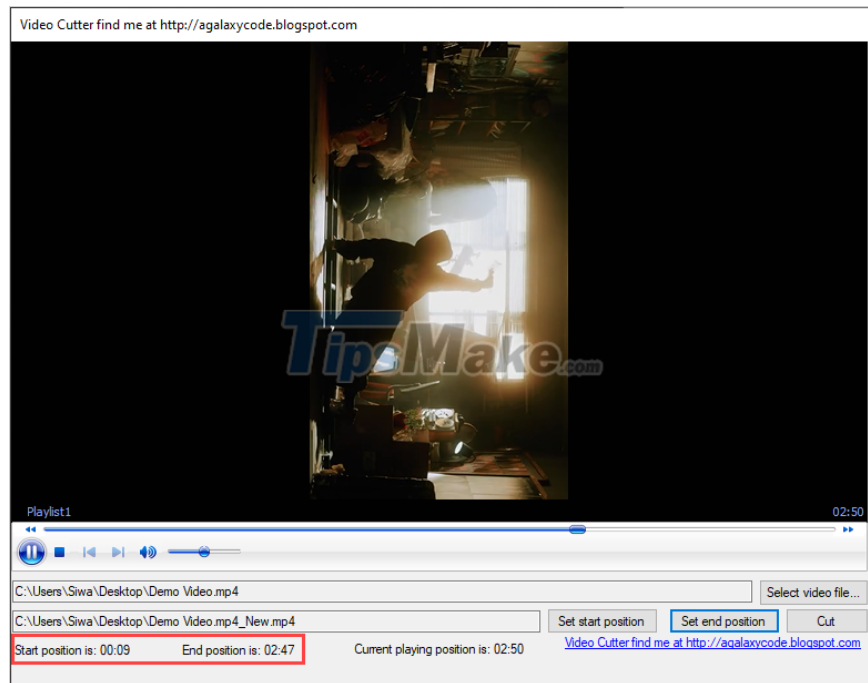

Step 2: At the main interface of Video Cutter software, select Select Video File... to add Video to edit.

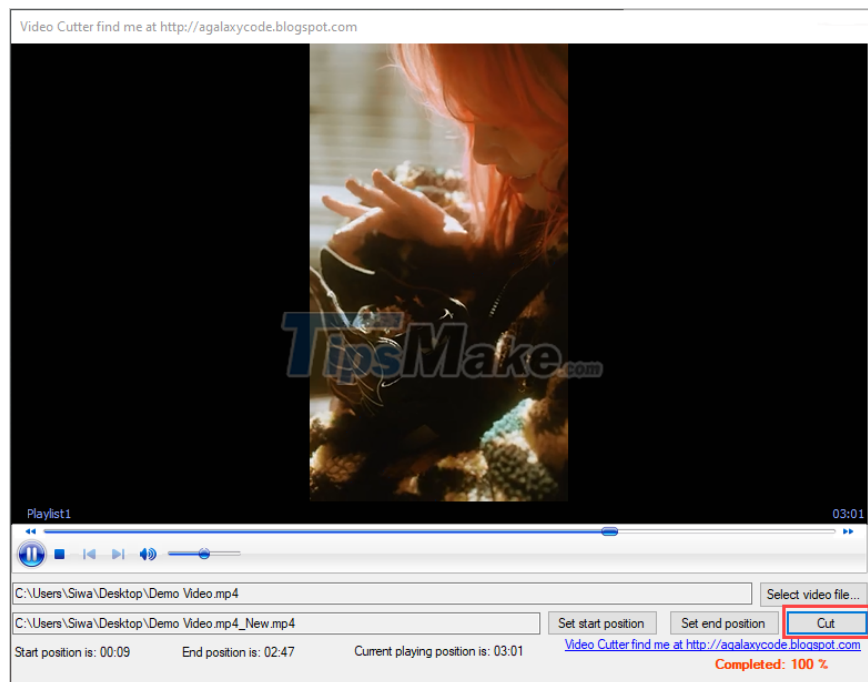

Step 3: When the video is added to the system, you press the Play button to run the Video. During the video running, you in turn click on Set start position (1) and Set end position (2) to create the beginning and end points for the Video cut.

Step 4: After creating the start and end points for the Video to be cut, you can check again with the parameter line below.

Step 5: After checking the cut is complete, click Cut to start cutting the Video.

## 5. Free Video Splitter

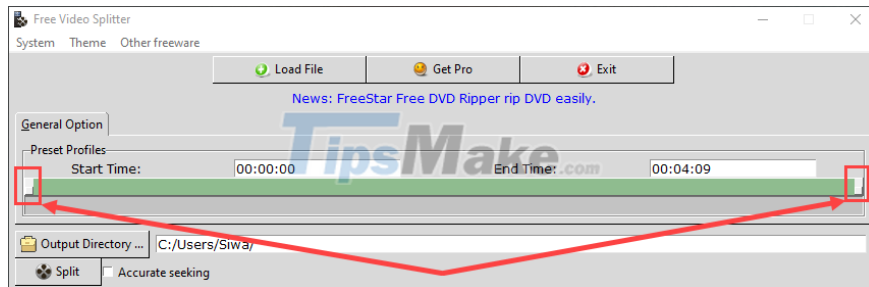

[Free Video Splitter](#) is a simple video cutting software but they are relatively difficult to use because there is no Preview (preview), users will have to cut Videos based on the time coordinates of the Video.

Step 1: You proceed to visit the homepage and download the software to your computer to use.

Step 2: At the main interface of the software, select Load File to open the Video file to be cut.

Step 3: After the Video is added to the system, you proceed to drag the Start and End points to form a shorter video.

Step 4: Finally, click Split to cut the Video.
