

Top 5+ free driver update software

Drivers are software that help computer hardware and software communicate and work together. If drivers are missing or corrupted, your computer will not function properly. Here are the top 5 free driver update software!

Regularly updating drivers is necessary to keep your computer running smoothly, but some beginners will be quite confused with this problem. TipsMake will introduce to you some automatic driver update software. This software will help you automatically update all outdated drivers on your computer, saving you a lot of time and effort. Driver Easy

DriverEasy is suitable for any operating system, the software automatically finds computer drivers and has the ability to update the latest driver version to keep the computer running in the best condition, DriverEasy provides a rich driver database, from the publisher's official websites, automatically downloads and installs for the computer. In addition, DriverEasy also automatically creates backups for drivers to restore when necessary.

Driver Booster

Driver Booster 6, the latest version of driver update software is being used by many people today. With the function of searching, downloading and installing missing drivers for hardware on the computer. Driver Booster integrates a database of more than 500,000 drivers and devices, allowing to remove outdated drivers and create driver backups in case of need to restore.

Driver Talent

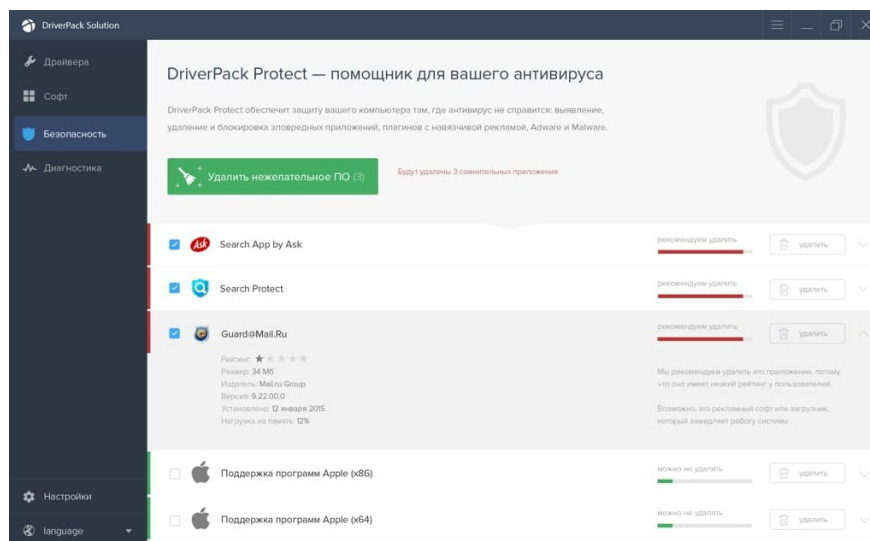

Driver Talent is a widely used driver update software today. This software helps update drivers quickly, saving time. Driver Talent does not create drivers but finds outdated and incompatible drivers, your computer will always be in the best working condition. Driver Talent has two versions for you to choose from: Driver Talent free and Driver Talent Pro for a fee.

DriverIdentifier

DriverIdentifier is a free driver updater that is extremely simple but very useful. You can scan your drivers without an internet connection. Once the scan is complete, DriverIdentifier will help you save the list of drivers to an HTML file. Then just open the HTML file on a computer with an internet connection so that the DriverIdentifier website can cross-reference the results with their database and provide a driver download link.

DriverPack Solution

DriverPack Solution is the software that IT technicians use the most. This software will automatically detect outdated drivers in the system and update them all. This program will help you reduce the difficulty in finding the right driver for each computer model. In addition, DriverPack Solution also has an Offline version with a capacity of up to nearly 13Gb containing all types of drivers for computer models, allowing us to install drivers without an Internet connection. DriverPack Solution also has a disadvantage that during the installation process, there may be some junk software automatically installed.

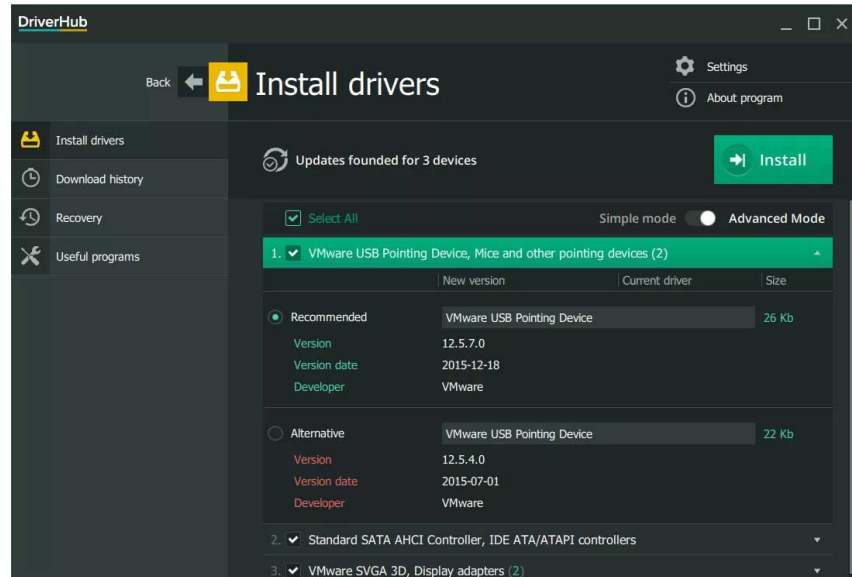

Device Doctor Software

Device Doctor is a simple and easy-to-use driver updater program that includes the most basic set of features: scanning drivers according to a schedule set by the user, then taking the user to the corresponding website to download the new version of that driver.

You can install Device Doctor as a normal software, you can use it as a portable software without having to bother with installation. However, the nature of Device Doctor is to detect faulty drivers and take you to the website where you need to download the update, so you have to manually download and install the new driver yourself.

DriverHub Software

DriverHub is an automatic driver updater software, which comes with a data recovery feature in case of problems. DriverHub's interface is intuitive with a clear menu consisting of only a few control buttons, making it very easy to use.

After scanning and detecting old drivers, DriverHub will make a series of recommendations. You can choose to keep the current version of the driver without updating, or choose to download and install according to DriverHub's recommendations. These new recommended driver versions will also have their version numbers clearly displayed for your convenience in comparison and tracking.

The software also has another sub-feature in the Useful programs section, although it is not related to drivers, it contains some useful links related to other Windows features such as Disk Management, Task Manager, power settings and screen settings, you can refer to improve the performance of your computer.
