## **What is a coffee maker? How do structures and principles work?**

Coffee maker is a device that helps to brew automatic coffee instead of using traditional brewing to speed up and ensure the quality of coffee cups is always delicious and dense. Coffee machine is used not only in restaurants and offices but also used in families, can mix a variety of coffee beans, coffee powder, coffee tablets into many types of Cappuccino , Espresso, Americano, Latte . to meet the diverse needs of users to enjoy this drink.

### **Structure of coffee maker**

A basic coffee maker includes control unit and body.

1. **Control unit** includes on / off switch, coffee function buttons (customize number of cups to brew, automatic cappuccino selection, flavor selection .), indicator light displays installation information or warning. Modern, high-end coffee makers may have additional displays.
2. Basic body consists of coffee compartment, lid, coffee cup holder, coffee pipe, hot water faucet, steam nozzle, cup holder, coffee cup holder, waste tray . Some types of coffee makers may have coffee grinding and whipping parts .

### **Principle of operation of coffee machine**

The coffee maker works based on the vacuum principle:

1. Cold water enters the machine through the rotor, increasing the water pressure.
2. Water continues to go into the boiler of the machine and is boiled.
3. When the temperature and pressure in the boiler meet the requirements for brewing coffee, the water is pushed to the top of the coffee and then infused into the coffee to extract the essence of coffee.
4. Finally, the breaker causes the pressure to change to make the coffee run down the glass.

Coffee maker offers modern lifestyle and utility.

## **What types of coffee machines are there?**

On the market today there are many different types of coffee makers and are often classified based on the features of the machine as follows:

### **Automatic coffee maker**
