

Top 5 home security tech-devices

With the rising crime rate and unsafe environment, the concern for security and wellbeing of yourself and loved ones is also increasing.

Out of all places in the world, your home should be the one where you get that sense of feeling safe and sound. With the age of technology, it has become possible to install security systems that are too good to be true. We have looked into some devices and gadgets that are essential and minimal requirements for securing your home. Let us see what some of them are.

Home monitory robot

Yes, there are robots who can look after you home! These are wifi connected robots that can move around and monitor each and every corner of your house. The robots are connected to the phone devices even and lets you see through it's camera along with audio when you are out of your house.

This serves as a mini bodyguard that is equivalent to a human body guard. It is an intelligent robot and can roam around on its tracks smoothly. There are many tech companies that have made some good home monitoring wifi robots, Riley being on top.

Peephole camera

These are cameras installed in the peephole of the doors that have become very popular lately. Many security experts say that it is very crucial to record any suspicious activity outside your door. Criminal records have shown they would always check the front door before making a dramatic action entry. So these peephole cameras are a game changer in the security industry, for sure. Look out for the best peephole cameras on the market and install one as soon as possible! They are also relatively a cheaper device as compared to other complex security systems.

Digital door lock

A simple door lock has been proved as a failure when it comes to fool proof security. There are too many hacks and tricks for unlocking a simple door lock and so advanced technology has given a new solution to this problem; Digital door locks. There is a passcode entry system in the door locks.

Many security companies have come up with this system where these door locks are fitted with circuit technology that can absorb very high voltage of electric shock as well as heat sensors to help with fire emergencies.

The door automatically opens when detecting temperatures rising above certain degrees. The anti theft feature makes the alarm go off when you are not at home and the door is tried for opening. Some high tech companies make these locks with an automatic lock function that never lets you leave the door unlocked ever again!

Outdoor security camera

This is not just a regular camera. It is one of the smart surveillance cameras out there. It detects what is happening outside your house. Any activity by people, animals or cars can be detected by these cameras. These also notify you in real time if any suspicious activity is reported in your garage or lawn or front of the house.

The quick alerts are sent if anything out of normal is happening like if there is anybody in the driveway or your pet is being moved. So therefore, it is a very useful tool for security even when you are not at home.

Video doorbell

Usually these video door bells are connected with your phone. An app and wifi helps you see who is at the door everytime someone rings the bell on your phone! You do not even have to get up to go to the intercom to see. The videos can also be recorded and be seen later as to who visited your home at which date and time for any security purpose later.
