

# Top 5 most accurate and comprehensive iPhone testing software

Regardless of whether you are buying or selling a used iPhone, you need to test whether its functions are still working properly?

The top 5 apps below will help you test your iPhone comprehensively from screen, sensor, media playback, connectivity.

## 1. TestCODE

TestM is a comprehensive iPhone testing application that makes it easy to assess the quality when buying a used iPhone. The application is capable of fully testing functions to detect anomalies. Best of all, it's completely free.

The application has different test modes related to screen, sound, motion, camera. More advanced, you can test fingerprint, vibration, light sensor and more. Interactive TestM is great for tests and gives you detailed results on what needs fixing.

TestM has a relatively intuitive and easy-to-use interface, which helps you quickly get used to it from the first time.

Main function:

1. More than 20 tests for different hardware
2. Check IMEI
3. Support multiple languages
4. Detailed report of damaged components and repair instructions

## 2. Phone Doctor Plus

Phone Doctor Plus is a reputable iPhone testing app that runs diagnostics of more than 30 hardware functions. The app gives you a more accurate view of your iPhone's condition every time you need to buy or sell.

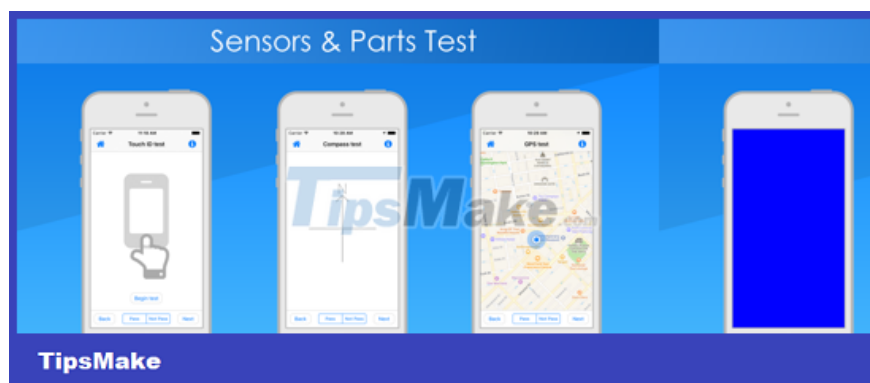

Phone Doctor Plus uses advanced diagnostic technology for more than 30 hardware functions. After performing the test, you get a comprehensive report on all functions including memory, display, camera, etc. The app also has a battery health monitoring system.

Main function:

1. Run more than 30 comprehensive tests
2. Battery monitoring and optimization
3. Monitor mobile data, avoid crossing the threshold

### 3. Test & Check for iPhone

This is a paid app, but its price is not too expensive and worth the money you spend. Test & Check helps you to test almost the entire functionality of your iPhone. So you can use it to test your phone periodically, ensuring the longest life.

Some outstanding tests of the app:

1. Monitor – check brightness, color, touch, dead pixels, etc.
2. Sensors – check sensors for accelerometer, vibration, compass, GPS, distance, etc.
3. Multimedia – test audio, camera, video, etc.
4. Connections – verify connections are at the optimal level for Wifi. Bluetooth, calls,...

5. Other – warranty check, water damage, iCloud sync, etc.

## 4. Phone Diagnostics

Another great app that helps you test more than 15 iPhone sensors and functions is Phone Diagnostics. The application will test all types of sensors on iPhone including multi-touch, microphone, flash, mobile access, etc. The results are displayed intuitively and accurately.

Phone Diagnostics also has a number of interactive tests such as multi-touch test, response paralysis test, buttons, fingerprints.

Unlike TestM, Phone Diagnostics returns test results in color, not a detailed report. Here, red means the function is faulty and green means it is still working fine.

## 5. toolChecker

ToolChecker helps you quickly detect which iPhone functions are inefficient or faulty. The app tests various components including touch screen, Touch ID, speakers.

Although not as powerful as TestM or some other tools, toolChecker returns very reliable results with high accuracy. A very interesting advantage is that toolChecker is ad-free.

Main advantages:

1. Run comprehensive diagnostics

2. No ads
3. Continuous operation
4. High precision

## Conclude

Above are the top 5 most accurate and comprehensive iPhone test applications. Use these applications to monitor the status of your iPhone, or check when there is a need to buy or sell. Good luck!
