To test dead pixels, dead pixels, dead pixels, and display color deviations, the Dead Pixel Locator tool will be your great helper. The Dead Pixel Locator tool now works on ancient LED, LCD and Plasma displays. The usage of the tool is very simple, you just need to download and launch them. Then, you take turns choosing the colors on the system and look closely at the screen to see if any pixels display color difference or not show colors or not.

Although Dead Pixel Locator is a support tool, it still needs user intervention, namely observing the pixels and finding specific dead spots on the screen. However, with the Dead Pixel Locator tool, you will shorten a lot of time.

2. FurMark

In fact, FurMark is not a tool that deeply interferes with screen testing, it is a tool that activates the maximum performance of the GPU on a Laptop, so why recommend them to this list? If you want to check the most detailed screen, then you must FurMark for GPU to operate at maximum performance, this time they will be very hot and if any error, will arise right from here. There have been a lot of cases where the Laptop screen is normal, but when the GPU is running hot, the screen will blink, stripes, screen garbage, .

So the fact that you FurMark to check the screen is completely redundant, they will help you check the output on the screen is stable or not?

3. Dead Pixel Buddy
