

# Top 5 ways to fix the error of not installing apps on iPhone

Are you trying to install or update apps on your iPhone to the latest version but this feature is not working? How to fix the above problem?

## 1. Restart App Store

This is the easiest way to fix problems of unknown causes. First, press the Home button twice, then swipe the App Store app from bottom up to turn it off. Conversely, if you are using newer versions of iPhone (without a physical Home button), users simply swipe up from the bottom of the screen and hold for a second, then do the same as above.

Next, re-open the App Store app, click the avatar icon in the right corner and select Update all (update all).

## Restart iPhone

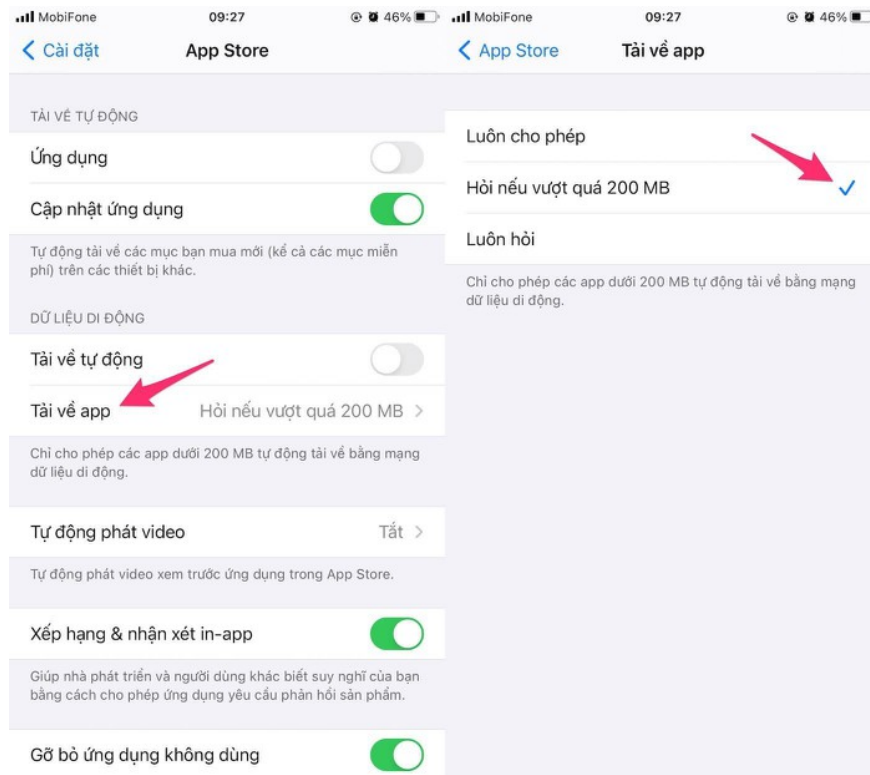

If the problem persists, restart your iPhone by holding down the power button and the Home button at the same time until the Apple logo appears. For newer iPhone models (without the home button), users simply press and release the volume up button, press and release the volume down button, then hold the power button for a few seconds until the iPhone reboots.

### 3. Switch Internet connection

An unstable Internet connection will prevent you from installing or updating apps. Therefore, if you are using WiFi, try switching to 4G or vice versa.

Note, to download 4G large-volume updates, you need to go to Settings - App Store - App Download (download apps) and choose Always Allow (always allow) or Ask If Over 200 MB (ask if over 200 MB).

## 4. Check the running status of the App Store

If none of the above helps to solve the problem, it is more likely that the problem is related to Apple's servers. To check the running status of the App Store, please visit <https://www.apple.com/support/systemstatus/>, if the App Store is displayed in orange, it means that the service server is having problems. try and vice versa, green is normal operation.

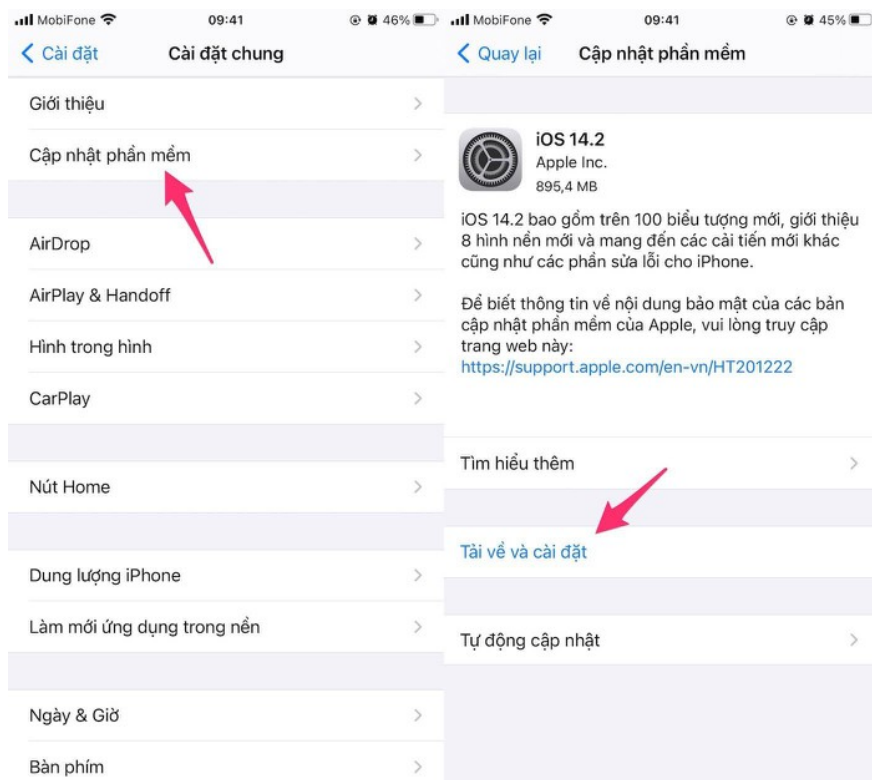

### System Status

System Status		
● Available		
● App Store	● Game Center	● macOS Software Update
● Apple Arcade	● Global Service Exchange	● Mail Drop
● Apple Books	● iCloud Account & Sign In - Resolved Issue	● Maps Display

● Apple Music radio	● iCloud Keychain	● Radio
● Apple Music Subscriptions	● iCloud Mail	● Schooltime
● Apple Online Store	● iCloud Notes	● Schoolwork
● Apple Pay	● iCloud Reminders	● Screen Time - Resolved Issue

## 5. Update iOS

If you still cannot fix the problem related to the App Store, please check and update your iPhone to the latest version (if available).

First, go to Settings - General - Software Update - Download & Install (download and install). Note, the size of the update may vary depending on the device you are using.

In general, here are some simple ways to fix the issue of not being able to download or install apps on the App Store, if you find it helpful, don't forget to share the article with many people or leave a comment Comment when having trouble using it.
