

# Top 5 wifi software from free laptop easy to use should download the most

How to play wifi from laptop? If you use Windows 10, it does not matter, but anyone who uses Windows 7, 8 must find 3rd party software.

If you are using advanced Windows 10, then broadcasting wifi from a laptop is very simple because there is a default app available. But for devices with lower operating systems, we have to rely on the help of 3rd party software.

## 1. Connectify - wifi software from the most popular laptop

You can download Connectify for free and make full use of its features. Software support for Windows 7 devices and above. The reason Connectify has been a top favorite for years is its fast processing speed and proven information security. This app connects well with devices like PlayStation, Xbox, Nintendo DS, . Users are allowed to have full control and control of the wifi network they create from the computer. If you use it to turn your laptop into a daily wifi source, you should buy a paid Connectify membership to enjoy all the features.

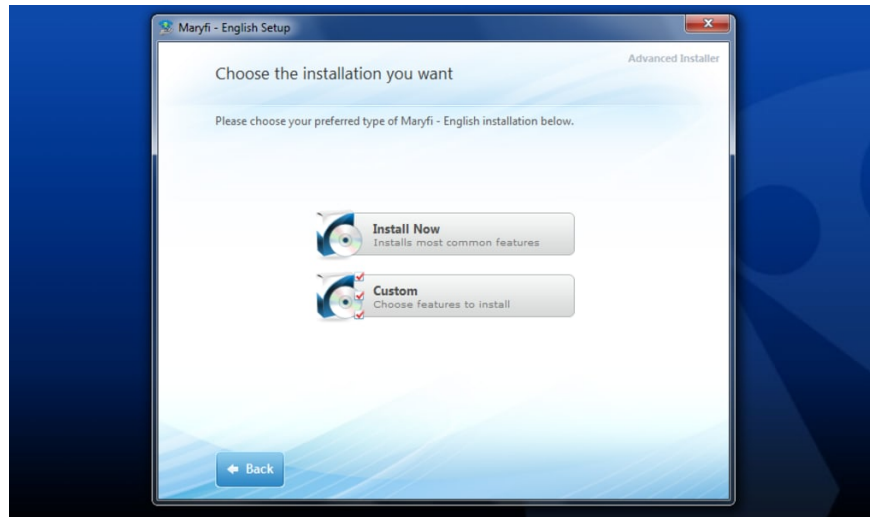

Connectify is the most popular wifi streaming software for years

## 2. Maryfi

The first advantage that many people download Maryfi is because the software supports all operating systems. Maryfi supports both desktop and laptop computers with the same speed and processing capability, with no

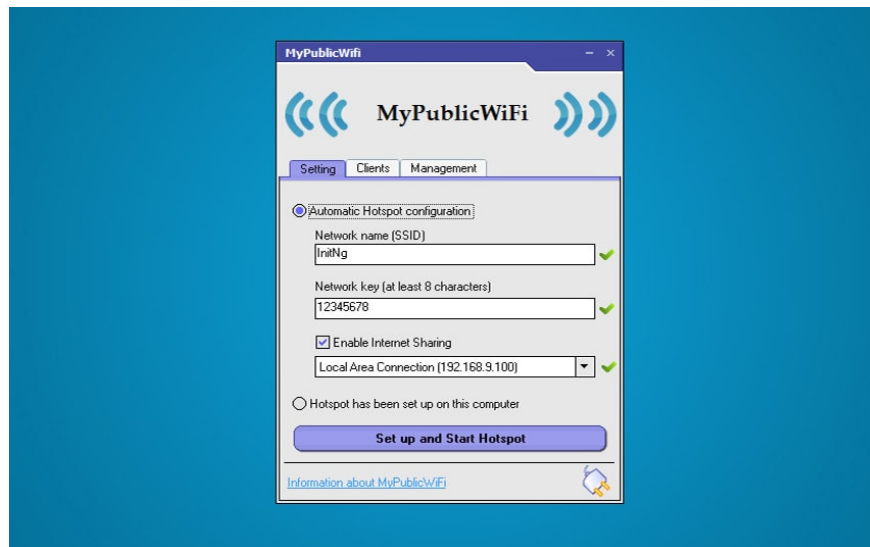

difference. The application can turn your computer into a wifi source for a variety of devices such as phones, tablets, game consoles, . The number of devices that can access the network is unlimited. Even if the network is healthy, you can use it freely in crowded office or coffee shops. However, Maryfi also has a big minus point that users cannot view nor manage the devices connected to the laptop.

Maryfi has the ability to handle smoothly, with few errors and for a stable network

### 3. MyPublicWifi

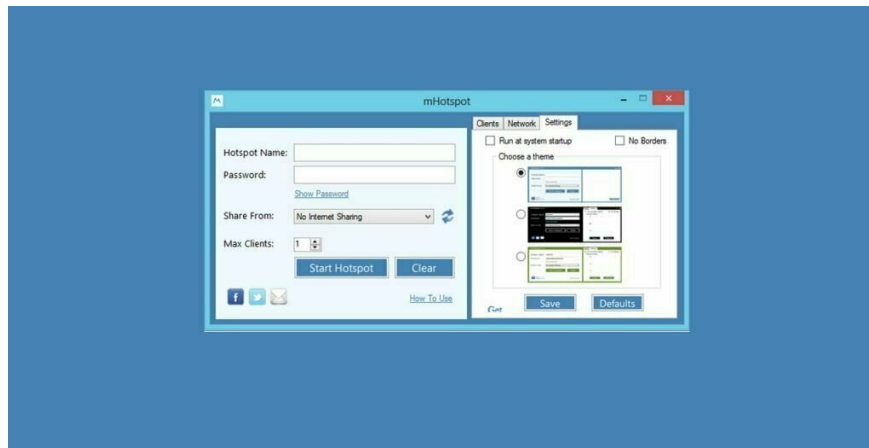

The wifi streaming software from this laptop supports Windows 7 and 8, 10 devices. People download MyPublicWifi software mostly to serve the needs of temporary wifi network in the home or office. MyPublicWiFi of course can still be used daily, but not shared with too many devices and the speed is also average. But in return this software supports multilingual and very friendly interface.

MyPublicWifi is suitable for use on long trips or when you need wifi crew

### 4. mHotspot - software for generating wifi from laptops with many features

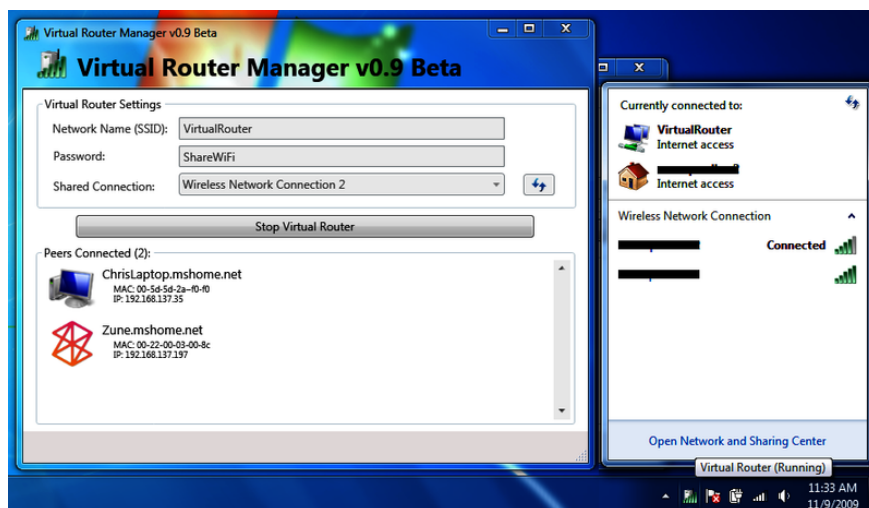

mHotspot is also a software that many people like to talk to now because it supports all operating systems from Windows 7 and up. It can limit the number of devices connected to your wifi source. So we avoid the situation where too many people are connected making the network weak. Specific information such as name, IP address, network speed (Download / Upload), . can be viewed in the application. The above features are still usable even when you use the free version. The security system of the software is also appreciated. Still not over, mHotspot absolutely no ads. So why is mHotspot still not as famous as Connectify or Maryfi? That's because in the process of using the software is often error and a bit slow.

mHotspot many features, modern but a bit slow

## 5. Virtual Router

Virtual Router can be downloaded and used on Windows 7 and Windows 8 laptops, excluding Windows 10. Perhaps this is the biggest weakness of the product. Virtual Router has an intuitive interface, absolutely no ads. The App also does not track user activity history. The software uses WPA2 encryption for security.

If you need high security, please download this software to use

To play wifi from a laptop is not difficult, just download one of the software above. Even if you do not choose these suggested software, you should look to the famous and reputable applications to avoid bringing viruses to your computer or having your personal information hacked.
