2. Touch the back surface two or three times to trigger actions

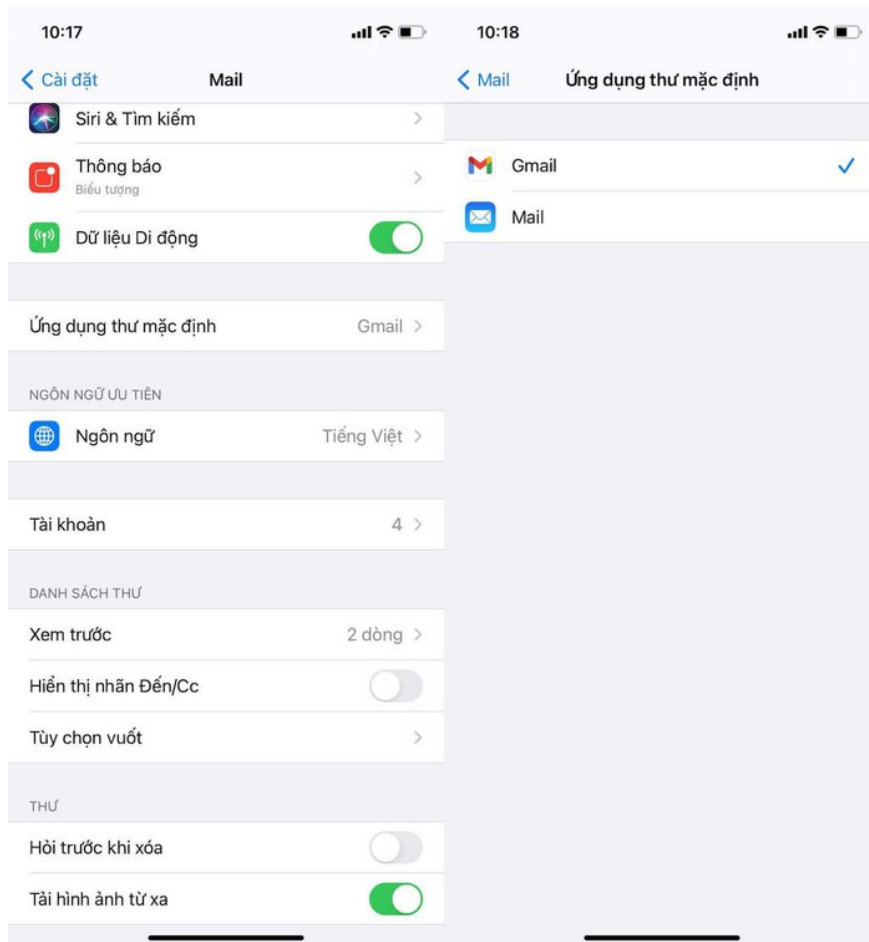

After updating to iOS 14, you can double or triple tap on the back of the iPhone to lock the screen, take screenshots . and many other features.

To activate, go to Settings - Accessibility - Touch - Back Tap and set up a custom feature for double or triple tap actions. on the back of the iPhone.

3. Change your default email client or browser

Previously, you couldn't use email apps or third-party browsers as the default software on iPhone, however, this has changed since iOS 14.

To make your browser or other email manager your default, go to Settings, select the app or browser to use, and set it as default.

4. Hide image completely from gallery

Even if you hide images, Hidden Album still appears by default in the Photos app. You can now hide it permanently by going to Settings - Photos (photos) and disabling the Hidden Album option.

5. Share location via SMS

First, open the Message app and choose any conversation. Next, users just need to click on the avatar of the person talking and choose Info, at which point you will have two options: Send My Current Location (send current location information) and Share My Location (share my location).

6. Review all the places you have passed

Your iPhone will record every place you visit, and this data will be deleted if you reset your iPhone.

To see the full location history on your device, go to Settings - Privacy - Location services - System Services - Significant location - Significant location important intelligence).
