Some criteria to choose the best gaming mouse

To choose a **good gaming mouse** , you need to rely on the following criteria:

1. Mouse form

Mouse form is the first factor that affects the quality of a gaming mouse. Accordingly, users will feel comfortable, not too tired and operate accurately if they choose a suitable mouse form.

If you have large hands, consider and choose a large sized computer mouse to have the best experience without worrying about having empty hands. On the contrary, if you have small hands, you should use a mid-range mouse form, not too bulky to help grip effectively.

Depending on each gamer, there are different options for the location of the buttons. The mouse has an extra button if you are used to using the extra button for faster operations. If not, you should use a good computer mouse that has a simple design with 2 buttons and 1 pointer without being encumbered by any details.

Picture 10 of Top 9 best gaming mice worth buying in 2023

2. DPI

The next criterion to help you choose a good computer mouse to experience all games is **DPI** . This will be an important parameter to make games more attractive with high DPI speeds.

Depending on the needs, users choose the appropriate DPI sensitivity. The more sensitive the mouse, the better the quality. Accordingly, gamers should choose a mouse with a level of 2000 DPI or higher to help you move easily and your games will be complete.

3. Sensors

The sensor in a computer mouse demonstrates precision to help the mouse move smoothly. If you have a good sensor, it will provide accurate sighting. Whether mouse operation is accurate or not depends greatly on the sensor level of the computer mouse.

Currently, there are many brands focusing on developing and focusing on mouse sensors. Brand names like Logitech, Truemove or Pixart are also suggestions worth considering.
