

# Top app makes you safer when driving

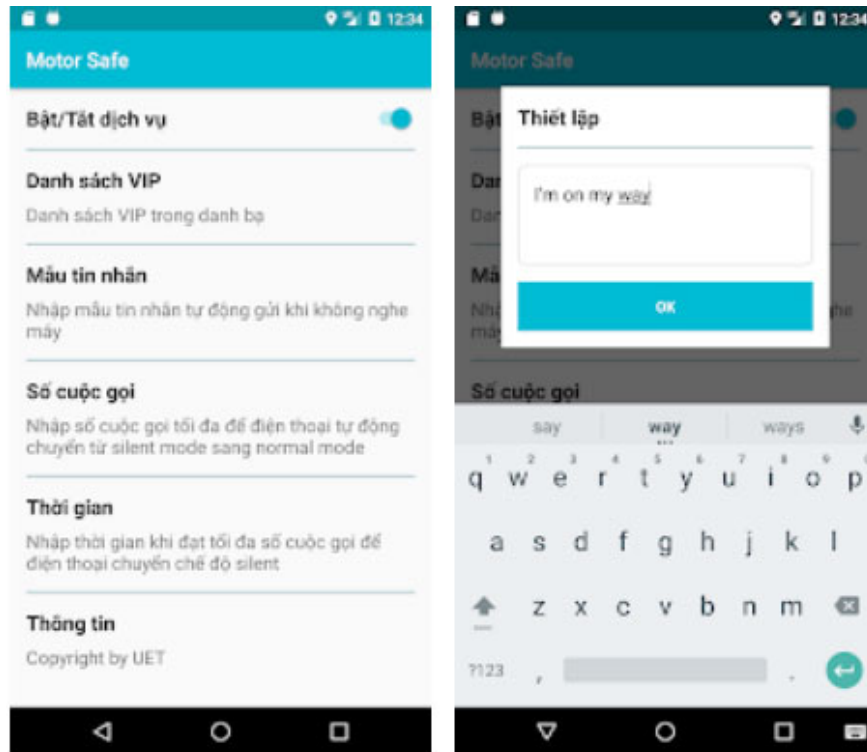

If you are a frequent traveler on the street, adding the software below will help you feel more secure when participating in traffic control on the road.

If you are a frequent traveler on the street, adding the software below will help you feel more secure when participating in traffic control on the road. These applications are an excellent support tool so you can easily find your way, avoid congestion, safer driving and many other benefits.

1. Warning application and search for flood points on the phone
2. Accurate weather forecast applications on the phone
3. Vadi: Vietnamese application of traffic map and newspaper

## 1. Motor Safe

Motor Safe is an application that helps drivers of vehicles do not lose focus when driving, thereby minimizing risks and accidents that may occur on the road. Motor Safe's operation method is based on the sensors available, specifically when detecting that the user is operating a motorbike, the application will automatically switch the phone to silent mode. Conversely, the application will return to normal mode if it detects that you have stopped or no longer moved.

Motor Safe's interface is quite simple, the main features include:

**VIP List:** This section allows you to add phone numbers of important relatives and friends, . when a call comes from them, the phone will still ring even when you are driving.

**Message templates:** Automatically send messages to callers to let them know you are driving.

**Call number:** This feature automatically detects emergency calls (continuous calling within 3-5 minutes) and switches to normal mode (emits a bell instead of silence).

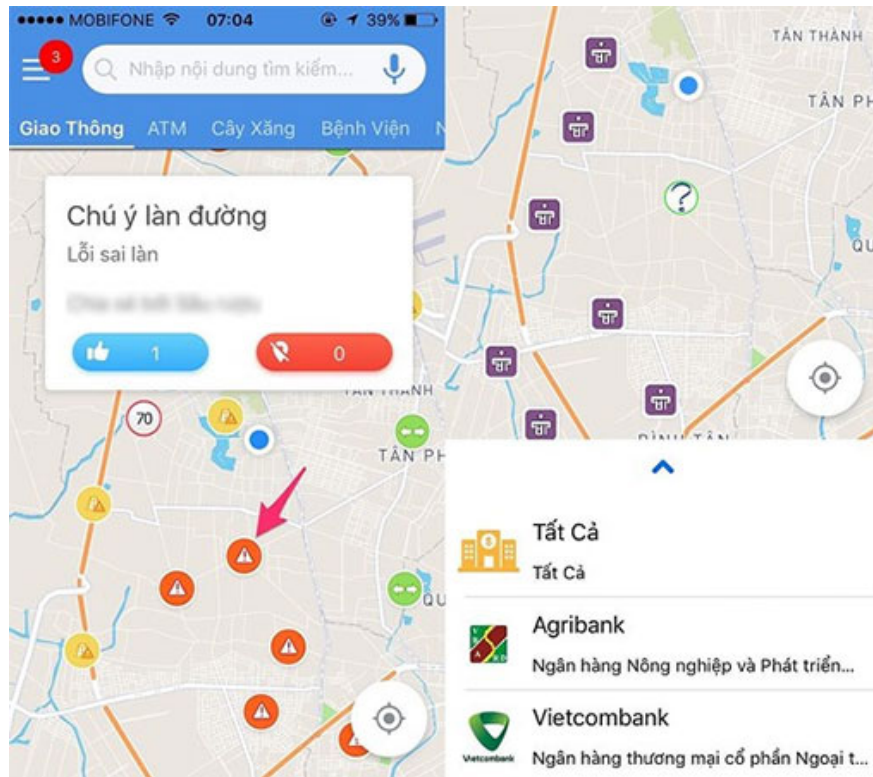

**Speed ??threshold:** In case you speed up already set, your phone will vibrate to warn you to slow down to ensure safety.

**Accident warning:** Motor Safe has the ability to determine the location when a user participates in a traffic accident, then sends the location information to a relative (VIP list) for timely assistance.

## 2. Goong

The useful application when driving next is Goong. Basically, it provides early warnings about traffic conditions (congestion, congestion, speed limit roads, etc.) so you can change the route accordingly. It is known that Goong can display 355,226 km of roads and 842,323 locations in 63 provinces and cities across the country.

Besides, the application also displays traffic alerts to help you move safely, saving time and costs. At the same time, you can also share the location of accidents, traffic jams so others can avoid.

And yet, using Goong you can easily find locations of ATMs, gas stations, pharmacies, repair points and hospitals with high accuracy. Just click on the search box so you can find your way and get directions by voice (Vietnamese).

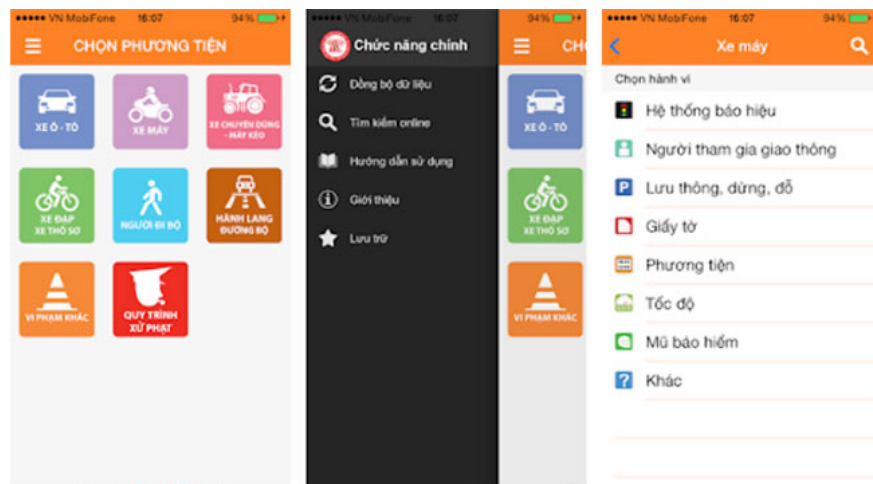

**Download:** Goong for Android

**Download:** Goong for iOS

### 3. iTong

iThong is the last software that we want to introduce, this is the application to look up the level of traffic violation sanction, the penalty process of traffic police according to the law. If you accidentally violate traffic and get penalized, use iTong to look up the information and the corresponding penalty.

In general, iTong provides quite a lot of information about common faults on the road such as red light, paperless, speeding, etc., along with the penalty.

We have just come up with a number of applications to help reduce accidents caused by phone use, avoid congestion paths and easily look up common regulations. If you feel the application is suitable and necessary for yourself, please download and use it!

**Download:** iTong for Android

**Download:** iTong for iOS
