

TOP best computer operating systems 2022

Surely everyone has heard of the term operating system, but not everyone understands what an operating system is. In this article, let's find out the best operating systems available today, suitable for different uses.

An operating system is system software that manages a computer's components, including hardware and software, and provides general services to computer programs. The operating system plays an important role, and without it the computer would not be able to function.

TOP of the best operating systems today

MS – Windows

Without a doubt, Windows is undoubtedly the most famous and familiar operating system for many computer people. From Windows 95, up to Windows 11, it has been the most popular operating system, driving computer systems around the world.

Windows is user-friendly, quick to start and up and running. The latest versions add built-in security features to keep users and their data safe.

Windows is suitable for any user needs such as gaming, web browsing, applications, personal activities,. Modern security system, convenient user interface regardless of the device you are using , so the only limitation of Windows is probably its price.

Mac OS

Mac OS is essential to Apple devices. For Apple users, there is no other option except Mac OS. It has evolved over time to include the features that first and foremost define innovation.

When using Mac OS, users can enjoy exclusive Apple applications, setting dynamic wallpapers that transition the scene of the day like the real time sunrise and sunset.

In recent years, Mac OS has been completely free and upgraded regularly. The biggest achievement of Mac OS is its beautiful and modern interface and design. It is probably one of the most beautiful operating systems available today.

Ubuntu

Ubuntu is a Linux-based operating system, suitable for downloading open source codes, running applications, browsers and games.

It's perfect for organizations, schools and home use, free to download, use and share. Ubuntu comes with built-in firewall and antivirus protection, making it the most secure operating system.

It works and is compatible with all the latest laptops, desktops and touch screen devices.

Fedora

Fedora is also a Linux-based system that powers Ubuntu's open source features. Fedora is reliable, user-friendly, and makes a powerful operating system for any laptop and desktop computer.

While also suitable for personal use, Fedora works best for developers in an enterprise environment. It has all the tools and utilities one needs to work on projects.

Chrome OS

Chrome OS is another operating system based on the Linux kernel, designed by Google. Since it is derived from the free Chromium OS, it uses the Google Chrome web browser as the main user interface. This operating system mainly supports web applications.

It has a built-in media player that allows users to play music, view photos and handle other files while offline.

Chrome OS is designed to be compatible with all Android apps, being able to run Linux apps.

Chrome OS is a well-run operating system, but there's still a lot to look forward to as to what it can bring in the future.
