NFT games use technology in their game mechanics, providing a completely unique experience, as well as a way to monetize in-game items for players and developers.

NFT (non-fungible token) is an exciting and promising new area for cryptocurrencies and games. Here are the TOP of today's top NFT games, with various genres combined.

Axie Infinity is a Pokémon-inspired NFT game developed on the Ethereum blockchain. It includes millions of adorable creatures called Axies, which players can collect, raise, battle, and trade as digital pets.

Players can receive rewards in the form of SLP (Smooth Love Potion) tokens earned in the game. SLP tokens can be exchanged for other Ethereum tokens on exchanges like UniSwap or Binance.

Axie Infinity is arguably one of the best designed crypto projects. Everything from the user experience to the combination of tokens and economics is carefully developed and implemented.

Since tokens are verifiable assets in Ethereum, all players own them. An example of an NFT card like Griffith, The Chosen, was sold for \$12k in May 2021.

With the recently launched marketplace and more ways than ever to trade cards, Gods Unchained seems to be the leading provider of card game trading. Gods Unchained will run on Immutable X and will offer gas-free transactions on its marketplace.

Battle of Guardians is a real-time multiplayer NFT arena, developed on the Unreal Engine. This is an advanced fighting game based on Solana in which the player continuously fights, defeating other opponents for additional rewards.

It allows players to benefit from the power of blockchain, along with unparalleled graphics. Here, players can participate in fierce multi-kingdom battles in many different regions in the vast SciFi game world.
