

# Top smartphone owns the best selfie camera

Finally DxOMark, France's prestigious smartphone camera review site, also scored and published a smartphone selfie camera ranking. Previously, this site only tested and ranked the rear camera of devices.

Finally DxOMark, France's prestigious smartphone camera review site, also scored and published a smartphone selfie camera ranking. Previously, this site only tested and ranked the rear camera of devices.

Compared to the main camera, most selfie cameras are of poorer quality and less interested in testing. DXOMark has added a number of selfie camera test sets to evaluate, rate and cover the quality of all front camera sensors. This will help users know the quality of selfie cameras on their smartphones.

DXOMark scores for selfie cameras according to an objective data collection of tested contexts (more than 45 contexts in different conditions) and charts. Each smartphone will have to take more than 1,500 photos, more than 2 hours of video recording . with about 2 weeks for a test.

The selfie charts and scores will be published on the DXOMark website, along with the main camera point.

Currently, according to DxOMark, smartphone has the best selfie camera is now Pixel 3 with 92 points. The next position in turn is Samsung's Galaxy Note 9 (92 points), Mi MIX 3 of Xiaomi (84 points), Apple's XS Max (82 points).
