

Top-3 Android Apps for Your Kid's Safety

You can add a bunch of apps to your child's Android smartphone to keep them safe in both the digital and real worlds. You can also track your child's Android phone activity to keep them safe. safe.

In today's highly digitalized world, it seems that everyone carries a smartphone, including children. If you give your kids a smartphone, you can also use it to keep them safe and teach them safety lessons or even track their current location to make sure they are. keep away from danger of harm.

In today's post, I will list 3 safe Android apps for kids that will surely be able to keep them safe from various threats.

1. Kaspersky SafeKids

Smartphones are a big responsibility, and as a parent, you will want to make sure your kids don't stray with their device. Leading cybersecurity Kaspersky provides a way **how to spy on some people's phones**, and is very reliable for your child's smartphones.

Just install the app on your child's phone and you'll be able to control it from a dedicated dashboard. This includes the apps and websites they can access and for how long.

Once installed, the app will ask you to generate a pin. This battery will be used for securing unauthorized access to apps. Once indoors, you can follow step-by-step instructions for installing Kaspersky SafeKids on your child's specific device.

The app makes it easy for parents to identify rules and prevent actions against the rules. Also, whenever your kid tries to access anything that is restricted or goes over device usage limits, you'll get a notification.

With the free version, it works as a parental control app, but you can get even more safety features with an \$ 16.99 annual subscription. This includes tracking your child's location, call and SMS logs, alerts to your email and phone, and detailed reporting on app and internet usage.

2. FamilyTime Premium

FamilyTime Premium can easily be called a single hub for parental control. While you can find other apps that handle each function individually, FamilyTime Premium's advantage is that it allows parents to do it all from one user-friendly app, even if you have the type. device is different from your child's.

FamilyTime offers a free 3-day trial of Premium followed by an annual subscription, depending on how many devices your family needs to keep track of (unlimited parental devices). Annual prices range from \$ 27 for 1 sub device to \$ 69 for 5 sub-devices. FamilyTime also offers a free version with fewer features.

FamilyTime's premium features:

1. Location **phone tracking** with GPS support - see your child's location on the map at any time
2. Geolocation - set location parameters and be notified if they leave the location
3. Text message monitoring - monitor incoming and outgoing messages
4. Call monitoring - view the contact list, call records and set blacklist options
5. Internet monitoring - view internet history and block web pages, photos or videos
6. Monitor screen time - set a schedule for the allowed screen time

3. mSpy

You want to **track your child's phone**, want to see who they talk to every day, who they text or how much time they spend using social networks... With mSpy you can do this.

mSpy is an application designed to monitor mobile phones, tablets or PC / Mac. Once installed, the application allows users to view call logs , **read text messages from another phone** and view browsing history, GPS location, multimedia files (photos and videos), instant messages and several other popular social networking apps on the target device.

Through your web-based dashboard, you can safely view all of this information without the user's knowledge. This dashboard is available on PC or mobile device.

mSpy is used for many different purposes. Some users use the app to check and track a child's devices, see what they do, what websites they visit.

Monitoring And Limiting The Way Children Use A Cell Phone.

mSpy gives users the ability to monitor the websites their kids visit, who they talk to every day and when they talk, who they message and who they connect to via social media. . In addition, the application also allows you to track your phone location to find your phone in case you are lost.

Employee Tracking.

Let's say you are on a project and want to find reliable employees, but sometimes you suspect they are not performing well. Of course, if you are a business owner you will be held accountable for your behavior.

With mSpy you can monitor and monitor to make sure your employees are working on time, accessing websites. Also you can track how much time they spend on their mobile devices during business hours each day. You can even monitor any websites they visit from their devices to make sure your employees don't do anything that would damage the company's reputation.

Track Your Lover.

No one wants to keep track of where your spouse or the person you text is, but sometimes you don't have much choice.

MSPy's dashboard allows you to see their exact location 24/7. You can monitor and track who they text, who they call and when, and who they talk to on social networking apps.

Some Key Features Of MSPy

In addition to the basic features such as tracking, monitoring SMS, call log, email, tracking browsing history... mSpy also offers a number of other useful enhancements, including:

1. **Messenger service monitoring:** track all activities on WhatsApp, Viber, Skype, Snapchat, iMessage (iPhone only), Telegram, Tinder, Line, Hangouts and Facebook Messenger. You can view messages, chats, images and videos shared on these platforms. The program can track many social networking applications as well as messaging applications.
2. **GPS Tracking and Geo-fencing :** like most other tracking apps, with mSpy you can also track the location of your phone's movement at any time using GPS. The biggest difference of mySpy is that it offers geo-fencing, you can set up alerts and the app will notify you in case if the tracking device leaves the set area or goes into the setting. create.
3. **Call barring:** You can select any phone number and block incoming calls from that number.
4. **Website Blocking :** Block access to predefined websites. Undeniably mySpy is a great tool for parents to block their kids from accessing websites with unhealthy content.
5. **Tracking anonymous browsing history :** The app also allows users to track browsing history even when the other person is browsing the web in incognito mode, and does not require rooted Android device.
6. **Block apps :** You can view all the apps installed on the target phone and select the apps to block.
7. **Keylogger :** Only available on mSpy. The Keylogger feature can report to the user what the other person enters on the target device: message, password, login details and email. This feature is available on both Android and iOS (iPhone / iPad) apps.
8. **Wi-Fi networks :** Show details of any Wi-Fi networks accessed by the target device, public or private Wi-Fi networks.
9. **Management Features :** mSpy has several ways to manage report setup. You can set the report to be sent to the console via Wi-Fi, by any connection or not. This is to avoid losing money when using a mobile data plan to send data. In addition you can also set up time reporting and GPS.
10. **App uninstall warning :** You'll get a warning if the app is uninstalled or compromised in some way.
11. **Security features :** Phone lock, phone data erase, SIM change notification, open, pause or delete apps - all in the online dashboard.

How Does MSPy Work?

mSpy must be installed on the target device of your choice. Once installed, you can choose whether to hide the app icon or not. This leaves the other user unaware of the software installed on his or her device.

Once installed on the target device, mSpy has access to everything on your phone or tablet. The application collects the data and sends it to the online dashboard for you. Here you can view information such as SMS, call log, contact details.

mSpy uses your phone's Internet connection (Wi-Fi or 3G / 4G / 5G) to send all the data to your dashboard. This means that the target devices must be connected to the Internet.

How to install mSpy app on Android phone?

Visit mSpy application website and create an account or try the demo here. After creating your account, there are two subscription options for you to choose from to follow. Each plan comes with different features and prices. Check the plan with the features you need, choose the plan and pay.
