

# **TOR, the super-secure browser officially has a mobile version**

TOR is a highly secure browser and a tool used by many users to explore the Deep Web. And recently, this browser has officially been available for Android devices.

TOR is a highly secure browser and a tool used by many users to explore the Deep Web. And recently, this browser has officially been available for Android devices.

Similar to the TOR version for computers, the Android version is still developed in alpha stage, security features have been improved to achieve the highest level of performance. The most prominent is Orbot, the proxy application is required to use the TOR browser to connect to TOR network.

The TOR browser on Android OS is also equipped with anti-tracking and monitoring features on websites.

## Snub trackers and snoopers.

Tor Browser isolates traffic for each domain you visit. That means trackers and advertisers can't follow you. And any information storage such as isolated cookies or browser history are deleted after your session. These modifications

In addition, TOR is multi-layer encrypted and allows users to anonymously completely use it. According to the developer, it is extremely difficult for users to browse the web with the TOR browser.

According to developer information, the TOR browser will not have a version for the iOS operating system. Currently, the Android version is still in beta and users may experience bugs when using it. If you are not

interested in that and want to experience the TOR browser on Android devices right away, users can access the Google Play Store app store or go to the official website of TOR Project to download.
