

Toshiba 500GB hard drive laptop costs 9.7 million

The Satellite C640 features a hard drive of up to 500 GB with Intel Core i processor while the resale price is less than VND 10 million.

The Satellite C640 features a hard drive of up to 500 GB with Intel Core i processor while the resale price is less than VND 10 million.

Storage capacity of Satellite C640-1082U is even higher than other laptop models of over 10 million VND and higher than the current average of 320 GB.

The new version is distributed in the domestic market using Intel Core i3-380M processor speed of up to 2.53 GHz, RAM memory of the latest 2 GB DDR3, integrated graphics chip Intel HD Graphics for the ability to handle all office applications, surf the web, watch HD movies or even use software like Photoshop and Auto Cad.

Although located in the low-cost segment, the C640 has design lines that make the difference from other products in the same line. With the use of embossed crust instead of glossy plastic, it makes the machine look more and especially easy to keep clean, without fingerprints.

In addition, the chassis is also firmly designed to withstand some common bumps and vibrations. The manufacturer also put an additional exhaust fan on the lower side in combination with the heat sink on the side to increase the heat escape capacity, making sure the machine stays cool.

Satellite C640-1082U uses 14-inch screen resolution of 1366 x 768 pixels HD standard 16: 9 ratio and Toshiba's Clear SuperView technology, for sharp and brilliant images. Machine weighing only about 2.1 kg helps users easily carry people without much difficulty.

In addition, Satellite C640-1082U is also fully equipped with high-speed connections like 10 / 100Mbps LAN, Wi-Fi standard n, USB 2.0, front webcam as well as an optimized stereo speaker system for personal entertainment. . The device comes with a 6-cell battery for continuous use of about 3 hours.
